DIGEST

U.S. Agricultural Exports To The EC: Continued Growth? (see p. 4). Since the early 1970's, U.S. agricultural exports to the EC of commodities subject to variable import levies have increased relatively faster than those not subject to the levies principally because of large shipments of U.S. corn to relieve reduced EC output. Although EC members continue to be the major beneficiaries of trade expansion, with increased economic growth and higher levels of living, the EC will likely continue to be a large and expanding market for U.S. farm products.

The Mideast: Again A Growing Market For U.S. Farm Products (see p. 40). U.S. exports of agricultural commodities to the Mideast are likely to be in the vicinity of $2 billion in 1977--up from $1.4 billion in 1976, and the previous peak of $1.65 billion in 1974. Total Mideast agricultural imports in 1977 are likely to reach $11 billion compared with $9.6 billion in 1976 and $3.5 billion in 1973. The rapid growth in Mideast agricultural imports has attracted the attention of our competitors who recently captured much of the growth in imports of wheat, meat, and dairy products.

Farm Exports Decline In August As Grain Prices Drop (see p. 53). Agricultural exports fell during August from July and from year-earlier levels. Lower grain prices and slack foreign demand preceding the new crop contributed to the monthly decline, but cumulative exports since last October, at $22.3 billion, exceeded the year-earlier value by 6 percent. Cotton, soybean products, livestock feed, fruits and vegetables, hides, tallow, and poultry products accounted for most of the increase.

U.S. Coffee Import Value Falls (see p. 93). Green coffee imports continued their decline and for the first time in nearly 2 years, green coffee's unit import value dropped. U.S. agricultural imports of $1 billion in August were about the same as a month earlier. Cumulative imports for October-August 1976/77 totaled $12.4 billion, 29 percent higher than a year earlier.

U.S. AGRICULTURAL EXPORTS TO THE EC: CONTINUED GROWTH?

by
Robert L. Tontz*

The European Economic Community (EC) is the largest foreign market in the world for U.S. agricultural products accounting for more than one-fourth of the value of the U.S. total sent abroad. With increased economic growth and higher levels of living, the EC will likely continue to be a large and expanding market for U.S. agricultural commodities as a whole.

Established by the Treaty of Rome in 1957, the EC became operational with transitional merger measures in 1958. The EC will have been in existence for two decades at the end of 1977.

After its formation, the EC functioned through 1972 with its six original members: France, Belgium, Luxembourg, Italy, the Netherlands, and West Germany. In 1973, Denmark, Ireland, and the United Kingdom became members and are scheduled to be fully integrated at the end of 1977. Negotiations are currently underway with Greece for that country's full membership in the EC. Spain and Portugal have applied for membership.

Members have brought a number of former dependencies and a few other developing countries into special association with the Community. In the early years, the majority of the countries and territories included those in Africa which were former colonies of the EC members. The formation of these special trade agreements and preferences has been pursued since the EC was established.

EC international agreements giving preferences on agricultural products have been concluded with four broad groups of countries: (1) those of the Lome Convention (an agreement regulating trade between the EC and 52 African, Caribbean, and Pacific countries, the ACP's); (2) those bordering the Mediterranean Sea; (3) developed countries excluding both the United States and the non-EC developed Mediterranean countries; and (4) all other foreign countries. 1/

Under the EC's Common Agricultural Policy (CAP), begun in 1962, most of the impact of marketing restrictions is borne by nonmember countries. The principle of Community preference favors EC farm products by providing that non-EC farm products should always be more costly to buy than EC-produced commodities. Although all EC international agreements include this aspect, the EC does grant some farm products from certain third countries more favorable terms than those provided to products from other non-EC sources, such as the United States.

Trade restrictions under the CAP are implemented principally by the EC system of variable import levies. These levies, which were made uniform in 1967 throughout the EC-6 and on July 1, 1977, for the EC-9, are designed to offset the difference between world prices of commodities and the desired price in the Common Market. This system promotes a policy of protection, self-sufficiency, and price equalization in the Common Market countries.

---

*Agricultural Economist and Leader, Statistics Program Area, Foreign Demand and Competition Division. The author gratefully acknowledges the helpful suggestions of Boyd A. Chugg, Riley H. Kirby, Dewain H. Rahe, Omero Sabatini, and Thomas A. Warden.

1/ For a detailed discussion of the agreements and preferences, see Omero Sabatini, "The EC and Its Special Third-Country Partnerships," Foreign Agriculture, February 21, 28, and March 7, 1977.

