California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

Lake County

1970-1981

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

Carl W. Denner, Clearlake Oaks
Wesley O. Lampson, Lakeport
Donald Martinelli, Upper Lake
Earle W. Wrieden, Middletown'

Gentlemen:

In accordance with Section 2279 of the California Agricultural Code, I respectfully submit the Annual Crop Report for Lake County for the year 1970.

Extremely cold weather in the spring of 1970 caused considerable damage to fruit crops. Pears were reduced to approximately 50% of the 1969 yield. Prunes and almonds were almost completely damaged. Grapes were severely injured and show an increase because of price and increased acreage rather than production.

My thanks to the growers, shippers, and all others who contributed information necessary for this report.

Sincerely,

A handwritten signature in cursive script that reads "Charles L. Geoble".

1971 LAKE COUNTY AGRICULTURAL CROP REPORT

Mr. William F. Cowan
Acting Director of Agriculture

Honorable Board of Supervisors
Lake County

- Wesley O. Lampson, Chairman, District 4
- Earle W. Wrieden, District 1
- Carl W. Denner, District 2
- Donald Martinelli, District 3
- Junior C. Wilds, District 5

Gentlemen:

In accordance with Section 2279 of the California Agricultural Code, I respectfully submit the Annual Crop Report of Lake County for the year 1971.

The value of pears was up slightly due to increased tonnage over 1970 but lower prices kept this figure down somewhat. Walnut tonnage was also good but prices were low on the average because of frost conditions in October 1971. There was no almond crop due to frost. Grapes made a substantial gain, from 187 tons in 1970 to 409 tons in 1971. Livestock prices and production were both up for a substantial gain in that category.

All figures shown on the report were based on gross sales and in no way reflect the income to growers and producers.

My sincere thanks to all shippers, growers, and producers who contributed information necessary to compile this report.

Sincerely,

Charles L. Geoble
Charles L. Geoble

Honorable Board of Supervisors
Lake County

Donald Martinelli, Chairman, District 3
Donald Ellis, District 1
Carl W. Denner, District 2
Olga Hudson, District 4
Junior C. Wilds, District 5

Gentlemen and Mrs. Hudson:

In accordance with Section 2279 of the California Agricultural Code, I submit the Annual Crop Report of Lake County for the year 1972.

Pear tonnage and prices resulted in good conditions for this commodity. Grape acreage has increased but frost damage to grapes in April, 1972 reduced the yield. Walnuts also suffered frost damage and reduced tonnage to about 70% of normal. All other commodities held steady. Egg value was up due to an increase in price.

The overall crop report shows a gain of \$2,239,250 over the 1971 figures. All values shown on the report were based on gross sales and in no way reflect the income to growers and producers.

My sincere thanks to all shippers, growers, and producers who contributed information necessary for this report. This report was compiled by Don Tompkins, Deputy Agricultural Commissioner.

Respectfully submitted,

A handwritten signature in cursive script that reads "Charles L. Geoble".

Animal Control Director
Air Pollution Director

March 1974

Mr. C. B. Christensen
Director of Food & Agriculture
Honorable Board of Supervisors
Lake County

Gentlemen and Mrs. Hudson:

In accordance with Section 2279 of the California Agricultural Code, I submit the Annual Crop Report of Lake County for the year 1973.

I would like to emphasize the increase in the overall value of pears. Due to good climatic weather conditions in 1973, the pear tonnage was up substantially which, coupled with good prices, resulted in the increase. The growers were fortunate in that frost protection was required only three nights. Prune and walnut tonnages increased after a disastrous season the year before because of frost damage. Grape acreage doubled and tonnage tripled because of young vines coming into production. Almonds produced well in 1973 after zero tonnage the year before due to frost.

The alfalfa hay total was up substantially because of tonnage value; all other field crops remained about the same. Most of the mile crop was lost because of early flooding in the Tule Lake basin before harvesting.

Livestock values increased while production remained stable. Recreational horses have created a new agricultural income in the sale of riding horses which has added to the crop report. There was only a slight increase in egg production during 1973.

