Agricultural Imports Continue Lower In July - February

Selected Prices of International Significance

U.S. Export Unit Values of Selected Commodities To Major Markets

Agricultural Export Value Down 2 Percent in July - February

ECONOMIC RESEARCH SERVICE ● U.S. DEPARTMENT OF AGRICULTURE

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than $251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at $251-$999 are included on the basis of sampling estimates; shipments to Canada valued at $251-$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than $251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.

FOREIGN AGRICULTURAL TRADE
OF THE UNITED STATES

Digest

U.S. Food Aid Programs in Latin America and Their Relation to Commercial Trade (see p. 5). Agricultural exports under Government-financed programs to Latin America totaled $2.4 billion during fiscal years 1955-75, 9 percent of total U.S. agricultural commodity aid. Generally, since the mid-1960's, P.L. 480 Title I sales have declined while Title II donations have remained fairly steady. Wheat was the principal P.L. 480 export to Latin America, with 60 percent shipped to Brazil. Commercial exports of wheat to the region have risen considerably while P.L. 480 sales have declined. During the 1956-70 period, low foreign exchange reserves limited the amount the recipient countries could purchase commercially. As their financial reserves rose in the late 1960's, increases occurred in their commercial imports from the United States and other suppliers.

* * * * * *

U.S. Agricultural Imports From 50 Major Sources, 1970-75 (see p. 24). Brazil was again our major supplier of agricultural imports in 1975, but other sources shifted somewhat because of changes in export availabilities. Previously second-ranked, the Philippines dropped to sixth place, and Mexico slipped to fourth position. Australia and the Dominican Republic moved up to second and third place, respectively. The 50 leading sources provided 92 percent of the total farm product import value.

* * * * * *

Agricultural Imports Continue Lower In July-February (see p. 46). The value of farm product imports, at $6.38 billion, was nearly 3 percent below those during similar months in 1974/75. Reduced inflows of sugar and lower prices for vegetable oils accounted for much of the decline. Competitive agricultural items were 13 percent below the year-earlier value, but a sharp increase in the value of noncompetitive imports almost offset that reduction.

* * * * * *

Selected Prices of International Significance (see p. 60). International prices continued to strengthen during February. Export prices for U.S. wheat, corn, soybeans, soybean meal, cotton, and import prices for cow meat, coffee, cocoa beans, and rubber were higher than they were in January. International prices for wheat, corn, sorghum, rice, soybeans, sugar, and cocoa beans, however, were lower than they were in February 1975.

* * * * * *

U.S. Export Unit Values Of Selected Commodities To Major Markets (see p. 64). The unit values of U.S. wheat, corn, and soybeans exported to the EC, Japan, the USSR, and India are reviewed for the months January 1972-December 1975 to show that from time to time, unit values of U.S. agricultural exports to these markets were significantly different from the average export unit value of U.S. wheat, corn, and soybeans to all foreign destinations.

* * * * * *

Agricultural Export Value Down 2 Percent in July-February (see p. 73). U.S. farm product exports amounted to $14.67 billion during the first 8 months of fiscal 1976, compared with $15 billion a year earlier. Most of the decline was due to lower prices, since volume for the major commodities was up 10.4 million tons to total 71.5 million tons. February agricultural exports were 11 percent below the year-earlier value, but up 7 percent in volume.

U.S. FOOD AID PROGRAMS IN LATIN AMERICA AND THEIR RELATION TO COMMERCIAL TRADE

by
Robert L. Tontz, Susan A. Libbin, and Louise E. Stanton*

The U.S. Food for Peace Program, carried out largely under Public Law 480, has been the primary means of supplying U.S. food aid abroad. Such aid to Latin America totaled $2.4 billion during fiscal years 1955-75 (table 1), accounting for 9 percent of the total $26.9 billion in farm commodities shipped to all countries under U.S. Government programs. Food aid accounted for about 13 percent of all U.S. economic assistance provided to Latin America from 1955 to 1974. Although other developed (OCED) countries also sent food aid abroad, that to Latin America was provided almost entirely by the United States. 1/

Principal Recipient Countries

U.S. Government-financed exports have gone to most Latin American countries (table 2). Brazil, with a population accounting for about one-third of the 319 million people in Latin America in 1975, received slightly over one-third of all Government program exports to the region during the fiscal 1955-75 period. Five other countries (Colombia, Chile, the Dominican Republic, Bolivia, and Peru), accounting for 19 percent of the Latin American population, received most of the remainder. Food aid accounted for almost two-fifths of all U.S. economic aid to Brazil during 1962-65, the principal years of food aid. On a per capita basis, the largest program exports went to Chile, Bolivia, the Dominican Republic, and Uruguay. The smallest went to Argentina, Barbados, Cuba, Mexico, and Venezuela (Barbados was a British dependency through 1966, and Cuba broke off relations with the United States in the early 1960's).