A 1972 study analyzed the trade impacts of the EC agricultural policy through the early 1970's with special reference to U.S. agricultural exports. 2/ The principal findings of that analysis were:

> Since the inauguration of the CAP, U.S. commercial sales of agricultural products to the EC grew at a much slower rate than they did to other countries.
>
> U.S. exports of farm commodities to the EC subject to variable import levy restrictions--mainly feed grains, wheat and wheat flour, rice, and poultry--were held in check.
>
> EC members were the major beneficiaries of agricultural trade expansion to the detriment of third-country suppliers.

This study analyzes agricultural trade developments since the 1972 analysis. The evaluation shows that the stimulus resulting from economic integration and growth in Europe has caused U.S. agricultural exports to increase to the EC; the rate of gain in U.S. agricultural exports to the EC has been less than to the rest of the world; U.S. agricultural exports subject to the EC variable levies, excluding corn, evidenced the same rate of increase as for nonvariable levy commodities except for the first half of 1977 when the gain for exports including corn under variable levies was lower; U.S. imports of agricultural commodities from the EC have increased but at a lower rate than from the world excluding the EC; the leading beneficiaries of EC agricultural trade expansion have been the EC member countries.

U.S. Agricultural Exports Slower to EC Countries than to Non-EC Countries

In 1972, U.S. commercial agricultural exports to the EC-6 were more than double their average value in 1959-61. Meanwhile, U.S. commercial agricultural exports to the world, excluding the EC-6, showed a substantially larger increase.

An examination of more recent developments, including values for 1976 after the EC had earlier enlarged in 1973 to nine members following the accession of Denmark, Ireland, and the United Kingdom to the original six, shows again that U.S. commercial farm commodity exports to the EC gained at a slower rate than they did to the world excluding the EC. U.S. commercial agricultural exports not adjusted for transshipments to the EC-9 totaled $6.42 billion in 1976. They were 2.7 times their 1970-72 value. At the same time, U.S. commercial agricultural exports to the world (excluding the EC-9), which were $15.18 billion in 1976, showed a larger gain (3.3 times their 1970-72 value) than U.S. commercial agricultural exports to the EC (table 1).

Mixed Trends: Variable and Nonvariable Levy Exports

Although U.S. exports of farm commodities to the EC that were subject to variable import levies were held in check from the early 1960's to the early 1970's, a somewhat reverse situation has since existed (fig. 1). In 1976, U.S. agricultural exports of variable levy commodities to the EC were 3.7 times their average value in 1970-72. U.S. agricultural exports of non-variable levy commodities to the EC showed a much smaller increase over their 1970-72 average value; their 1976 value was 2.3 times their 1970-72 average value. Of particular note in these developments is the export role played by feed grains in 1976, principally corn, a variable levy commodity. With the deletion of corn exports from the U.S. agricultural export total of variable levy commodities to the EC, the adjusted gain in these commodities was considerably less.

