1987 ANNUAL REPORT OF THE SOUTHWESTERN MINNESOTA FARM BUSINESS MANAGEMENT ASSOCIATION

bу

Kent D. Olson, Erlin J. Weness, Dary E. Talley, Perry A. Fales and Rann R. Loppnow*

This report summarizes the individual farm records of the members of the Southwestern Minnesota Farm Business Management Association. Wholefarm information and enterprise costs and returns are reported. In addition to the average of all farms, the averages for the high and low income groups are also presented. Both members and nonmembers can compare their operation to this information to find areas that need management attention and areas which have above-average performance. Creditors, policy makers, and others interested in agriculture will find this information useful also.

The tables are divided into three major groups. Tables 1 through 9 present whole-farm information. Tables in the 10-x series provide information on crop enterprises. Tables in the 11-x series provide information on livestock enterprises. Table 12 contains information on the prices used in the analysis. A summary of the average whole-farm information over time is presented in Table 13. Tables 14, 15 and 16 categorize the whole-farm information by county, by gross income class, and by type of farm, respectively. Tables 17 and 18, respectively, report the corn and soybean cash rented enterprises by county.

Of the 205 farms in the Southwestern Association, the data for 178 farms are included in this report. The rest were omitted because the records were incomplete at the time that this report was prepared. No claim is made as to whether the farmers who belong to the Association are or are not representative of all farmers in southwestern Minnesota.

In addition to this report, members receive an annual farm business analysis; on-farm instructional visits; end-of-year income tax planning and preparation; periodic meetings, tours, and seminars; a monthly newsletter; and other managerial and educational assistance. Each farmer pays an annual fee which covers a large part of the cost, with the balance defrayed by the Minnesota Extension Service and research programs of the University of Minnesota. The year-end analysis of the individual farms was performed by the fieldmen using FINANX 7.0 from the Center for Farm Financial Management within the Department of Agricultural and Applied Economics. The individual analyses were summarized at the Department of Agricultural and Applied Economics with a database program developed by Rann Loppnow. The data is used for other research and educational projects.

^{*} Olson is Assistant Professor of Farm Management; Weness, Talley and Fales are Farm Management Extension Agents and Fieldmen for the Association; Loppnow is Undergraduate Research Assistant, University of Minnesota-Twin Cities. The authors wish to thank Vernon Eidman, Dale Nordquist and Kenneth Thomas of the Department of Agricultural and Applied Economics, University of Minnesota, for review, and Carol Hansen for secretarial support.

EXPLANATORY NOTES FOR THE WHOLE-FARM REPORTS

Tables 1 through 5 and 7 include the same number of farms, which were all of the farms whose records were judged to be of sufficient quality to be included in the overall report. Table 6, the Comparative Financial Statement, includes only sole proprietors. Partnerships and corporations are excluded because some debt is held outside of the business causing potential misinter-pretations of the financial statement. The number of farms included in each of the crop and livestock tables varies because all farms do not have the same enterprises. Also, some farmers' records were complete enough to be included in the whole-farm tables, but at times, these same farmers' crop or livestock records were not complete enough to include in the respective crop or livestock tables.

Rounding of individual items for the report may have caused minor discrepancies with the printed totals which are calculated before rounding.

Table 1. Detailed Farm Profit or Loss Statement

This statement is a summary of income, expenses, and resultant profit or loss from farming operations during the calendar year.

The first section of Table 1 lists cash farm income from all sources. There are three possible sources of cash income from crops. The first is income from cash sales. The second is income from crop enterprises labeled as "CCC or Reserve" or "Sealed," which refers to crops stored under government programs with the crop value treated as income for the year in which the crop was stored. If the crop value had not been entered as income when it was stored, then its entire value would be treated as income in the year it was sold. The third is "Net Government Sales," which refers to the difference between income credited in the year a crop was stored and the actual income received at the time it was sold. There are two categories of cash income from livestock sales. "Raised" steer, hogs, and lambs refer to animals raised from birth to market weight on the farm. "Finished" animals refers to those purchased as feeders and fed to market weight. "Other Government Payments" refers primarily to commodity storage payments.

The second section of Table 1 lists <u>cash</u> expenses. "Labor" includes only labor hired. "Interest" includes only interest actually paid. No opportunity charges on farm equity capital or unpaid labor are included.