P.L. 480 Sales and Donations Programs

During the fiscal 1955-75 period, slightly over half of all Government program exports to Latin America were Title I sales, mainly payable in local currencies during the first 12 years and in long-term dollar credits during the next 9 years. Title I exports increased until 1965, and then began to decline, partly because of the increased financial ability of recipients to buy food commercially and, in recent years, the lower availabilities and higher prices of U.S. food supplies.

3/ Includes Mexico, Caribbean, Cuba, Central America, and South America.

Wheat was the principal commodity exported under Government programs to Latin America during fiscal years 1956-75, accounting for 45 percent of the Government program value total (table 3). Other major commodities were nonfat dry milk, vegetable oils and waxes, wheat flour, feed grains, and blended food products. Almost all the wheat, over half the feed grains, and slightly over two-fifths of the vegetable oils moved under P.L. 480 Title I programs. The other major commodities were shipped mainly under Title II donation programs. Wheat accounted for almost three-fourths of all Title I exports during fiscal years 1956-75, followed by soybean oil, feed grains, cotton, tobacco, and rice.

Title II donations of food increased between fiscal 1955 and 1963; over the next 12 years they remained fairly steady and for most of the latter period accounted for approximately one-half of all Government program exports to Latin America (fig. 1). About three-fourths of the Title II exports were donated by voluntary agencies, such as CARE and the Catholic Relief Service; the remainder was donated by Government and international agencies (such as the World Food Program).

Principal commodities donated included nonfat dry milk, accounting for 38 percent of all Title II shipments during fiscal years 1956-75; wheat flour; soybean oil; corn and cornmeal; bulgar; rolled wheat and oats; and blended high-protein foods (corn soya milk and wheat soya). Fortified high-protein products which are relatively inexpensive have been developed. For example, corn soya milk has the same nutritional value as nonfat dry milk, but it is much lower priced and has become valuable with the shortage of U.S. milk supplies in recent years.

While Title I commodities have not been designated for any specific population group prior to shipment, Title II aid has been specifically allocated to needy groups. These have included malnourished school children from low-income families (school lunch program), preschool children and expectant and nursing mothers, low-income unemployed or underemployed rural workers and farmers (Food-for-Work Program); and victims of disasters and emergencies (table 4).

During 1969-74, school children accounted for about two-thirds of all Latin Americans receiving Title II donations. The next largest group was preschool children and nursing and expectant mothers. Since 1973, higher priority has been given to maternal-preschool health feeding programs.

The objectives of the child and maternal feeding programs have been to reduce malnutrition among the most vulnerable population groups and to assist recipient governments in initiating, expanding, or fully operating their own feeding programs. An example of a program that sought these objectives was the Brazilian school lunch program, which was the largest U.S.-supported lunch program in the region and the second largest in the world. 2/ In 1962, the United States began helping the Brazilian Government develop an effective nationwide school lunch pro-

2/ Office of the President, Annual Report of Activities Carried Out Under Public Law 480, selected issues, 1966-73. India was the largest.

1/ Source: Annual Report on Activities Carried Out Under Public Law 480, issues for 1969-74.

gram which would provide a daily hot lunch with fortified foods rich in protein. The number of children receiving U.S. donations rose from 600,000 in 1962 to 5.7 million in 1970. Brazilian contributions to the program increased annually until 1975, when the Government assumed complete responsibility for its operation.

The Food-for-Work Program involves the use of food as partial wage payment to rural workers and farmers engaged in self-help community, agricultural, and economic development projects, such as development of road facilities, schools, health clinics, low-cost housing, and flood control, irrigation, and sewage systems; resettlement of communities in more productive areas; and bringing new or poor land into cultivation. This program also has included donations to help promote livestock and poultry production and marketing.

Commercial Exports Gain in Recipient Countries

Public Law 480 provides that precautions must be taken to assure that P.L. 480 sales do not displace usual commercial markets for U.S. agricultural commodities, nor unduly disrupt commercial trade of other countries. To implement this requirement, the United States specifies in P.L. 480, Title I agreements a level of commercial imports the recipient must maintain from the United States and other countries, based on its past level of commercial imports. The United States also maintains continual consultations with other exporting nations to implement this objective.

Since fiscal 1969, U.S. commercial exports of farm products to Latin America have increased considerably (fig. 1). In fiscal 1975, commercial sales of $2.3 billion were more than double the 1973 level and over four times higher than in 1969.