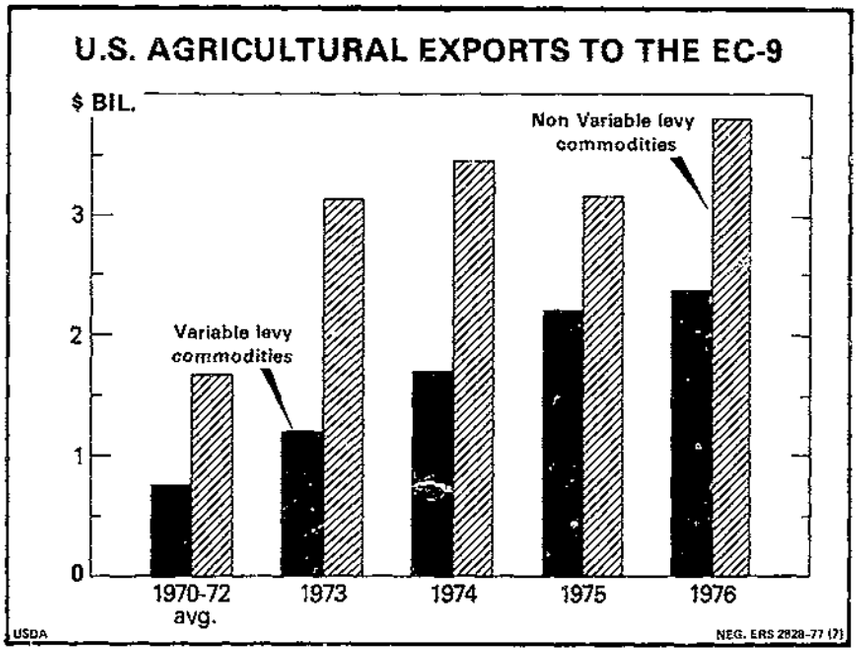

Fig. 1

U.S. exports of commodities subject to variable levies (excluding corn) in 1976 were 2.3 times their 1970-72 average value for all variable levy commodities excluding corn. U.S. corn exports accounted for nearly 80 percent of the increase in these exports to the EC during this period. U.S. exports of nonvariable levy commodities in 1976 were 2.3 times their 1970-72 average value--the same as for the adjusted variable levy exports (table 2).

The growth of U.S. agricultural exports to the EC has been significantly affected by U.S. exports of feed grains, mainly corn. The substantial increase in the value of corn exports to the EC resulted from significant gains in volume shipped and prices received which were roughly similar. The volume and price indexes in 1976 (1970-72=100) were 224 and 208, respectively.

U.S. exports of oilseeds and products, principally soybeans and oil cake and meal, have also played a significant U.S. export role. The value of U.S. soybean exports to the EC evidenced a sharp increase in recent years. The value gain came about from increases in both quantity exported and higher prices received with the latter accounting for the larger share of the value gain. The quantity index of soybeans exported to the EC in 1976 (1970-72=100) equaled 142, whereas the unit value (price) index in 1976 (1970-72=100) was 190.

Nearly three-fourths of the increase in U.S. agricultural exports to the EC from 1970-72 to 1976 was accounted for by export gains for feed grains and oilseeds and products. Expansion of the EC livestock industry and grain production declines in 1975 and 1976 in the EC resulting from unfavorable weather contributed to stimulating U.S. exports of these commodities. The U.S. has an important dependence on the EC as a market outlet for U.S. exports of these products. In 1976, the EC took one-third of the U.S. feed grain exports and over two-fifths of the U.S. oilseeds and product exports. Together, these commodity groups accounted for two-thirds of total U.S. agricultural exports to the EC in that year.

Other important U.S. agricultural exports to the EC in 1976 with export values exceeding $100 million and their values in millions of dollars were tobacco (349), wheat (297), vegetables and preparations (184), hides and skins (173), fruits and preparations (149), corn gluten feed (129), and variety meats (110).

Information for the first half of 1977 reveals that U.S. exports to the EC of variable levy commodities were moderately above their value for the previous year, while nonvariable levy commodities evidenced a substantial value gain (table 3).

Among the variable levy commodities, a significant value increase in U.S. exports of feed grains and corn byproducts stimulated by reduced EC production of grains and forage in 1976 was more than sufficient to offset export declines for wheat, rice, and poultry and eggs. EC wheat production, unlike coarse grains, was up in 1976.

For nonvariable levy commodities, the export value rise during the first half of 1977 resulted mainly from an increase in exports of oilseeds and products reflecting reduced availabilities of grains, increased needs for proteins. and reduced availabilities of protein supplies from other than U.S. sources. The increase in U.S. exports of oilseeds and products eq' ,,ed nearly two-thirds of the $733 million total export value increase in nonvariable levy commodities. All major nonvariable levy commodities, except fruits and preparations, had export increases. Noteworthy gains were registered for inedible tallow, cotton, corn gluten feed, hides and skins, and tobacco.

Growth of U.S. Agricultural Imports From EC

U.S. imports of agricultural commodities from the EC continue to rise. The United States, however, is a much smaller market for EC agricultural exports than the EC is as a market for U.S. agricultural exports. In 1976, U.S. imports of agricultural commodities from the EC totaling $1.2 billion were less than one-fifth of the value of U.S. agricultural exports to the EC.

Besides being a larger producer of agricultural products, the United States has experienced a relatively greater growth in its agricultural production than has the EC. The United States expanded per capita agricultural output 15 percent by 1976 from a decade earlier; the EC had a per capita gain of about 8 percent during this period.

With increased output, U.S. needs for agricultural imports could be expected to decline, remain the same, or, at most, increase at a slower rate. The record shows, however, that U.S. agricultural imports from the EC, totaling $1.2 billion in 1976 were significantly above their earlier peak of $436 million in 1970 and were also appreciably above their 1970-72 average value. U.S. agricultural imports from all countries, excluding the EC, also showed an increase from their 1970-72 average to 1976 exceeding that which occurred for the EC (table 4). Leading U.S. agricultural imports from the EC include such commodities as wine, pork, malt beverages, cheese, vegetables and preparations, and hides and skins.