The difference between "Gross Cash Farm Income" and "Total Cash Expense" is the "Net Cash Farm Income." This is net farm income on a <u>cash</u> basis.

The third and fourth sections of Table 1 deal with non-cash changes in the farm business. The "Inventory Changes" and "Depreciation and Other Capital Adjustments" sections are used to convert the cash income statement (Net Cash Farm Income) derived from the first two sections into an accrual income statement. The "bottom line," labeled "Profit or Loss," represents the return to the operator's and family's unpaid labor, management, and equity capital (net worth). In other words, it represents the return to all of the

resources which are owned by the farm family and, hence, not purchased or paid a wage. However, it does not include any debt forgiveness or asset repossessions.

Table 2. Inventory Changes

This is the detailed statement of inventory changes which is summarized in Table 1. It includes beginning and ending inventories and the calculated changes.

Table 3. Depreciation and Other Capital Adjustments

This is the detailed statement of depreciation and other capital adjustments which is summarized in Table 1. It includes beginning and ending inventories, sales, repossessions, purchases, and depreciation.

Table 4. Farm Profit After Extraordinary Items

The value of debts forgiven which exceeds the value of assets repossessed is technically income to the business. (Whether it is taxable or not depends upon the specific situation.) The average values of debts forgiven and assets repossessed are reported in Table 4 and used to adjust the "Profit or Loss" from Table 1.

Table 5. Profitability and Liquidity Analysis

Various measures of performance are calculated for the farms in this report. These include measures of profitability and liquidity. (Solvency measures are in Table 6.) In Tables 1-4, no opportunity costs are used. In Table 5, opportunity costs for labor, capital, and management <u>are</u> used. The measures and their components are described below.

Profitability

"Labor and management earnings" equals "Profit and Loss" from Table 1 minus an opportunity interest cost of 6% on average farm net worth.

"Rate of return on investment" is the "Return to farm investment" divided by "Average farm investment."

"Rate of return on net worth" is the "Return to farm net worth" divided by "Average farm net worth."

"Net profit margin" is the "Return to farm investment" divided by "Value of farm production."

"Asset turnover rate" is the "Value of farm production" divided by "Average farm investment."

"Interest on farm net worth" is the "Average farm net worth" multiplied by a 6% opportunity interest cost charge.

"Farm interest (accrual)" is the accrued interest cost so it will be different from Table 1.

"Value of operator's labor and management" is its opportunity cost. It is evaluated using the suggested values listed in Table 12.

"Return to farm investment" is calculated by adding "Farm interest paid" and "Profit or Loss" and then subtracting the "Value of operator's labor and management."

"Average farm investment" is the average of beginning and ending total farm assets.

"Return to farm net worth" is calculated by subtracting the "Value of operator's labor and management" from "Profit or loss."

"Average farm net worth" is the average of beginning and ending farm net worth.

"Value of farm production" is gross farm income minus feeder livestock purchased and adjusted for inventory changes in crops, market livestock and breeding livestock.

Liquidity: Cash Basis

"Family Living and Taxes Paid" is the total family use of cash from Table 8. Thus, it is an average of the number of farms in Table 8 which is different from the number of farms in Table 5.

"Cash available for intermediate debt service" on the cash basis is "Total net income" minus "Family living and taxes paid" and "Real estate principal payments."

"Average intermediate debt" is the average of beginning and ending intermediate farm liabilities.

"Years to turn over intermediate debt" is "Average intermediate debt" divided by "Cash available for intermediate debt service." If either the cash-based or accrual-based "Cash available for intermediate debt" is a negative number, debt repayment is not possible because of negative cash flow and "Years to turn over intermediate debt" cannot be calculated.

"Cash expense as a percent of income" is "Total cash expense" divided by "Gross cash farm income."

"Interest as a percent of income" is "Interest paid" divided by "Gross cash farm income."

Liquidity: Accrual Basis

"Cash available for intermediate debt service" on the accrual basis is "Total net income" minus "Family living and taxes paid" and "Real estate principal payments" adjusted for inventory changes listed in Table 2.

"Accrual expense as a percent of income" is "Total cash expense" divided by the sum of "Gross cash farm income" and "Inventory change."