U.S. Government program exports as a share of all U.S. agricultural exports to the region fell from about one-fourth or higher during most of the 1960's to 5 percent in fiscal 1975. Since fiscal 1972, commercial exports have increased substantially to the principal P.L. 480 recipients--Brazil, Colombia, Chile, the Dominican Republic, and Peru--as well as to the traditional commercial regional buyers, Mexico and Venezuela (table 5). The five major P.L. 480 recipients took about one-fourth of the total increase in commercial agricultural exports to the region between fiscal 1972 and 1975.

Commercial exports of all the leading P.L. 480 commodities, except nonfat dry milk, increased during most of the 1966-75 period. (fig. 2). Commercial sales of nonfat dry milk to the region have always been relatively small compared with dollar exports of the other principal P.L. 480 commodities. Wheat is the major food aid commodity that could have affected commercial trade, because it accounted for the bulk of the aid shipments and over four-fifths moved under Title I programs, which are handled through regularly established marketing channels.

Wheat

In most years since fiscal 1965, U.S. commercial wheat sales to Latin America have risen, while P.L. 480 wheat sales have declined from the peak 1960-65 level. Commercial sales reached almost $1 billion in fiscal 1974, compared with $175,000 in 1972, and $43,000 in 1965. P.L. 480 wheat exports accounted for at least two-thirds of all U.S. wheat exported to the region during the first 10 years of food aid. By the late 1960's, however, the P.L. 480 share had dropped to about one-fourth and in fiscal 1975, to 8 percent.

About 60 percent of Government-financed exports of wheat to Latin America was exported to Brazil. The other major recipients were Colombia, Chile, and Peru (table 6). Commercial wheat sales to these four countries have risen sharply since 1972. The four countries accounted for about 60 percent of the total increase in U.S. commercial wheat sales to the region between fiscal 1972 and 1974.

Brazil's wheat imports have risen since the early 1950's (table 7). The leading suppliers have been the United States and until 1974, Argentina. Since the mid-1950's, U.S. wheat shipments have increased, primarily as P.L. 480 sales during the 1956-65 period and commercial sales thereafter. There were no concessional wheat sales to Brazil during 1973-75 and only a negligible amount in 1972. Brazil's commercial wheat purchases from the United States in 1975 reached a high of almost 2 million tons, compared with an annual average of 168,000 tons in 1956-59.

Until 1974, the volume of Argentina's wheat exports to Brazil was determined by the terms of a 1957 trade agreement, in which Argentina agreed to export 1 million tons annually to Brazil when its exportable surplus exceeded 3 million tons, and in other years to maintain exports as close to that level as possible. 3/ During 1974-75, Brazil's imports from Argentina dropped to less than 80,000 tons annually, mainly because of a disagreement between the two countries and Argentina's efforts to develop additional markets.

Smaller wheat suppliers to Brazil have been Canada, Uruguay, and the USSR. Shortages of supplies have mainly affected the latter two countries' trade with Brazil. Brazil's limited foreign exchange reserves during most of the fifties and sixties contributed to the reduction of its imports from Canada. Improved foreign exchange conditions have enabled Brazil to substantially increase its imports from Canada since 1970.

Colombia's wheat imports have increased since the mid-1950's. (table 8). The United States has been almost the sole supplier. P.L. 480 wheat accounted for over half of the imports from the United States during the 1956-65 period. Since

1/ 1950-62 from Dale Adams, et. al., Public Law 480 and Colombia's Economic Development, Medillin, Colombia, (March 1964); 1963-70 from Agricultural Trade of the Western Hemisphere, ERS Statistical Bulletin 546, July 1975; and 1971-74 from selected attache reports of the Foreign Agricultural Service, U.S. Department of Agriculture.

2/ Represents P.L. 480 and Mutual Security/AID exports on fiscal years; may exceed U.S. total due to differences in reporting.

then, U.S. commercial sales have increased, reaching 344,000 tons in 1974, compared with 64,000 tons in 1965. During the last 10 years, commercial sales were at least two-thirds of Colombia's wheat purchases from the United States.

In the 1950-55 period, Canada was also a principal wheat supplier. Colombia's scarcity of foreign exchange reserves limited the amount it could purchase commercially during the late 1950's and 1960's. 4/ Colombia was an insignificant market for Canada, taking less than 1 percent of its exports in the early fifties.

Principal suppliers of wheat to Peru have been the United States, Argentina (except for 1971-75), and, for the last 6 to 8 years, Canada and Australia (table 9). P.L. 480 provided slightly over one-fourth of the imports from the United States during 1956-64; since then, almost all have been commercial and the United States has increased its share of the market with larger dollar sales. Peru's commercial wheat imports from the United States reached 665,000 tons in 1975, compared with 341,000 tons in 1971 and 80,000 in 1965.

