WHOLESALE PRICES OF FRESH FRUITS AND VEGETABLES AND AUCTION PRICES OF
FRESH FRUITS AT NEW YORK CITY AND CHICAGO AND F.O.B. PRICES
AT LEADING SHIPPING POINTS, BY MONTHS, 1953

Prepared by Lillian V. Walsh, Fruit and Vegetable Division,
Agricultural Marketing Service

INTRODUCTION

The prices listed in this report represent sales in wholesale lots of fresh fruits and vegetables at New York City, Chicago, and at important shipping points where Federal-State market news field stations were located during 1953. The report also includes monthly average auction prices for important fresh fruits, compiled by the Statistical and Historical Research Branch from information obtained from the New York Daily Fruit Reporter and the Chicago Fruit and Vegetable Reporter.

The wholesale prices for private sales at New York and Chicago during the year are simple averages of representative prices based on the market news reporter's estimate of volume of sales at different price levels, quality, condition, and other factors for Tuesday of each week during the month. The shipping point prices are simple averages of the mid-points of the daily range throughout the year. The shipping point price for a month generally is shown only when there were quotations for six or more days during that month.

The wholesale prices for Chicago and New York represent private sales in quantities of less than carload lots and generally represent sales made by the first seller in the terminal market. Prices are for stock of generally good merchantable quality and condition -- U. S. No. 1 grade when quoted. In a few instances, prices representing carlot or auction sales are reported, but these are indicated in the body of the report.

The prices reported for important shipping points or shipping areas refer to sales in straight or mixed carloads or truckloads, unless otherwise noted.

The report includes prices considered representative of a commodity as to origin, variety, size, and container. For example, the monthly prices shown for apples represent fruit of good quality and condition, mostly 2½-inch minimum size for selected varieties, believed to represent a large proportion of the market supply of eastern and midwestern fruit.

Prices representing "sales f.o.b." refer to transactions in which the buyer assumed responsibility for the carlot at shipping point. Those prices representing transactions on a "delivered sales, shipping point basis", refer to transactions in which the seller assumed responsibility for delivery to the market. The prices for the latter group of transactions were adjusted to a shipping point basis by making appropriate deductions for transportation and protective services. Terms and conditions of sales and definitions pertaining to trade practices are more fully described in regulations issued by the Secretary of Agriculture in connection with the administration of the Perishable Agricultural Commodities Act.

The index of wholesale prices for fruits and vegetables at New York and Chicago was computed by weighting the monthly prices shown in this report by the monthly carlot and trucklot unloads reported for New York and Chicago. The index was adjusted for seasonal variation based on experience in the base period, 1935-39. The index of wholesale prices of fruits and vegetables at New York and Chicago was computed from prices for the most important fruits and vegetables. Although the index numbers are believed to be representative of prices of fruits and vegetables on the markets at New York and Chicago, they do not include prices for produce sold in other sections of the country, nor do they allow for products that are not generally sold on these two markets.

Table 3.—Average prices of specified fruits and vegetables at leading shipping points, each month by description of sale, 1953.

(Shipping point prices in this table are simple averages of the mid-points of the daily range and are only for months during which market news stations were in operation in the specified districts.)

^{1/} The index of wholesale prices presented in this table were computed from prices representing private and auction sales, weighted according to the unloads of each fruit and vegetable for that month. Index numbers for the year were obtained by weighting the monthly data by the unloads for the respective months.

The following fruits and vegetables are included for the years 1935 to 1940: Apples, cantaloups, cherries, cranberries, grapefruit, grapes, honeyball melons, honeydew melons, lemons, oranges, peaches, pears, plums and prunes, strawberries, watermelons, asparagus, snap beans, broccoli, cabbage, carrots, cauliflower, celery, green corn, cucumbers, lettuce, onions, peas, peppers, potatoes, spinach, sweetpotatoes, and tomatoes. The following fruits and vegetables were added beginning in 1941: Blueberries, beets, escarole, kale, mushrooms and radishes.
