Agricultural Commissioner  
Director of Weights and Measures  
Director of Animal Control

HARRY A. KRUG  
Assistant Agricultural Commissioner  
Assistant Sealer  
of Weights & Measures

TO: Clare Berryhill, Director of Food and Agriculture, and the Honorable Board of Supervisors of Merced County:

Al Bardini, Chairman  
Harvey Fonseca  
Albert E. Goman  
Ann Klinger  
Fred Wack

It is my pleasure to submit the 1985 Agricultural Crop Report as required by Section 2279 of the California Food and Agricultural Code.

After 1984's upsurge in gross agricultural value following three years of decline, Merced County's gross agricultural value has again dropped, coming in at \$812,418,000. This is \$27,609,000 less than the all time high for 1984. Even though yields increased for many commodities, prices were lower for most, contributing to a downturn in total gross value. Overall, weather conditions were good, but an unsettled spring, a summer hot spell in excess of 20 days over 100°F and early winter rains affected some 1985 crops.

I must emphasize that values shown in this report do not reflect net income to producers, but gross returns with no consideration given for the cost of production. It is well known that the farming sector, in general, continues in the throes of an economic crisis.

The brightest spot was the number one commodity, milk, bringing in \$226,115,000, up \$17,958,000. This was more than double the number two commodity, chickens, at \$102,654,000, which increased \$11,078,000. Cattle and calves valued at \$61,505,000, moved up to third place, though declining in value by \$6,198,000 due to significantly lower prices.

Other commodities showing the largest gains in value were market tomatoes at \$22,866,000, due to increased acreage, but lower price; alfalfa hay at \$43,489,000, as a result of more acreage and slightly higher price; and clingstone peaches at \$14,099,000, due to increased acreage, production and value. Sheep and lambs were up \$1,162,000, and bean seed \$1,192,000.

Almonds, after posting the largest single increase in total income in 1984, had the greatest income loss, dropping to \$58,752,000, down \$20,624,000 due to lower price and production.

Cotton, after rebounding from the PIK Program, fell \$6,670,000 to \$40,230,000 due to fewer acres and lower price, despite higher yields. Cotton seed dropped by \$3,347,000 as it's worth was 40% less. Wine grapes valued at \$13,873,000, lost \$4,818,000 mainly due to 2,785 abandoned acres. Sugar beets declined to \$10,339,000, because acreage was 1/3 less, however, production was up.

Other significant losses were in sweet potatoes at \$19,834,000, down \$2,969,000; apricots at \$463,000, losing \$2,251,000, due to lack of market and price; dry figs at \$1,184,000, down \$2,018,000, as the result of a large drop in yield and price; nursery production at \$7,239,000, a decline of \$1,800,000; and cantaloupe melons at \$12,684,000, losing \$1,519,000, due to lower price.

I want to thank the various individuals, companies and governmental agencies, who gave their time in providing the information necessary to make this report possible. Special recognition goes to my staff, who have diligently collected information for this report, especially, Richard Carlson, Agricultural Biologist and Standards Inspector, who was responsible for compilation of this data.

Respectfully submitted,

Michael J. Tanner  
Agricultural Commissioner

TO: Clare Berryhill, Director of Food and Agriculture, and the Honorable Board of Supervisors of Merced County:

Ann Klinger, Chairman  
Michael Bogna  
Wyatt "Dub" Davenport

Albert E. Goman  
Anthony Whitehurst

I am pleased to submit the 1986 Agricultural Crop Report in accordance with Section 2279 of the California Food and Agricultural Code.

County agriculture is showing signs of a rebound and has reached a new agricultural Gross Value high of \$849,581,000. This is \$28,463,000, a 3.46% increase over the adjusted 1985 Gross Value of \$821,118,000 which placed Merced County sixth among the 58 Counties in California.

Factors having an adverse bearing on this year's agricultural report include the Dairy Herd Termination and other Government Production Control Programs, Raisin Grape Diversion Program, farm bankruptcies and foreclosures. The spring weather conditions caused poor pollination and crop set of fruit and nut crops in general. However, spring and summer temperatures were good with excellent fall harvesting weather and no significant rain for the remainder of the year.

The brightest spots were in fruit and nut crops, up \$21,344,000, livestock and poultry, up \$15,854,000 and vegetable crops, up \$7,613,000. The largest gain posted was in miscellaneous fruit and nut crops, up \$12,389,000, due to production and value increases in mainly apples, fresh peaches and table grapes. Chickens, the number two commodity increased \$10,386,000 to \$113,040,000. Almonds maintained its third place standing at \$71,400,000 even though production was disastrous, down 61.5% but price was up 63%.