EC Intra-Trade Up

EC agricultural imports in 1975 were $51.09 billion and were substantially above their average value in 1970-72. The value increase resulted from enlargement of the Community from 6 to 9 members, commodity price increases, and quantity increases of commodities imported.

Of the total value increase of EC agricultural imports from the early 1970's to 1975, three-fifths represented a gain resulting from intra-trade. The nine countries, now members of the EC, accounted for 33 percent of their total agricultural imports in 1970-72. By 1975, this share had increased to 46 percent. Although it could be expected that the EC system would favor its own members more than nonmembers, the extent of the practice, it would seem, might be usefully reevaluated. EC benefits could likely result from a policy of freer trade resulting in improved resource use efficiency.

Third countries other than the United States suffered a decline in their share of total EC agricultural imports. Their share equaled 57 percent in 1970-72 and 42 percent in 1975. The U.S. share, while relatively smaller, increased 2 percentage points to reach 12 percent in this period. The United States, however, accounted for only 14 percent of the gain in total EC agricultural imports from 1970-72 to 1975 (table 5).

Conclusions

The EC, the number one outlet abroad for U.S. farm product exports, has been a growth market. The growth of agricultural exports to the EC compares favorably with that to Japan which has shown the greatest rate of increase over the past decade of the major foreign markets for U.S. farm products.

As previously indicated, increases in U.S. exports of feed grains and oilseeds and products represented the principal contributors to the U.S. gain in exports to the EC. Both increased EC imports of feed grains and oilseeds along with greater EC output of grains over the past decade contributed to higher production of livestock and livestock products in the EC.

EC per capita consumption of livestock and livestock products, which is relatively high, continues to expand. With further economic development but a possible slowing of already high EC crop yield gains in the future, a favorable potential for an expanded EC demand for feed grains and oilseeds and products would exist. The United States should benefit from such an additional demand.

The foregoing along with other probable developments need to be analyzed to show their possible impacts. Some of the other probable developments include the enlargement of the EC, its continuation of special trade agreements and preferences, and the effect of the EC restrictions of the trade area accessible to the United States; the stimulus to EC production increases within the trade-sheltered area and consequent competition for U.S. farm exports; and the extent of diversion of products of other countries from the larger, protected EC market and its competitive impact on U.S. agricultural exports.

THE MIDEAST: AGAIN A GROWING MARKET FOR U.S. FARM PRODUCTS

by
John B. Parker, Jr. 1/

U.S. exports of agricultural commodities to Mideast countries are expected to reach a record $2 billion in 1977, about 45 percent above 1976's $1.37 billion. Larger shipments of cereals, vegetable oils, soybeans, cotton, and livestock products to Iran and Egypt will account for most of the increase.

U.S. farm exports to Mideast markets rose sharply from $354 million in 1972 to a peak of $1.65 billion in 1974, declined slightly in 1975, and fell 16 percent in 1976. Rising competition from other suppliers and lower grain prices caused most of the decline.

Total Mideast agricultural imports increased steadily from $2.3 billion in 1972 to $8.2 billion in 1975 and nearly $10 billion in 1976. The value is expected to rise to about $11 billion in 1977.

In 1976, the European Community moved ahead of the United States in value terms to become the leading supplier of Mideast imports of food, and the race will again be close in 1977. Agricultural exports from Australia are likely to approach $1 billion in 1977, and combined deliveries of farm products from three big Asian suppliers (India, Pakistan, and Thailand) will account for another billion dollars.

The Mideast is the leading market for U.S. wheat flour, cottonseed oil, corn oil, tallow, and dozens of processed foods, including peanut butter and tomato products. It takes over half our commercial exports of rice and about one-sixth of our wheat exports, but less than 3 percent of our corn exports. The major Mideast market for American and European farmers is Egypt, while for Asians it is Iran and the Arabian Peninsula.

Continued Rapid Expansion In Farm Imports Expected

Total Mideast agricultural imports can be expected to continue increasing at a rapid pace in the next 5 years, possibly in the range of 10 to 15 percent annually, before slowing down when diets are more satisfactory.

The Mideast accounted for 6 percent of U.S. agricultural exports to all markets in 1976. If the United States increases its share of one-fifth of the Mideast market for agricultural imports, the value of our farm exports to this area could possibly reach $4 billion before 1985, double the projected record this year.

