## INDEX

This index is intended mainly to complement the Contents List. For locating the main subjects of the conference and the ways in which they were treated the contents list is likely to be the better aid. The index is likely to be the more useful in locating references to items which appeared in a number of papers or discussion sessions and, to a lesser extent, to items which arose more or less incidentally to the particular line of discussion being followed. Where a subject is frequently referred to in a paper or report each individual reference is not given. Names of countries are included only if they appear in connection with some major activity; entries in statistical tables are generally not indexed. Names of paper readers and openers of discussions are indexed. Other names are included only if this is convenient for reference because they have become associated with some concept, research area, etc. (for example, Keynes, Meadows (model), etc.).