Commodities showing significant increases in value were cantaloupe melons at \$21,815,000, up \$9,131,000 due to increased acreage and price and sweet potatoes at \$27,965,000, up \$8,326,000 due to higher production and price. Sugar beets were up \$4,353,000, chicken eggs \$4,322,000, pistachios \$4,187,000, cattle and calves \$3,698,000, dry figs \$2,691,000, other melons \$2,559,000 and walnuts \$2,014,000.

Milk, after several years of steady gains and the number one commodity at \$214,005,000, had the greatest income loss, dropping \$12,110,000 triggered by the Dairy Herd Termination Program and lower prices. Market tomatoes plunged \$8,894,000 to \$13,972,000 as a result of 37% fewer acres and a slight price reduction. Clingstone peaches dropped \$5,766,000 to \$8,333,000 due to less acreage and significantly lower yield and price.

Other commodities showing large losses were wheat at \$2,939,000, down \$3,210,000 due to 35% less acres and lower price and cotton at \$37,298,000, down \$2,932,000 as the result of lower acreage and yield, even though the price was up. Silage corn was down \$2,239,000 and rice \$2,042,000.

I must emphasize that values shown in this report do not reflect net income to producers, but gross returns with no consideration given for the cost of production.

I wish to thank those individuals, businesses and governmental agencies, who gave their time in providing the valuable information necessary to complete this report. Special recognition goes to my staff, who diligently collected information for this report, especially, Richard Carlson, Agricultural Biologist/Standards Inspector, who was responsible for compilation of this data.

Respectfully submitted,

Michael J. Tanner  
Agricultural Commissioner

TO: Jack C. Parnell, Director of Food and Agriculture, and the Honorable Board of Supervisors of Merced County:

Michael Bogna, Chairman  
Wyatt "Dub" Davenport  
Ann Klinger

Dean Peterson  
Anthony Whitehurst

I am very pleased to submit the 1987 Agricultural Crop Report as required by Section 2279 of the California Food and Agricultural Code.

County agriculture once again exhibited many healthful economic signs after five years of struggling to survive and overall decline. For the second year in a row a new record agricultural Gross Value has been reached amounting to \$942,482,000. This is \$95,613,000, an 11.3% increase over the adjusted 1986 Gross Value of \$846,869,000 which had maintained Merced County's sixth place ranking among the 58 California Counties.

Reasons for a healthier agricultural report, to name a few, were due to an excellent growing year; good planting and harvesting weather; increased planted acreage; higher production for many crops and commodities; ending of the Dairy Herd Termination Program; stronger export and domestic markets; generally improved commodity prices; stabilized interest rates; and slowed farm foreclosures and bankruptcies.

The highlight in 1987 was in almonds with the largest crop ever produced, a record 1,760 pounds per acre County average, worth \$119,280,000. Yield was up almost 70% from the prior year's disastrous production, however, the price fell by 50%. Chickens, the number two commodity in value increased \$15,954,000 to \$128,647,000 due to higher production and price. Cotton made a strong come back, up \$14,506,000 for a total value of \$51,804,000 and fourth place behind almonds. This was due to a 19% production increase, for a County record of 1,220 pounds per acre, acreage up over 9% and better price.

Milk, the number one commodity in the County at \$224,128,000 increased \$10,123,000 as production was up despite the Dairy Herd Termination Program, and lower prices. Other commodities showing the greatest gains in value were market tomatoes at \$22,748,000, up \$8,776,000 due to a 62.5% acreage increase but lower price; chicken eggs up \$6,122,000 to \$27,429,000 with a 43.4% production increase even though price was down 11%; sugar beets at \$19,439,000 up \$4,747,000 with a 35.5% acreage increase; and sweet potatoes at \$25,269,000 rose \$4,119,000 due to higher acreage, yield and value.

Cattle and calves posted the greatest loss, falling \$19,146,000 to \$46,057,000 as the result of lower gain and the number of head down 10%. Even though prices improved, total value pushed cattle and calves to fifth place. Cantaloupe melons dropped \$10,887,000, almost 50% in total value, to \$10,928,000 due to a 40% acreage reduction and 18.4% price decline.

Other commodities showing significant losses were miscellaneous fruit and nut crops at \$19,085,000, down \$2,998,000; other melons at \$2,141,000, down \$1,517,000 because of lower yield and price; and pistachios at \$4,704,000, a decline of \$1,356,000 due to lower production because of alternate bearing.