Argentina was the dominant supplier of wheat to Peru for most of the fifties and sixties. Peru had an agreement with Argentina to purchase a minimum of 100,000 tons annually; generally, much larger amounts were purchased. During 1972-75, Argentina ceased its exports to Peru, mainly because of expansion of markets elsewhere. The United States, Canada, and Australia increased their market shares. In 1976, Peru signed another trade agreement with Argentina to purchase 610,000 tons of wheat annually for 3 years, with 210,000 scheduled in 1976.

In 1956-66, the United States was the major wheat supplier to Chile, with a large share provided under P.L. 480 (table 10). Since then, other countries--mainly Argentina, Australia, and some European countries--have increased their shares of the Chilean market. Imports from the United States declined during 1967-72 (about two-thirds were commercial), but during the next 3 years increased to higher amounts than for any previous time. In 1973 and 1974, these imports were all commercial but in 1975, they were mostly P.L. 480 Title I dollar credit sales related to an overall economic assistance program provided to Chile.

For the 1956-69 period, P.L. 480 wheat can generally be considered an addition to, rather than a substitute for, commercial wheat from the United States and other suppliers. 5/ Foreign exchange reserves in the four main recipient countries declined or remained relatively low compared with import needs throughout most of the 1955-70 period of food aid (table 11). Thus, it is unlikely that these countries could have purchased commercially the amounts of wheat made

available on concessional terms. As the recipient countries began increasing their foreign exchange reserves in the late 1960's, they had less need for P.L. 480 wheat and were financially able to purchase greater amounts of commercial wheat from the United States or other suppliers.

Other Commodities

Government-financed exports as a share of all U.S. feed grain and product exports to Latin America generally ranged from one-fifth to 30 percent from the mid-1950's to fiscal 1970, but accounted for 5 percent or less during 1973-75 as commercial sales rose rapidly. U.S. commercial feed grain and product exports totaled over $500 million in fiscal 1975, compared with $53 million in 1971. Most of the increase went to Mexico and Venezuela, recipients of small P.L. 480 feed grain shipments prior to the mid-1960's. U.S. commercial sales, however, also rose considerably to Colombia, Peru, and Chile, recipients of small quantities of P.L. 480 feed grain and product exports in various years since the late 1950's. Of the latter three countries, the largest increase occurred in Peru, where commercial exports reached $47 million in 1975, compared with $4 million in 1972. 6/

In recent years, U.S. commercial exports of vegetable oils to Latin America have risen sharply. Most of the increase went to Mexico and Venezuela, the regular commercial markets for the United States in the region. However, commercial sales have also risen to Chile and Peru, importers of small quantities of P.L. 480 vegetable oils annually since 1960. U.S. commercial sales to Peru totaled $30 million in fiscal 1975, compared with $4 million in 1970. 7/

U.S. food aid will be needed in Latin America in the future to help meet disasters and emergencies, such as the recent Guatemalan catastrophe. It will also be needed to meet the often neglected chronic nutritional deficiencies of vulnerable, low-income groups, particularly children and expectant and nursing mothers, and to help meet any severe shortfalls in domestic production. Further consideration should be given to holding contingency stocks by donors and recipients in order to provide food aid in the shortest possible time during periods of crisis.

SPECIAL in this issue

U.S. AGRICULTURAL IMPORTS FROM 50 MAJOR SOURCES, 1970-75

Imports dropped slightly to $9.33 billion in 1975 after four successive annual increases. While Brazil remained the largest single country supplier by a wide margin, the rank of other sources shifted somewhat. The Philippines dropped to sixth place from second place in 1974, and Mexico slipped to fourth largest from third. Australia moved up to second place from fourth and the Dominican Republic to third from sixth position. Changes in sugar export and import patterns accounted for a substantial part of these shifts. The Dominican Republic became the largest source of sugar in 1975 because the Philippines and Mexico shipped less. Australia, Taiwan, and India also shipped more in value terms.

Competitive items, which made up two-thirds of total agricultural imports last year, came chiefly from Australia, the Dominican Republic, the Philippines, Canada, and Mexico. Noncompetitive commodities--mostly tropical products--were primarily from Brazil, Colombia, and Indonesia.

Table 15 shows import values of 16 commodity groups from 50 countries over the last 5 years. Volume for 10 leading commodity groups by country of origin appears in table 15. The value series includes countries supplying over $33 million worth in 1975. These 50 countries accounted for 92 percent of U.S. agricultural imports. A value series for total agricultural imports from all sources is shown in table 14.