Agriculture, the number one industry in Lake County, leaped 31% for a total of nearly \$7 million dollars over 1972 figures, resulting in a grand total for 1973 of \$22,155,000.

My sincere thanks to all shippers, growers, and producers who contributed information necessary for this report which was compiled by Don Tompkins, Deputy Agricultural Commissioner.

Respectfully submitted,

Charles L. Geoble
Agricultural Commissioner

RESPONSIBILITIES OF THE AGRICULTURAL COMMISSIONER

The Agricultural Commissioner, under state law, is responsible for the enforcement of provisions of the Agricultural Code, the Administrative Code pertaining to agriculture, and other state and federal regulations for the benefit of the agricultural industry, related industries and the consumers. He is directly responsible to the Board of Supervisors who may assign additional duties. The agricultural commissioners in the state are under the general direction of the State Director of Agriculture.

Commissioners, deputies and inspectors (or biologists) are qualified through education and training. They are required to pass state examinations to obtain certificates in the various agricultural fields. County personnel are required to attend a number of training sessions each year. Training is by the State Department of Food and Agriculture and is necessary to ensure that agricultural programs are carried out on a uniform basis in the state.

The functions of the Agricultural Department including a brief description of each follow:

Apiary Inspection

The California Agricultural Code states that all apiary owners must register colonies in possession with the Agricultural Commissioner in the county where the bees are located each year. Apiaries are inspected regularly for the presence of contagious bee diseases and for conformation to state and local regulations.

Crop Statistics

The Agricultural Commissioner is required by state law to compile an annual report on the value, production and acreage of agricultural products in his county. Weekly crop and livestock reports are made to the State Department of Food and Agriculture.

Egg Quality Control

Includes the enforcement of state and federal laws pertaining to eggs and egg products, and the regulations relating to the preparation, packing, shipping and sale of eggs.

Fruit, Vegetable, Nut and Honey Quality Control

Commodities are inspected at wholesale and retail level for conformation to state laws and regulations relating to the preparation, packing, shipping and sale of the products. Sub-standard products are rejected and removed from sale.

Nursery Inspection

The Agricultural Commissioner is responsible for regular inspection of the nurseries in the county. He enforces regulations pertaining to cleanliness from pests, labeling and grading of stock.

Pest Detection

Pest detection programs are designed to prevent new pests that are not known to exist in the state or of limited distribution in the state, to become established and affect agricultural production. When new pests are detected, eradication programs are begun immediately. Trapping for certain insect pests such as the gypsy moth, Japanese beetle and fruit flies is on an annual basis. Surveys for rodents, noxious weeds and plant diseases are made continually.

Pest Eradication

Eradication techniques are applied immediately when a new plant pest is found. In 1972, two infestations of Purple star thistle were found in Lake County. Infestations were treated with chemicals and the areas will be kept under surveillance for new growth. Other noxious weeds under eradication in Lake County are: Oblong spurge, Scotch thistle, Hoary Cress (White Top) and Iberica thistle.

Pest Exclusion

Incoming shipments of plant materials are inspected at post offices and other terminals as required by federal and state laws. Plant quarantine inspection serves to prevent the movement of plants and other related material without proper certification thereby controlling the spread of plant pests.

Pest Management (Control)

Poison bait for the control of rodents and grasshoppers is mixed and sold at cost by the Agricultural Department. Homeowners, crop producers and others may receive advice on pest control and help with identification of pests through this Department. Klamath weed is under control by biological means.

Pesticide Use Enforcement

Pest Control Operators and Pest Control Advisers must be licensed by the state and registered with the Agricultural Commissioner in each county prior to working in that county. Equipment used by Pest Control Operators is inspected and methods of application of chemicals is observed to ascertain that proper applications are being made and that safety precautions are being followed. Permits for the use of restricted materials are issued by the Agricultural Commissioner. Safe use of pesticides is stressed and reports on the use of pesticides are required.

Seed Inspection

Agricultural, lawn and vegetable seed must comply with labeling and germination standards set forth by the California Seed Law. Inspection is done at retail level in Lake County.