I must emphasize that values in this report do not reflect net income to producers, but gross returns with no consideration given for the cost of production.

I wish to thank those individuals, businesses and governmental agencies, who gave their time in providing the valuable information necessary to complete this report. Special recognition goes to my staff, who diligently collected information for this report, especially, Richard Carlson, Agricultural Biologist/Standards Inspector, who was responsible for compilation of the data.

Respectfully submitted,

*Michael J. Tanner*

## DEPARTMENT OF AGRICULTURE

2139 WEST WARDROBE AVENUE  
TELEPHONE (AREA CODE 209) 385-7431  
MERCED, CALIFORNIA 95340-6495

TO: Jack C. Parnell, Director, California Department of Food and Agriculture, and the Honorable Board of Supervisors of Merced County;

Anthony Whitehurst, Chairman  
Wyatt "Dub" Davenport  
Ann Klinger

Michael Bogna  
Dean Peterson

I am pleased to submit the 1988 Agricultural Crop Report as required by Section 2279 of the California Food and Agricultural Code.

A new record agricultural gross value has been set in Merced County for the third year in a row of \$973,177,000. This is \$30,695,000, a 3.26% increase above last year's gross value which maintained the County's sixth place ranking among California's 58 Counties. Our agriculture industry has rebounded and stabilized in most sectors. The financial picture is much improved and economy bright compared to several of the recent years.

The largest gain in 1988 was for chicken fryers and broilers, the number two commodity in value, worth \$144,725,000. Production was up over 16%, nearly 12,000,000 birds, with price slightly reduced. Cantaloupes made a strong showing up \$6,601,000 to \$17,529,000, due to a 37.9% acreage increase and higher price. Cattle and calves are making a come back, after last year's large loss, up \$5,417,000 to \$51,474,000 because of price being up 26% even though number of head were down.

Turkeys increased \$5,047,000 to \$24,572,000 as production was up but price slightly less. Nursery products worth \$13,248,000 posted a 60.7% gain as production was up and prices were better.

Pistachios, on their up year, gained \$3,836,000 as production increased 125% but price fell 19.4%. Cotton seed was up \$3,033,000 to \$10,483,000 because cotton acreage reached an all-time high of 70,200 acres. Cotton lint production and price were down, however.

Almonds, after last year's largest ever crop, plunged \$15,120,000 for the greatest loss of all commodities but still maintains its third place ranking at \$104,160,000. Chicken eggs dropped \$10,312,000 to \$17,117,000 as a result of lower production and fractionally higher price.

Milk continues to be the County's number one commodity valued at \$218,023,000 but fell by \$6,105,000 as a result of lower prices. Other commodities showing significant losses were miscellaneous fruit and nut crops at \$15,886,000, down \$3,199,000; sugar beets at \$16,600,000, lower by \$2,839,000 due to an 18.8% acreage decline even though price stronger; and sweet potatoes at \$22,599,000 dropped \$2,670,000 as a result of 26.6% lower production but price up over 15%.

Two new categories have been included in the crop report for 1988. Aquaculture is being reported for the first time and is valued at \$3,147,000. The second category is titled Other Agriculture and includes firewood, cogeneration fuel and manure, boosting the gross agricultural value by \$8,731,000.

I must emphasize that values in this report do not reflect net income to producers, but gross returns with no consideration given for the cost of production.

I wish to thank those individuals, businesses and governmental agencies, who gave their time and assistance in providing the valuable information necessary to complete this report. Special recognition goes to my staff, who diligently collected information for the report, especially, Richard Carlson, Agricultural Biologist/Standards Inspector, who was responsible for compilation of the data.

Respectfully submitted,

Michael J. Tanner  
Agricultural Commissioner

TO: Henry J. Voss, Director, California Department of Food and Agriculture, and the Honorable Board of Supervisors of Merced County:

Dean Peterson, Chairman  
Wyatt "Dub" Davenport  
Ann Klinger

Michael Bogna  
Anthony Whitehurst

I am extremely pleased to submit the 1989 Agricultural Crop Report, the fiftieth, as required by Section 2279 of the California Food and Agricultural Code.

It is with great pride that I am able to announce a record smashing agricultural gross value of \$1,053,108,000 for Merced County. We have broken the magical one billion dollar barrier to become the sixth County in California of the 58 Counties to do so, and the fourth of the eight San Joaquin Valley Counties.