At this time it appears certain that Egypt will be a billion dollar market for U.S. farm products before 1980. Iran could also cross over the $1 billion mark if agricultural products become difficult to obtain from Asian countries who have become major suppliers.

*Mideast countries include Egypt, Libya, Sudan, Saudi Arabia, Kuwait, Qatar, Bahrain, UAE, Oman, PDR Yemen, Yemen Arab Republic, Iraq, Iran, Syria, Jordan, Lebanon, Israel, Cyprus, and Turkey.

1/ Agricultural Economist, Developing Countries Program Area.

Increasing petroleum revenues, programs to modernize food delivery systems, and trends in population and food production all point to continued rapid growth in Mideast food imports in the next several years.

Mideast countries will receive over $110 billion in revenues from 1977 petroleum exports, including about $40 billion for Saudi Arabia, $25 billion for Iran, and approximately $10 billion each for Kuwait, Iraq, Libya, and the United Arab Emirates (UAE). This will be over five times the value of petroleum exports in 1973 when prices were quadrupled by the Organization of Petroleum Exporting Countries (OPEC). Mideast agricultural imports in 1977 are expected to be valued at only 10 percent of the income from petroleum revenues.

While the average diet in urban areas has improved since 1973, programs to provide modern food marketing, storage, and steady commodity flows are only beginning. Port congestion has eased in Iran, allowing more prompt unloading of farm products. More ships are unloading grain in Port Said and Suez. Congestion in Alexandria remains serious because of Egypt's soaring food imports.

Population in the Mideast is growing about 2.5 percent annually. Kuwait and the UAE have growth rates of more than 9 percent annually because of immigration related to lucrative job opportunities. The Mideast, including Turkey, now has about 190 million people, and the population might catch that of the United States during the 1980's. However, the average person in the Mideast consumes only about 2,500 calories per day, 700 less than the average American.

The area of cultivated cropland in the Mideast has not increased significantly since 1972 and yields are already relatively high. Per capita agricultural production remains below the 1961-65 level in most countries. Urbanization is taking some of the best cropland in Egypt, Iran, and Lebanon.

Trends in U.S. Agricultural Exports to Selected Countries

Egypt

U.S. agricultural exports to Egypt in 1977 are expected to range between $600 million and $700 million. About one-third of this value will be financed under title I, P.L. 480, and nearly one-third under commodity loans. U.S. agricultural exports to Egypt increased steadily from $43 million in 1972 to $454 million in 1976.

Estimates for U.S. exports of major commodities to Egypt in 1977 (in millions of dollars) include: wheat, 200; wheat flour, 60; cottonseed oil, 110; tallow, 60; cotton, 50; and tobacco, 58. Egypt has become a larger market for U.S. soybeans, soybean oil, frozen poultry, and processed foods in the recent years.

Changes in trade policy and rising financial inflows from OPEC have contributed to Egypt's growth as an importer of agricultural commodities. Egypt imported 24,000 tons of U.S. short staple cotton in early 1977 at 88 cents per pound in order to free expensive grades of Egyptian cotton for export at over $1.60 per pound.

Egypt's total agricultural imports in 1977 are estimated at $2 billion--up from $1.6 billion in 1976 and an average of $305 million in 1970-73. Imports of meat from Latin America and Australia have increased markedly in the last 2 years.

Iran

U.S. agricultural exports to Iran in 1977 are expected to surpass the previous annual peak of $534 million recorded in 1974, because of larger deliveries of wheat, rice, corn, and vegetable oils. Our wheat exports to Iran this year should again reach 1

million tons, up from 438,000 tons in 1976. U.S. rice exports might reach 500,000 tons in 1977, double the 1976 level. Our exports of corn and barley combined might reach 400,000 tons this year. U.S. exports of pulses, tobacco, and frozen poultry to Iran have increased markedly in the last 2 years. The value for our sales of each of these products to Iran in 1977 should exceed $10 million.

Iraq

Larger sales of rice and barley should push U.S. agricultural exports to Iraq to $100 million in 1977. Iraq will be the fourth largest Mideast importer of agricultural commodities from the world in 1977, following Iran, Egypt, and Saudi Arabia. Fluctuations in rice purchases by Iraq have followed a pattern similar to those by Iran. Consumers in both countries like U.S. rice, but Government agencies make purchases in an irregular manner.

Saudi Arabia

U.S. farm exports to Saudi Arabia reached $165 million in 1976 and should remain about the same in 1977. Saudi Arabia is one of the fastest growing importers of farm products in the world and competition for U.S. suppliers intensified in the last 3 years. Saudi Arabia's total agricultural imports increased from $283 million in 1972 to about $1 billion in 1976, and purchases of U.S. food increased 512 percent.