"Interest as a percent of income" is the sum of "Interest paid" and accrued interest which is then divided by "Gross cash farm income."

Table 6. Comparative Financial Statement

The beginning and ending net worth statements and solvency measures are presented for sole proprietors only in Table 6. Current assets are valued at market price at the time of the inventory which is January 1, and December 31, for the beginning and ending inventories, respectively. Intermediate and long-term assets that are depreciable are valued at cost remaining (amount remaining to be depreciated, plus salvage value). Raised breeding livestock is valued at conservative market replacement costs. Land is valued at conservative market price (by county average) for the Southwest Association and at cost basis for the Southeast Association.

Table 7. Crop Production and Marketing Summary

This table contains three sections. The first section reports average acreages by land use. The next two sections show average price received and average yields for major crops. These tables are sorted according to the whole-farm profit (or loss) while the crop tables are sorted by return to overhead costs.

Table 8. Household and Personal Expense

For those farms that kept records, the household and personal expenses are summarized in Table 8. The farms are grouped in the same ranking as in Table 1. Since not all farms keep these records, the numbers may be different for each group. Averages are determined by the number of farms keeping these records.

Table 9. Nonfarm Income and Operator Information

Table 9 reports the averages for the number of operators per farm, the operator's age, and the number of years farming. This table also reports the income from nonfarm sources which is included in a farmer's total net income. Not all farms have nonfarm income, but the figure reported is the average over all farms not just those reporting nonfarm income. Also reported are the beginning and ending values for nonfarm assets for all farms (not just sole proprietors as in Table 6).

EXPLANATORY NOTES FOR CROPS TABLES

The "Crop Enterprise Analysis" tables show the average physical production, gross return, direct costs, overhead costs, and net returns per acre. All costs are actual costs; no opportunity costs are included. The "Net Return per Acre" is the "Gross Return per Acre" minus the direct and overhead costs. The "Net cash flow generated for principal payments, income taxes, and family living" is calculated as "Net return per acre" plus "Depreciation." (All overhead costs except depreciation are assumed to be cash costs.) The last section of each crop table contains economic efficiency measures which provide useful standards or goals for individual managers and the returns to overhead and net return per acre including government payments.

There are potentially three tables for each group depending on the farmer's tenure on the land. The crop tables may be for (1) owned land, (2) cash rented land, or (3) share rented land. It is possible for an individual farm to have data in all three tables if all three land tenure categories are represented in that farm business. When there are less than five farms with a particular crop and tenure, that table is not included in the report. Farms are classified into low 20% or high 20% on the basis of returns to overhead costs. The classification is done separately for each table, i.e., an individual farm may be in the low 20% for one crop, the high 20% for a second, and the middle 60% for a third. When there are less than 25 total farms with any particular crop and farmer's tenure, only overall averages are presented.

Several cost items, such as "utilities," "hired labor," and "interest paid," are listed under both "direct" and "overhead" costs because some farm records have been kept in enough detail to permit assigning these costs specifically to that crop. "Direct Lease Payments" refers to non-land inputs or resources leased and used only in that crop enterprise and not listed elsewhere under direct costs; the most common example is the lease of equipment that is crop specific. "Land Rent" is listed as a separate category and is assigned as a direct cost for each crop enterprise because it is identifiable with the specific crop. In the case of double cropping, one-half of the rent is charged to each crop. Machinery lease payments are for leased machinery used on more than one crop. Interest payments are likewise divided into those incurred directly for a specific crop and those that are not.

The "unit" referred to in the "Value per unit" and the efficiency measures at the bottom is the unit of measurement for the principal product from this enterprise. It is "bushel" for corn, soybeans, wheat and oats. It is "ton" for corn silage and hay. It is "dollar" for set aside where "dollar" is the estimated cash deficiency payment received from the government.

To estimate the return to crops in the government programs, the return to overhead and the net return including setaside income (and expenses) is estimated and included in the appropriate tables.

Rounding of individual items for the report may have caused minor discrepancies with the calculated totals.