CONTINUED--

Import Highlights

AGRICULTURAL IMPORTS CONTINUE LOWER IN JULY-FEBRUARY

Imported agricultural products in July-February amounted to $6.38 billion, about 3 percent less than in comparable months a year earlier. Most of the decline was due to reduced purchases of sugar and lower prices for vegetable oils. Competitive farm product imports dropped 13 percent in value to nearly $4.1 billion. At the same time, noncompetitive agricultural commodity imports grew 23 percent to $2.3 billion, with higher coffee prices accounting for much of the gain.

Cattle and meat entries for the 8-month period ended February 29, 1976, were up 20 percent from their year-earlier value. Imports of cattle and calves more than quadrupled to 445,000 head because of larger slaughter and feeder cattle entries from Canada and Mexico. Restrictions on Canadian cattle in effect during 1974/75 were removed in August 1975. Beef and veal entries totaled 904 million pounds, up 10 percent from similar months in 1974/75. Frozen boneless beef accounted for 776 million pounds or 86 percent of the total. Australia, Nicaragua, Honduras, Canada, and Mexico shipped most of the additional boneless beef. Canned and prepared beef imports from Brazil and Argentina also advanced.

Cattle hide imports, nearly tripling the year-earlier level, totaled almost 45 million units; nearly all of them were from Canada. Dutiable wool purchases were more than double those in July-February 1974/75.

Total fruit imports declined somewhat in July-February, primarily because of fewer strawberry entries. An unusual series of frosts in Mexico's growing areas reduced output and exportable supplies. Fresh winter vegetable imports advanced nearly one-third to $76 million, with heavier inflows from Mexico of tomatoes, cucumbers, peppers, and other types.

Sugar import volume through February, at 2.8 million tons, was 15 percent below the 1974/75 level. Lower prices reduced value by 44 percent to $1 billion. Surplus supplies in many producing countries, notably the Philippines, and reduced demand resulted in sharply lower prices this year. Import patterns by origin have also changed, with larger entries from Australia, India, Thailand, South Africa, and Colombia somewhat offsetting lesser quantities from the Philippines, Brazil, and Mexico (table 16).

Vegetable oil import volume has been gaining rapidly. Palm oil entries in July-February, at 806 million pounds, were more than double the year-earlier volume.

Value rose 44 percent to $143 million. Malaysia shipped most of the palm oil, but increases were also posted in arrivals from Nigeria, the Ivory Coast, and the Philippines. Much of the 84-percent growth in coconut oil volume came from the Philippines. However, lower prices resulted in a 36-percent value decline.

Green coffee imports continued to climb in February, bringing the 8-month total volume to nearly 1.9 billion pounds or 35 percent above the corresponding period in 1974/75. Higher prices drove value up 50 percent to $1.2 billion. Most coffee exporting countries shipped more to U.S. importers, including the largest sources--Colombia, Brazil, Mexico, and Angola.

On January 1, 1976, a Generalized System of Preferences (GSP) on imports from developing countries became effective. Imports of about 250 agricultural commodities from 98 independent countries and 39 dependent territories became eligible for duty-free treatment, provided that not over $25 million or 50 percent of U.S. annual imports under each tariff heading is not exceeded by designated GSP beneficiaries. 1/

Since January 1, U.S. imports of some GSP items from the eligible countries (including Brazil, Chile, Colombia, Mexico, Panama, El Salvador, Guatemala, India, Thailand, Hong Kong, the Philippines, and Tanzania) have increased, notably canned corned beef, live plants, certain fresh vegetables (broccoli, cauliflower, cucumbers, dasheens, okra, peas) prepared fruits, refined sugar, wheat gluten, feathers, and gelatin.

1/ A Foreign Agriculture Supplement by Robert G. Harper of the Trade Negotiations Division, Foreign Agricultural Service, was published in December 1975 describing the Generalized System of Preferences in more detail.

1/ PRELIMINARY

International Price Highlights

SELECTED PRICES OF INTERNATIONAL SIGNIFICANCE

International prices continued to strengthen during February. The Dow Jones commodity spot price index rose 2 percent to 307. Export prices for U.S. wheat, corn, soybeans, soybean meal, cotton, and import prices for cow meat, coffee, cocoa beans, and rubber were higher than they were in January. However, the Dow Jones commodity spot price index, as well as international prices for wheat, corn, sorghum, rice, soybeans, sugar and cocoa beans, were lower than they were in February 1975.

Dry weather continued in western Kansas and neighboring States, boosting international wheat prices. The U.S. Gulf ports price for Hard Winter wheat (HWW) rose 6 percent to $154 a ton in February. The f.o.b. Duluth price for Dark Northern Spring (DNS) wheat and c.i.f. Rotterdam prices for HWW and DNS also strengthened.