Saudi Arabia is becoming a major market for many American processed foods. In 1976, it was among our five leading export markets for peanut butter, peanut preparations, canned pears, popcorn, pickles, fresh milk, beef, catsup, and various fruit and vegetable items.

Larger U.S. exports of processed foods to Saudi Arabia are underway this year, but deliveries of the two major commodities--rice and wheat flour--declined in early 1977.

Syria

Marked gains in shipments of rice and tobacco pushed the value for U.S. agricultural exports to Syria to $44 million in 1975, but the value fell to $40 million in 1976 as wheat deliveries were temporarily ended. Larger exports of rice and wheat will offset the decline in our tobacco exports to Syria this year, thus leaving the value for all farm products near the 1976 level.

Lebanon

Civil strife seriously reduced normal shipments of U.S. wheat flour, corn, and processed foods to Lebanon in the past year. U.S. agricultural exports to Lebanon fell from a peak of $70 million in 1974 to only $19.5 million in 1976. Larger deliveries of wheat, rice, corn, and pulses should cause U.S. agricultural exports to Lebanon to double in 1977.

Other Arabian Peninsula

Kuwait's agricultural imports are also increasing rapidly because of rapid population growth bolstered by immigration. Total agricultural imports increased from $188 million in 1975 to $420 million in 1976. U.S. farm exports to Kuwait declined from $21 million in 1974 to $13 million in 1976 because of smaller rice deliveries. Larger sales of rice, poultry, and barley should push the value of U.S. farm exports to Kuwait above $20 million in 1977.

Total agricultural imports by the United Arab Emirates increased from $88 million in 1972 to about $400 million in 1976. U.S. agricultural exports to this market reached

$13 million in 1976--eight times the 1972 value. This is a growing market for U.S. frozen poultry, almonds, fruit juices, and many processed foods served in modern restaurants and a growing number of fast food establishments.

U.S. agricultural exports to Yemen increased from $4 million in 1975 to $14.6 million in 1976 and further gains are expected in 1978. Yemen Arab Republic is becoming a significant cash market for U.S. rice and flour as more Yemeni workers bring home the savings from employment in Saudi Arabia. U.S. agricultural exports to Qatar increased from $961,000 in 1975 to a record $1.55 million in 1976 a gain of 61 percent, mostly because of larger sales of tomato juice. Oman's agricultural imports reached $100 million in 1976, including only $1 million from the United States.

Israel

U.S. agricultural exports to Israel in 1977 are likely to surpass the 1975 peak of $312 million because of higher soybean prices and larger deliveries of wheat, corn, and sorghum.

Israel's share of U.S. agricultural exports to the Middle East declined from 47.4 percent in 1968 to only 15.5 percent in 1974, but edged up to 19.3 percent in 1976. The commodity mix for our agricultural exports to Israel contains a higher proportion of coarse grains and soybeans than any other Mideast market.

Trends in U.S. Farm Exports by Commodities

Wheat and Wheat Flour

Total Mideast imports of wheat and flour are likely to reach 10 million tons in 1977. U.S. exports of wheat and wheat flour (in wheat equivalent) to the Mideast should reach a record 4.5 million tons in 1977, including 2.1 million tons to Egypt, and over 1 million tons to Iran. Poor harvests caused wheat imports by Iraq to soar in 1977.

The United States sent about 3.3 million tons of wheat and flour to Mideast markets in 1976--down from a record 4 million tons in 1974. A 60-percent gain in shipments to Egypt helped prevent a sharper rate of decline.

Rice

U.S. rice exports to Mideast markets should reach a new record of 750,000 tons in 1977, including 500,000 tons to Iran, 100,000 tons to Saudi Arabia, 60,000 to 80,000 tons each to Syria and Iraq, and 25,000 tons to Yemen Arab Republic.

Total Mideast rice imports are expected to reach 1.7 million tons in 1977, with larger purchases from Pakistan, Thailand, and the United States.

Feed Grains

U.S. corn exports to Egypt might reach 1 million tons in 1977, double the 1975 level. Barley sales to both Iran and Iraq should exceed 100,000 tons this year. Total U.S. exports of feed grains should reach 2 million tons in 1977.

Livestock Products

Imports of livestock products by Middle East countries in 1976 approached $500 million and the value might reach $700 million in 1977. The Mideast is a booming market for imported beef, mutton, frozen poultry, tallow, and dairy products.

