HOGS AND PIGS -- FINAL ESTIMATES FOR 1979-82. Crop Reporting Board, Statistical Reporting Service, U.S. Department of Agriculture. Statistical Bulletin No. 716.

Abstract

This publication presents final hog and pig estimates, including some revisions, made by the Crop Reporting Board for the period 1979-82 and continues the official series published in Statistical Bulletin No. 648, issued December 1980. This series includes annual and quarterly estimates for inventory, sows farrowed, pig crops, number of operations with hogs, and value of the inventory on December 1 of those years. Estimates contained in this publication provide a historic record and a benchmark for current estimates.

INTRODUCTION

Hog and Pig estimates were published on a current basis during 1979-82 in quarterly and annual reports. Primary data used in setting the current hog estimates were obtained from producers by probability surveys. Survey samples included all known extremely large producers and a sample of smaller producers. Information was collected by mail, telephone, and personal interviews. Since all operations with hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about 2 percent at the U.S. level for the hog inventory. This means that chances are approximately 95 out of 100 that a survey estimate will be within 4 percent of the complete coverage value if the same procedures are used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, errors in recording and processing the data, and mistakes in reporting. These problems cannot be measured directly, but are minimized through rigid quality controls during the data collection process, and a careful review of all reported data for consistency and reasonableness. Lists of hog producers are updated annually in each State prior to sampling.

The Crop Reporting Board (CRB) also constructs a U.S. balance sheet for an additional check on inventory estimates. The balance sheet uses the prior inventory estimate adjusted for survey estimates of births and deaths, and reliable check data from other sources on slaughter, imports, and exports.

Revisions were made only after a thorough review of the original data, with consideration given to all additional data now available, including the 1982 Census of Agriculture. At the national level, revisions of estimates for all hogs and pigs, and sows farrowing were negligible for 1979-81. For 1982, some revisions amounted to more than one percent. Most of these revisions were in the major hog-producing States. Minor changes were made in a few of the less important hog-producing States. However, these changes had no significant effect on the national totals.

For States with fewer than 10,000 hogs or 10,000 sows farrowed, the estimates were rounded to the nearest 100 head. For all other States, estimates of inventories, sows farrowing, and pig crops were rounded to the nearest 1,000 head.

The estimates of average value per head were based on CRB crop and livestock reporters' estimates of the December 1 average price per head in their localities. Values per head, by classes for each State were weighted together by the estimated number in each class to provide a basis for the estimated value per head. For the United States, the total value is the sum of the State estimates; and value per head is derived by dividing the total value by the total number of head for the United States.

The following changes in the data series occurred during the 1979-82 period:

1. Beginning with June 1, 1982, coverage in the June Hogs and Pigs Report was reduced from 23 States to 10 States plus a composite estimate for 40 other States and the U.S. total.

2. Beginning with September 1, 1982, coverage of the September and March reports was reduced from 14 to 10 States.