Weed Control (Non-Regulatory)

County roadsides are treated with a soil sterilant every year to prevent the growth of grasses and broadleaf weeds. This makes for better visibility, lessens fire hazard and helps to beautify the roadsides. Blackberries and other brush are controlled along county roads and on other public land by chemical means. The Agricultural Department contracts with special districts in the county for soil sterilization and brush control.

WEIGHTS AND MEASURES

The Agricultural Commissioner in Lake County is also the Director of Weights and Measures. He enforces provisions of the Business and Professions Code and Administrative Code of the State of California that pertain to Weights and Measures.

Functions of the Department of Weights and Measures with a brief description of each function follow:

Device Inspection

Each weighing and measuring device that is used commercially in the county is tested for accuracy at least once a year and more often if the device is in constant use. Devices that are found to be accurate are sealed with an official seal placed in a conspicuous place. If a device is not in compliance, it may not be used until it is adjusted or repaired and another test is made.

Quantity Control

Pre-packaged commodities are weighed for accuracy through statistical sampling. All types of packaged merchandise are sampled including dairy products, bakery goods, meat, beverages, pharmacy products, paper products, hardware and building supplies, textile products and many others. Contents must conform to the labeling on the package. Packages that do not meet this specification are taken off sale and returned to the packer.

Petroleum

Advertising signs in service stations are inspected for conformation to standards set by the state. Gasoline, motor oil, anti-freeze, brake fluid and other petroleum products are tested for standards.

Weighmaster Enforcement

All persons engaged in the business of weighing for hire must be licensed and bonded. Regular inspections of all firms in the weighmaster business in the county are made for conformation to provisions of the weighmaster laws.

Director of Food & Agriculture

Honorable Board of Supervisors
Lake County

Gentlemen and Mrs. Hudson:

In accordance with Section 2279 of the California Agricultural Code, it is my pleasure to submit the 1974 Lake County Agricultural Crop Report.

The overall production value for 1974 is down approximately 2 1/2 million dollars in gross income. Pears account for the largest reduction in dollar value of approximately 2 1/3 million due to a 14 1/2 percent tonnage drop over the previous year. Grapes and Walnuts contributed the balance of the reductions in gross value due to frost damage in May 1974 to both crops and a substantial price decline for the grapes.

Field crops were up because of prices. Livestock was up slightly due to larger head counts offsetting the reduced prices the producers received. The livestock and poultry products remained about the same as the 1973 crop year.

I want to stress that the dollar values submitted are a gross value and in no way reflect the net profit to the grower or producers of any crop or product.

My sincere thanks to all growers, shippers, and producers for their cooperation in supplying statistical data necessary for this report which was compiled by Don Tompkins, Deputy Agricultural Commissioner.

Respectfully submitted,

Charles L. Geoble
Agricultural Commissioner

RESPONSIBILITIES OF THE AGRICULTURAL COMMISSIONER

The Agricultural Commissioner, under state law, is responsible for the enforcement of provisions of the Agricultural Code, the Administrative Code pertaining to agriculture, and other state and federal regulations for the benefit of the agricultural industry, related industries and the consumers. He is directly responsible to the Board of Supervisors who may assign additional duties. The agricultural commissioners in the state are under the general direction of the State Director of Agriculture.

Commissioners, deputies and inspectors (or biologists) are qualified through education and training. They are required to pass state examinations to obtain certificates in the various agricultural fields. County personnel are required to attend a number of training sessions each year. Training is by the State Department of Food and Agriculture and is necessary to ensure that agricultural programs are carried out on a uniform basis in the state.

The functions of the Agricultural Department including a brief description of each follow:

Apiary Inspection

The California Agricultural Code states that all apiary owners must register colonies in possession with the Agricultural Commissioner in the county where the bees are located each year. Apiaries are inspected regularly for the presence of contagious bee diseases and for conformation to state and local regulations.