U.S. exports of frozen poultry to the Mideast increased from $2.3 million in 1975 to a record $33.9 million in 1976 including delivery of 28,135 tons to Iraq. Our poultry exports to Kuwait and the UAE more than tripled in 1976. Total Mideast poultry imports reached 160,000 tons in 1976--double the 1974 level. Large sales of U.S. poultry to Iran, Iraq, and Egypt are scheduled for 1977.

Oilseed Products

U.S. exports of oilseeds and products to the Mideast might reach $350 million in 1977 because of larger sales to Iran, Egypt, and Israel.

Larger imports of vegetable oils by Egypt, Iran, Iraq, and Lebanon are occurring this year. These countries are paying higher prices for their cooking oil import needs since larger Soviet and Indian purchases have bolstered world prices.

U.S. exports of cottonseed oil to Egypt are likely to reach 180,000 tons in 1977--up from 138,000 tons in 1976 valued at $73 million. Egyptian imports of cottonseed oil reached 279,600 tons in 1975, for a value of $195 million.

Now that India has banned further peanut exports, an excellent opportunity exists for sales of U.S. confectionery peanuts to Iran, Iraq, Syria, and Egypt. Exports of U.S. salted peanuts to the Mideast almost reached $1 million in 1976--triple the 1975 value. Egypt was once a considerable peanut exporter before domestic demand soared.

Tobacco

U.S. exports of tobacco to Mideast markets increased from $36 million in 1975 to a record $52 million in 1976. The leading markets were (in millions of dollars): Syria, 18.2; Egypt, 17.6; Iran, 7.1; and Libya, 4.9. Much larger sales to Egypt and Iran should push the value of U.S. tobacco exports to the Mideast to $95 million in 1977.

High quality cigarette brands made in Mideast factories usually contain a high proportion of U.S. tobacco in the blend. Syria, Iran, Iraq, and Libya are relatively new markets for U.S. tobacco with great potential for future growth.

Total imports of tobacco by the Middle East are rising fast because of expanding deliveries by the United States, Italy, Greece, Yugoslavia, Brazil, and Zambia. Imports of American and British cigarettes continue to rise because no factories yet exist in most countries of the Arabian Peninsula.

Fruits, Vegetables, and Nuts

Exports of these products to the Mideast increased markedly in 1976, mostly because of larger sales to Saudi Arabia and Gulf sheikdoms. U.S. exports of fruit juices, almonds, and canned fruit to Saudi Arabia, the UAE, and Kuwait in 1976 were double the 1974 level. Total exports of U.S. fruits, vegetables, and nuts to the Mideast might reach $80 million in 1977.

Lebanon's civil war caused its once-important shipments of fresh apples, oranges, onions, potatoes, and stone fruits to Iran, Iraq, and the Arabian Peninsula to dwindle in 1976, although considerable supplies were still exported to nearby Syria and Jordan. New markets for U.S. processed fruits and vegetables have opened up in Iran and Saudi Arabia, although other suppliers have been far more successful.

The United States recently sold 4,000 tons of pulses to Egypt, but cash sales to Egypt this year are likely to be even larger. Iran, Kuwait, and Saudi Arabia are

also expanding markets for U.S. dry beans and lentils.

CONCLUSION

U.S. agricultural exports to the Mideast should continue to rise in 1978, possibly to $2.6 to $3.0 billion. Grain production this year was down sharply in Iran, Iraq, and Syria, and Egypt also had a considerable decline. The setback in production will accelerate the growth in grain imports next year. Also, competitive exporters of wheat, rice, corn, and barley no longer have the huge supply available for export as they did in early 1977. As a residual supplier, opportunities for increased sales by the United States should improve.

Rising incomes, improved port unloading facilities, grain stockpile programs, and wider distribution of imported food beyond major cities will cause further gains in Mideast agricultural imports. The total value for agricultural imports might reach $13.5 billion in 1978, with a slight improvement in the U.S. share of this market.

Note on Mideast Trade Statistics

Trade statistics for the Mideast countries are improving, but the reader must not expect to find the prompt reporting and complete tabulations of trade as one would for Europe or the United States. For example, Egypt's statistics for imports of farm commodities by country of origin in 1972 and 1973 did not include some supplies which were purchased through concessional financing or where customs reports were not promptly prepared because of port congestion. By 1975, Egypt's statistics for agricultural imports appeared in the vicinity one would expect to find them from preparing matrix tables for shipments to them by other countries.