The European Community (EC) has introduced a plan to utilize its 400,000 tons of surplus powdered skim milk by having EC livestock feed producers and feed compounders incorporate this skim milk into their feed rations. To ensure compliance with the plan, import deposits on imported vegetable proteins (such as soybean meal) will be collected starting April 1. These deposits would be refunded when the importer shows that he has incorporated powdered skim milk in his feedstuffs. News of this development strengthened demand for soybean meal, as European importers purchased soybean meal before the skim milk scheme went into effect. U.S. soybean meal was priced $164 a ton in Rotterdam in February. This scheme may have strengthened corn and soybean prices, since West European purchases of corn and soybeans increased in February.

The f.o.b. Gulf ports prices for U.S. yellow corn rose 3 percent to $116 a ton in February. The Rotterdam price for U.S. corn rose by about the same magnitude, but the Rotterdam price for Argentine corn slackened slightly. The price spread between U.S. and Rotterdam corn, at $25 a ton, was nearly twice as wide as it was a year earlier. The price spread between U.S. corn and U.S. grain sorghum in the Rotterdam market narrowed from a year earlier.

U.S. soybean prices, also continued to strengthen, reaching $180 a ton at the Gulf ports and $191 a ton at Rotterdam. Brazilian soybeans were quoted at $194 a ton, after several months of no quotations.

In northern Europe, U.S. cotton, at 71.44 cents a pound, was priced at the same level as in January because of two opposing market forces. In mid-February increased demand by Far Eastern countries, including Japan and Taiwan strengthened cotton prices. The dampening force on cotton prices occurred in the futures market of the New York Cotton Exchange. Stocks certified for delivery against the No. 2 contract (for March delivery) and stored in exchange-approved warehouses have been building steadily, prompting selling of futures contracts.

The Thai rice price continued to fall, reaching $253 a ton, in response to the large 1975 world harvest.

Among imports, prices for cow meat continued to strengthen in accordance with domestic U.S. beef prices.

Coffee prices continue to climb, having reached $1.09 a pound in the New York spot market. According to the Wall Street Journal (Feb. 23), "Frosts, floods, drought, and an earthquake since last July have damaged crops and disrupted transportation, reducing the supply of beans at least through 1977." The world coffee harvest in 1975/76 is now estimated at 71.6 million bags, 10 percent less than last year's harvest. Brazil, Guatemala, El Salvador, and Mexico have reduced coffee crops.

Through February, raw sugar prices dropped slightly from the January level, with the New York spot price for raw cane sugar reaching 15.04 cents a pound. The Caribbean ports price for raw cane sugar destined for the U.S. market was 13.66 cents a pound, .14 cents a pound higher than sugar destined for the world market. In early March, according to the C. Czarnikow Sugar Review (Mar. 11), the Soviets purchased several hundred thousand tons of sugar. A substantial tonnage of Philippine sugar was acquired. In addition, there were reports that sugar originating in India and the EC had also been secured.

Because of active international trading in rubber, the New York spot price for rubber continued to strengthen, reaching 36 cents a pound. According to the Bank of Thailand Monthly Bulletin (January), the USSR had shown an interest in buying rubber in the London market after several months' suspension. Western and Eastern Europe and China have also been actively purchasing rubber, while Japanese purchases from Malaysia and Thailand, which had been slow, also took an upturn.

Cocoa bean prices strengthened only slightly to 76 cents a pound, on the basis of speculative buying as they had in January.

U.S. EXPORT UNIT VALUES OF SELECTED COMMODITIES TO MAJOR MARKETS

by

H. Christine Collins

Since 1972, the world has experienced large fluctuations in international prices of major agricultural commodities--largely because of reduced world stocks and marked changes in foreign demand.

Overall export unit values--the mechanism for valuing U.S. agricultural exports--are indicators of the "effective" prices of these exports, reflecting the changes in international prices. U.S. export unit values of grains and soybeans to major U.S. markets--Japan, the USSR, India, and the European Community (EC)--show the price situation which characterized our major farm export commodities in these few markets, which accounted for half of the U.S. exports of the commodities.

World price fluctuations caused U.S. export unit values of grains and soybeans to these major markets to be significantly different from each other and from the overall U.S. export unit values. The differences resulted from differences in timing between date of purchase and date of export shipment and from differences in classes, grades, and quality of the commodities purchased by the individual countries. Moreover, terms of sales were sometimes combinations of P.L. 480 sales and commercial sales, causing unit values of those exports to be lower than for exports originating from commercial sales alone.