EXPLANATORY NOTES FOR LIVESTOCK TABLES

The "Livestock Enterprise Analysis" tables show the average physical production, gross returns, direct costs, overhead costs, and net returns per budget unit. All costs are actual costs; no opportunity costs are included. The "Net Return" to the enterprise is the "Total Return" minus the direct and overhead costs. The "Net cash flow for principal payments, income taxes, and family living" is the "Net Return" plus "Depreciation" and minus "Home Use," "Fed," and "Butchered." The last section of each livestock table contains both economic and technical efficiency measures which are particularly useful to individual managers in assessing their performance as compared to their peers.

The "Dairy (Milking Herd)" enterprise contains the information for only the milking herd (which includes dry cows). "Dairy Heifers" are those heifers kept for replacement into the milking herd. "Dairy Heifers and Feeder Stock" includes replacement heifers and dairy animals intended for feeding and slaughter. "Dairy Steers" includes only steers for feeding. The "All Dairy" table includes those farms in the "Dairy (Milking Herd)", "Dairy Heifers", and "Dairy Heifers and Feeder Stock" tables; it does not include "Dairy Steers."

The "All Beef Finishing" table includes the FINANX codes for beef, steer calf, heifer calf, yearling steer, and yearling heifer finishing.

When there is a sufficient number (i.e., more than 24), farms are divided into low 20% and high 20% on the basis of returns to overhead costs. The classification is done separately for each livestock enterprise.

"Lbs. feed per 1b. of gain" is the 1bs. of total feed divided by "Gross production." The total feed is calculated by adding total pounds of feed. For grains, these pounds per unit are used: corn, 56; oats, 32; barley, 48; grain sorghum, 56; wheat, 60; and millet, 48. For these roughages, the pounds are calculated by these factors: alfalfa haylage, 0.5; corn silage, 0.33; oatlage, 0.5; and sorghum silage, 0.33; and small grain silage, 0.33.

The calving and weaning percentages are calculated as the number of calves which are calved and weaned, respectively, divided by the number of cows which are supposed to bear young.

Rounding of individual items for the report may have caused minor discrepancies with the calculated totals.

EXPLANATORY NOTES FOR SUMMARY TABLES

A better picture of this year's profitability, liquidity and solvency can be seen by comparing this year to previous years (Table 13). To make these comparisons on an equal footing, previous years are expressed in constant dollars using the Consumer Price Index (CPI-U) from the U.S. Department of Commerce. All items are calculated in the same way as in the whole-farm analysis section except for the rates of return and other percentages. The main difference in the calculation is the use of the previous year's ending assets and liabilities. This is necessary due to the use of the same land value for beginning and ending asset valuation within a year. The rate of return to total investment shows how well a farmer is doing in relation to other businesses; it answers the question of how well the farmer is managing the entire assets of the business. The rate of return to owner's equity shows how well a farm is doing in relation to the farmer's alternative investments; it answers the question of how well the farmer is managing his or her own equity investment. The two rates are calculated by these equations:

Rate of return on = <u>profit + interest - average wage</u> * 100 total investment average total investment

Rate of return on = <u>profit - average wage</u> * 100 equity average equity

The average wage is the average nonfarm wage in the region and is calculated from data gathered by the Minnesota Department of Jobs and Training. These rates differ from Table 5 because of the calculation formula and the use of the previous year's ending asset and equity value.

The debt-to-asset percentage measures the degree to which assets are financed by external sources. It measures the solvency of the business. The year-end total farm assets is divided by year-end total liabilities to obtain this measure. The Southeast Association has continually used the cost basis of asset valuation. Between 1978 and 1979, the Southwest Association switched from the cost basis to the market-value method of asset valuation.

Interest as a percentage of gross cash farm income and of cash expenses evaluates management flexibility. The asset turnover ratio indicates how efficiently assets are generating gross business earnings; it is calculated as the value of production divided by the average farm asset value.

To evaluate this year's financial performance in other ways, the whole-farm analysis is summarized on a county basis (Table 14), on a gross income category basis (Table 15), and by type of farm (Table 16). Farms are classified as a certain type (e.g., dairy) on the basis of having 70 percent or more of their gross sales from that category. To show productivity differences between counties, the enterprise reports for corn and soybeans on cash rented land are reported by county (Tables 17 and 18, respectively).

^{*} Not available.

^{**} Preliminary estimates for 1987.

^{***} In the Southwest, the 1979 rates of return are calculated using the ending asset and liabilities of 1978 because the asset valuation method changed between 1978 and 1979.