FARM EXPORTS DECLINE IN AUGUST AS GRAIN PRICES DROP

U.S. agricultural exports neared their predicted $24-billion level as the end of fiscal 1977 approached. Lower grain prices and seasonal export declines preceding new crops depressed overall value in August to just over $1.5 billion. Since April, the value of farm product exports has fallen steadily from their 1977 peak of $2.2 billion.

Cumulative exports since last October totaled $22.3 billion, compared with slightly less than $21 billion a year earlier. Increases were concentrated in raw cotton, oilseed products, animal feed supplements, tobacco, fruits and vegetables, hides, tallow, and poultry products. Wheat and corn exports by contrast have fallen, lowering the value of grains and grain products by 20 percent. The volume of wheat exports fell 23 percent from the previous year's rates, but lower prices caused a 40-percent drop in value.

The wheat export unit value during October-August averaged $121 per ton, compared with $155 a year earlier. In August, the unit export value of wheat fell further to $101 per ton. Reduced shipments to India, Brazil, Germany, and Algeria have not been offset by increased shipments to Korea, Egypt, Iran, and Nigeria.

Corn exports through August were down only slightly in volume to about 39 million tons, but value skidded 14 percent as export unit values dropped to $107.60 in October-August from more than $120 a year earlier. In August, these exports averaged only $89. Destinations shifted to the European Community (EC), Japan, Korea, Taiwan, Portugal, Greece, and Mexico from the USSR, Poland, and Spain. Increased grain sorghum and barley movements nearly compensated for the corn reduction. Rice exports have been holding up well this year, especial. to Iran, Indonesia, and Nigeria.

Although soybean exports in August amounted to less than 500,000 metric tons, heavy shipments earlier in the year resulted in a cumulative total of 14.7 million tons, compared with slightly less than 14.5 million the previous year. Germany, the USSR, and Canada received most of the increase in shipments.

Soybean oil exports continued heavy in August with most shipments going to India, Colombia, Israel, Canada, Ecuador, and Australia. Gains by destination for the 11-month period principally included India, Pakistan, Iran, Peru, Colombia, and Mexico. The October-August volume of 672,000 tons was 80 percent above year-earlier levels, and value jumped 132 percent to $396 million.

U.S. COFFEE IMPORT VALUE FALLS

U.S. agricultural imports, valued at $1 billion in August 1977, were about the same as a month earlier but were 8 percent higher than last August. Noncompetitive imports continued their decline with green coffee again contributing to most of it. There were also substantial monthly reductions in imports of dry rubber and tea. It was the first monthly decline in tea imports since February.

The unit import price of green coffee in August declined for the first time in almost 2 years--down 4 percent from July's level, reflecting the monthly drop in world prices of green coffee since April.

Imports of competitive products were up in August, as increases mainly in live animals, fresh and frozen beef and veal, poultry, vegetable oils, sugar, tobacco, and wine more than offset decreases in pork, fruits and fruit preparations, and oilseeds.

Cumulative import value for October-August 1976/77 totaled $12.4 billion, 29 percent higher than a year earlier. Value increases occurred mainly for green coffee, followed by most other tropical products, dairy products, poultry products, fruits and preparations, vegetables and preparations, nuts and preparations, oilseeds and oilseed products (mainly flaxseed and coconut oil), tobacco, malt beverages, and wine. Winter freezes and other weather conditions generally caused imports of fruits and vegetables to increase about 40 percent over the year-earlier period. Large gains occurred particularly for frozen strawberries, oranges, raisins, and tomatoes.

The quantity of vegetable oils declined as prices increased, mainly for coconut oil. Unit import value of coconut oil was about 22 cents per pound for October-August 1976/77, compared with about 15 cents per pound a year earlier.

Cumulative value imports of meat and meat products and sugar declined. However, the quantity of sugar imports rose as unit import values for October-August 1976/77 were $184 per short ton, compared with $298 per ton a year earlier.

Table 35.--U.S. agricultural imports: Value by commodity, October-August 1975/76 and 1976/77 and August 1976 and 1977

1/ Excludes imports of coconut oil. 2/ Excludes imports of fibers, excl. cotton and jute.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and aircraft engaged in foreign trade. Data on shipments valued at less than $251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. USDA payments are excluded from the export value. Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country known to him at the time of shipment from the United States. Shipments of certain U.S. grain from Great Lakes ports to Canadian ports are designated as exports to "unidentified countries." Except for Canada, export shipments valued at $251-$999 are included on the basis of sampling estimates; shipments to Canada valued at $251-$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than $251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