USSR

During the past 4 years, the most marked differences between the U.S. export unit value to a particular country and the unit value to all foreign destinations occurred for wheat sold to the USSR during August 1972-August 1974. When the overall U.S. export unit value of wheat began to rise, the unit value for wheat sold to the USSR remained steady at a very low level. The difference is attributed to the long duration of the export contracts with the USSR and the low price prevailing when the contracts were made. U.S. export subsidies on wheat were in effect in early 1972. Since the USSR purchased large quantities of wheat with the aid of subsidies, the U.S. unit value of

wheat exported to the USSR was stabilized at a low level until September 1974, when it was about the same as or higher than the overall U.S. export unit value for wheat.

U.S. sales contracts for the export of corn and soybeans to the USSR were also for a long duration, so from November 1972 through October 1974, the U.S. export unit values of corn and soybeans sold to the USSR were much lower than the U.S. export unit values for these commodities to other destinations.

India

India came into the world wheat market at a later time than the USSR in mid-1972 and was forced to pay high world market grain prices for nearly a year, beginning in September. By September 1972, international wheat prices had begun to soar, and U.S. P.L. 480 programs had come to a temporary halt. Since October 1973, when P.L. 480 wheat sales to India were made at low prices, the unit value of U.S. wheat exports to India has been below the overall export unit value for U.S. wheat exports.

Japan

U.S. export unit values of wheat to Japan were higher than the overall value (excluding U.S.-USSR trade) in January-August 1973, March-September 1974, and January-April 1975. During other months, the unit values of wheat sold to Japan were the same as or lower than the overall unit value. Since Japan buys U.S. wheat on short-term contracts of only 1 to 3 months forward shipments, U.S. export unit values to Japan react to U.S. market prices faster than do overall U.S. export unit values.

Japan, which is heavily dependent on food imports, reached a trying situation in 1973, when the United States put a temporary ban on soybeans and soybean products. This situation probably set the stage for Japan's occasional long-term contracts in soybeans and wheat whenever the international food situation appeared to be getting tight. In late 1974, Japan bought wheat at extremely high prices. This wheat was being shipped to Japan for several months after international wheat prices began to fall. The fall 1974 U.S. grain sales to the USSR, which was temporarily halted by President Ford in October, must have led the Japanese to believe that all foreign sales would be halted, so they entered into some long-term contracts as protection against this possible happening (which did not occur).

While overall U.S. export unit values for corn did not reach the level of unit values for corn sold to Japan from June 1973 to June 1974, the unit values for corn sold to Japan were about the same as the U.S. Gulf ports price for

yellow corn during that period of rapidly changing prices. 1/ Again, this indicates that the time between purchase and shipment to Japan was only 1 to 3 months.

Japan is dependent on soybeans as a steady source of food and feed. In 1973, when the U.S. soybean crop was short, Japanese buyers purchased U.S. soybeans at extremely high prices.

In early 1974 and early 1975, when U.S. export unit values of soybeans sold to Japan were higher than both the overall U.S. export unit value and the U.S. Gulf ports price, the Japanese took delivery on soybeans that they had purchased at a high price several months in advance. After the difficult situation of late 1973, the Japanese may have wanted to ensure a steady supply of soybeans regardless of price, as they did in wheat.

EC-9

During May-July 1973, the latter half of 1974, and most of 1975, U.S. export unit values of wheat to the EC-9 were much higher than the overall unit value for wheat.

During 1973, U.S. export unit values of wheat sold to the EC-9, like those sold to Japan, rose along with U.S. spot prices, since the EC-9 was also purchasing wheat on short-term contracts. During 1974 and 1975, the EC-9 entered into longer contracts to also ensure a supply of U.S. wheat. However, U.S. high-protein wheats were priced at a premium in 1975, so that the EC-9, as a heavy purchaser of high-quality wheat, had to purchase these wheats at a premium.

Except for the period August-October 1974, U.S. export unit values for corn sold to the EC-9 have been at about the same level as the overall export unit value for corn, since the EC is the single largest market for U.S. corn and has the heaviest influence on average unit values. During August-October 1974, U.S. export unit values of corn sold to the EC-9 were about the same as the Gulf ports price for corn.

U.S. export unit values of soybeans sold to the EC-9 remained lower than the overall U.S. export unit value through the tight situation in the soybean market in 1973, because of forward buying by these countries earlier in the 1972/73 soybean crop year. But in early 1975, when international soybean prices began to tumble, the EC had bought soybeans on long-term contracts, so was slower to adjust to the price decline than were other countries.

1/ See Selected Prices of International Significance, Foreign Agricultural Trade of the United States, May 1975, p. 84, for relationships between overall export unit values and U.S. Gulf prices for selected commodities.

