Introductory Note to List of Publications

1960-1962

The following list of publications represents the major research activities of the agricultural economics group in the California Agricultural Experiment Station. The list is not complete in the sense that various items have been omitted either because they have been superseded by later publications or because essentially the same information is available in other items included in the list. Yet the list is sufficiently comprehensive so that it serves as a representative account of the publications which have been issued during the period covered. The list may serve not only as a record of published materials but also as a reference guide to those who are interested in sources on various topics in the area of agricultural economics research.

The list of publications has been compiled so that it is composed of two parts. Part I includes all of the items, classified into various economic categories, and for that reason titled as Economic Classification. Part II, titled as Commodity Classification, includes only those items which pertain explicitly to particular farm products, with the titles on a single group of products brought together under a single heading. This arrangement is presented with the view of facilitating the use of the publications list.