This year, to commemorate the 50th Annual Crop Report compiled by this office, we are featuring the first official report issued by the Agricultural Commissioner, Charles H. Kinsley, in 1939. Mr. Kinsley was Merced County Agricultural Commissioner from 1933 to 1945. He then joined the California Department of Food and Agriculture as a Regional Coordinator, retiring after 19 years in 1964. In that capacity, he served as liaison between the County Agricultural Commissioners and the State Department of Food and Agriculture. Mr. Kinsley was highly respected and dedicated to California agriculture.

Without a doubt, the Dairy Industry's production of milk is the County's number one agriculture industry in value at \$259,159,000. This was a \$41,136,000 increase due to higher production and price. Milk represents 24.6% of the total agriculture value. Chicken fryers and broilers, the number two commodity with the second highest gain, increased to \$161,295,000, up \$16,570,000. Price was fractionally up with production up over six million birds.

Market tomatoes made a strong showing for the second year in a row gaining \$13,558,000 advancing to \$35,378,000 due to increased acreage and price. Sweet potatoes enjoyed a good year increasing in value to \$34,776,000, up 35% due to 920 more acres and production up 29.7%. Turkeys increased to \$34,015,000 up \$9,443,000 as a result of 954,000 more produced and price slightly up.

Increased value of significance was also realized in the production of alfalfa hay, processing tomatoes, corn silage, sugar beets, silage (other), chicken eggs, freestone peaches and wine grapes.

Almonds, for the second year in a row, suffered the greatest loss of all commodities dropping \$23,960,000 to \$80,200,000 still retaining its third place ranking. This was due to a decline in production of 17.7% and price 12%. Cantaloupes, following a good year, plunged to \$10,109,000 losing \$7,420,000 as a result of less acreage, production down 40.5% and lower price.

Cattle and calves after making a gain in 1988, fell by \$5,690,000 to \$45,784,000 as numbers were down 12,000 head and price by 16.9%. Pistachios, on their alternate bearing year, dropped by \$4,835,000 as production was down 70% but price up 32%. Other significant losses occurred in alfalfa cubes and miscellaneous frozen fruit.

Merced County agriculture has made great strides and changed emphasis over the last 50 years while going from a twenty-one million to a one billion dollar industry. This report addresses the acreage, production and gross value of agricultural production in Merced County. It does not attempt to reflect net farm income or costs of production and marketing. This report also emphasizes an average production and average value of gross receipts. Value is based on farm gate prices except for fresh packed commodities which reflect an FOB, freight on board price.

I wish to express my sincere appreciation to those who have provided the information and assistance necessary for my staff to compile this crop report under the direction of Richard Carlson, Agricultural Biologist and Standards Inspector. My thanks to the growers of Merced County who truly make AGRICULTURE our number one and most valued industry.

Respectfully submitted,

*Michael J. Tanner*

Michael J. Tanner  
Agricultural Commissioner

## ANNUAL REPORT OF AGRICULTURE

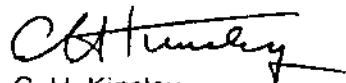

1939

We have attached hereto a statistical survey of Merced County agriculture. This is the first official survey which has been made by this office for a number of years because of lack of funds, making it impossible for us to carry on work of this character with the accuracy which we feel should characterize any statistics issuing from an official source. Chapter 317, Statutes of 1939, however, requires that the commissioner compile reports of condition, acreage, production and value of agricultural products in his county. The statute also authorizes the commissioner to publish such statistics and requires that a copy thereof be transmitted to the Director of Agriculture.

In view of this legislative mandate, Senior Inspector E. M. Lilley of the Merced County Department of Agriculture was assigned the task of gathering, compiling, and checking the necessary data. This, we feel, Inspector Lilley accomplished in a very creditable manner, at the same time recognizing that an absolutely accurate report of this kind can only be compiled on the basis of more extensive surveys of the sources of information than we were able to give with the funds and manpower which we could spare from regulatory activities.

In studying this report one should always keep in mind the fact that it is not the compilation of the net income of agriculture in Merced County. For instance, we have computed the value of alfalfa hay produced in this county as being \$3,226,728.00 and the value of milk as \$4,510,000.00. However, the bulk of the alfalfa hay produced in Merced County was consumed by dairy cattle within the county and, therefore, became an item of cost in the production of the milk and beef resulting therefrom. We have, wherever possible, given the farm value or the value f.o.b. local shipping point. In some cases, however, it has been impossible to do this because of the fact that such commodities as wine grapes are frequently sold delivered at the winery. In the case of beef cattle, sheep and apiary products, any figures we might compile would be subject to criticism because of the semi-migratory character of such businesses.

Respectfully submitted,

C. H. Kinsley  
Agricultural Commissioner