Crop Statistics

The Agricultural Commissioner is required by state law to compile an annual report on the value, production and acreage of agricultural products in his county. Weekly crop and livestock reports are made to the State Department of Food and Agriculture.

Egg Quality Control

Includes the enforcement of state and federal laws pertaining to eggs and egg products, and the regulations relating to the preparation, packing, shipping and sale of eggs.

Fruit, Vegetable, Nut and Honey Quality Control

Commodities are inspected at wholesale and retail level for conformation to state laws and regulations relating to the preparation, packing, shipping and sale of the products. Sub-standard products are rejected and removed from sale.

Nursery Inspection

The Agricultural Commissioner is responsible for regular inspection of the nurseries in the county. He enforces regulations pertaining to cleanliness from pests, labeling and grading of stock.

Pest Detection

Pest detection programs are designed to prevent new pests that are not known to exist in the state or of limited distribution in the state, to become established and affect agricultural production. When new pests are detected, eradication programs are begun immediately. Trapping for certain insect pests such as the gypsy moth, Japanese beetle and fruit flies is on an annual basis. Surveys for rodents, noxious weeds and plant diseases are made continually.

Pest Eradication

Eradication techniques are applied immediately when a new plant pest is found. In 1972, two infestations of Purple star thistle were found in Lake County. Infestations were treated with chemicals and the areas will be kept under surveillance for new growth. Other noxious weeds under eradication in Lake County are: Oblong spurge, Scotch thistle, Hoary Cross (White Top) and Iberica thistle.

Pest Exclusion

Incoming shipments of plant materials are inspected at post offices and other terminals as required by federal and state laws. Plant quarantine inspection serves to prevent the movement of plants and other related material without proper certification thereby controlling the spread of plant pests.

Pest Management (Control)

Poison bait for the control of rodents and grasshoppers is mixed and sold at cost by the Agricultural Department. Homeowners, crop producers and others may receive advice on pest control and help with identification of pests through this Department. Klamath weed is under control by biological means.

Pesticide Use Enforcement

Pest Control Operators and Pest Control Advisers must be licensed by the state and registered with the Agricultural Commissioner in each county prior to working in that county. Equipment used by Pest Control Operators is inspected and methods of application of chemicals is observed to ascertain that proper applications are being made and that safety precautions are being followed. Permits for the use of restricted materials are issued by the Agricultural Commissioner. Safe use of pesticides is stressed and reports on the use of pesticides are required.

Seed Inspection

Agricultural, lawn and vegetable seed must comply with labeling and germination standards set forth by the California Seed Law. Inspection is done at retail level in Lake County.

Weed Control (Non-Regulatory)

County roadsides are treated with a soil sterilant every year to prevent the growth of grasses and broadleaf weeds. This makes for better visibility, lessens fire hazard and helps to beautify county roads and on other public land by chemical means. The Agricultural Department contracts with special districts in the county for soil sterilization and brush control.

Weights And Measures

The Agricultural Commissioner in Lake County is also the Director of Weights and Measures. He enforces provisions of the Business and Professions Code and Administrative Code of the State of California that pertain to Weights and Measures.

Functions of the Department of Weights and Measures with a brief description of each function follow:

Device Inspection

Each weighing and measuring device that is used commercially in the county is tested for accuracy at least once a year and more often if the device is in constant use. Devices that are found to be accurate are sealed with an official seal placed in a conspicuous place. If a device is not in compliance, it may not be used until it is adjusted or repaired and another test is made.

Quantity Control

Pre-packaged commodities are weighed for accuracy through statistical sampling. All types of packaged merchandise are sampled including dairy products, bakery goods, meat, beverages, pharmacy products, paper products, hardware and building supplies, textile products and many others. Contents must conform to the labeling on the package. Packages that do not meet this specification are taken off sale and returned to the packer.

Petroleum

Advertising signs in service stations are inspected for conformation to standards set by the state. Gasoline, motor oil, anti-freeze, brake fluid and other petroleum products are tested for standards.

Weighmaster Enforcement

All persons engaged in the business of weighing for hire must be licensed and bonded. Regular inspections of all firms in the weighmaster business in the county are made for conformation to provisions of the weighmaster laws.