Export Highlights

AGRICULTURAL EXPORT VALUE DOWN 2 PERCENT IN JULY-FEBRUARY

During the July-February period, U.S. agricultural exports totaled $14.67 billion, or 2 percent less than in the year-earlier period. The decline was due primarily to lower prices for soybeans, feed grains, wheat, and vegetable oils. Export volume of the major commodities at 71.5 million tons, was up 10.4 million tons. The volume index rose 10 percent to 165 (1967=100). Farm product export values were higher for wheat, feed grains, fruit, nuts, tobacco, meat, poultry, and hides. However, these gains were more than offset by value reductions for soybeans, cotton, rice, fats and oils, oilcake and meal, and vegetables.

At $1.7 billion, farm product exports in February were 11 percent below February 1975 and 14 percent below the January 1976 value. The most significant declines occurred in cotton, wheat, feed grains, and vegetable oils. Volume was greater in the case of wheat and feed grains, so lower prices accounted for most of the decline. Overall farm export volume in February was 8.5 million tons, compared with 7.9 million in February 1975.

During July-February 1975/76, wheat exports totaled nearly 22.8 million tons, 17 percent above similar months a year earlier, but value was up less than 4 percent to $3.58 billion because of lower prices. Most of the increased volume went to the USSR, East Germany, Poland, Brazil, Egypt, Algeria, and Italy. Census Bureau returns also showed substantial increases to West Germany, the Netherlands, and "unidentified countries" (transshipments through Canada). Export sales data 1/ indicate that during July-February, only 265,000 tons of wheat were shipped to West Germany; in contrast, the Census Bureau shows 956,000 tons. Conversely, accumulated exports to East Germany amounted to 692,000 tons, compared with an insignificant volume shown in Census Bureau records. Thus, about 72 percent of the wheat exported to West Germany as reported in Census Bureau data probably moved to East Germany via West German ports such as Hamburg.

U.S. wheat exports to Poland have also been sharply higher this fiscal year. Direct exports to Poland in July-February according to Census Bureau data were 438,000 tons; transshipments through Canadian ports (table 28) added 85,000 tons, for a total of 523,000 tons. (Export sales data showed 530,000 tons for the same period.) By comparison, wheat exports to Poland in July-February 1974/75 amounted to only 52,000 tons.

1/ U.S. Department of Agriculture, Office of the General Sales Manager, U.S. Export Sales, Mar. 11, 1976.

Soybean export volume continued to climb in February, bringing the 8-month total to 10 million tons, compared with a year-earlier level of 8 million. But because of lower prices, export value declined 8 percent to $2 billion. Spurred by lower prices, higher animal feeding rates, and anticipation of a European Community (EC) import deposit scheme, shipments to West European destinations advanced sharply. Direct shipments to the Netherlands exceeded 2.4 million tons against 1.5 million tons in July-February 1974/75; a substantial part of these soybeans were likely transshipped to other EC countries. Soybean exports to all EC destinations (not adjusted for transshipments) totaled 4.8 million tons in July-February versus 3.5 million tons a year earlier. Shipments to Japan, Taiwan, Canada, and "unidentified countries" were also larger (see table 29 for destinations of soybeans to "unidentified countries").

U.S. unmanufactured tobacco exports (including bulk smoking tobacco) in July-February slipped 2 percent below their 1974/75 volume, while higher prices yielded 7 percent more in value terms. Until the near-record 94 million pound movement in January, tobacco export volume this year had been 16 percent behind year-earlier levels. Over 37 million pounds of flue-cured leaf and 11 million pounds of other tobaccos were shipped to Japan in January, accounting for most of the increased volume. Another 16 million pounds of all types moved to Japan in February.

Poultry meat exports for July-February were sharply above year-earlier levels. Frozen chicken volume surged to 110 million pounds ($45 million) from 77 million ($27 million) in similar months last year, with Japan accounting for much of the increase. Exports of frozen turkey and parts neared 42 million pounds ($29 million), up from 22 million pounds and $13.6 million a year ago; EC countries and Canada purchased most of this.

White potato exports in January and February totaled over 95 million pounds, bringing the 8-month cumulative shipments to 322 million pounds. Chile, Portugal, Holland, and Sweden took most of the 29-percent volume increase. Value climbed 65 percent above its year-earlier level to $18 million. Short crops in many foreign countries resulted in greater import demand for U.S. potatoes.

Raw cotton exports dropped sharply again in February to 141,000 bales from 214,000 bales in January and 380,000 bales in February 1975. Cumulative cotton exports through February were 1.93 million bales or 17 percent lower than in July-February 1974/75. Value fell 23 percent because of lower prices. Export unit values in February turned upward, however, averaging $279 versus $267 in January and $264 in February 1975.