DON TOMPKINS
Deputy Agricultural Commissioner
Asst. Director of Measurement Standards
Asst. Air Pollution Control Director

Dr. L. T. Wallace
Director of Food and Agriculture

Honorable Board of Supervisors
Lake County

Gentlemen and Mrs. Hudson:

It is my pleasure to submit the 1975 Agricultural Crop Report for Lake County.

In fruit and nut production and values, carry-over of canned pears in various categories and normal tonnages in all pear growing areas resulted in a lower price per ton. Prune production was also up with lower prices. New acreages of grapes and increased production from young vineyards account for 100% increase in tonnage, however, the unit price was lower.

Walnuts experienced good tonnage and a better price than 1974. Frost damage to almonds early in the year, as often occurs in Lake County, reduced production to an almost negligible figure.

In field crops, the total remained about the same with considerable fluctuation in production and prices of the various commodities.

1975 was a bad year for livestock producers. Livestock unit prices were very low although the liveweight totals remained about the same. Poultry prices were equal to 1974.

I want to stress that these figures are GROSS VALUES and in no way reflect the net figures received by the growers and producers.

The Department sincerely appreciates the cooperation of all growers, shippers, and producers in supplying information necessary for this report. My thanks to all who assisted and to Don Tompkins, Deputy Agricultural Commissioner, who was responsible for compiling the report.

Respectfully submitted,

Charles L. Geoble

Charles L. Geoble
Agricultural Commissioner

AGRICULTURE DEPARTMENT PROGRAMS

The Agricultural Commissioner, under State Law, is responsible and required to enforce the provisions of the Agricultural Code, the Administrative Code pertaining to agriculture, and other State and Federal regulations for the protection of the Agricultural Industry, related Industries and the Consumers. In Lake County the Agricultural Commissioner is also responsible as Director of Measurement Standards requiring the enforcement of Provisions of the California Business and Professions Code, Part I, Divisions 5 and 8; and the Administrative Code pertaining to Weights and Measures. The Commissioner/Director of Measurement Standards is directly responsible to the Board of Supervisors who may assign additional duties. The Agricultural Commissioners/Directors of Measurement Standards in the State are under the general direction of the State Director of Agriculture.

A brief description of each function of the Agricultural Department follows:

ENVIRONMENTAL PROTECTION

PEST DETECTION

Pest detection programs are designed to prevent new pests that are not known to exist in the State, or are of limited distribution in the State, from becoming established and affecting agricultural production. Trapping for certain insect pests such as the Gypsy Moth, Japanese Beetle, Khapra Beetle and Fruit Flies, is done by this office on an annual basis. Surveys for rodents, noxious weeds and plant diseases are made continually.

PEST ERADICATION

Eradication techniques are applied immediately when a new insect or weed pest is found. Infestations of Purple Star Thistle, Oblong Spurge, Scotch Thistle, Hoary Cress (White Top), Iberica Thistle and an insect pest - Kuno Scale, occur in Lake County and are under eradication treatment by our Department.

PEST EXCLUSION (PLANT QUARANTINE)

Incoming shipments of plant materials are inspected at Post Offices and other terminals (trucking lines and United Parcel, etc.) as required by Federal and State Quarantine Laws. Plant Quarantine prevents movement of plants and pests without proper treatment or certification, to prevent the movement of plants and other related material thereby controlling the spread of plant pests.

PEST MANAGEMENT (Control)

Home owners, crop producers, livestockmen and others receive advice on pest control and help with identification of pests through this Department. Poison bait for the control of rodents (squirrels, field mice, gophers, pack rats), grasshoppers and certain birds (starlings, linnets, sparrows) is mixed and sold at cost by the Agriculture Department. In addition, we have several starling traps to maintain a trapping program with grape growers during the Spring and Summer. We are conducting biological control on puncture vine and klamath weed with stem and vine weevils and klamath weed beetle. We conduct surveys in pear orchards for any infestations of pear psylla or infections of pear fireblight and require that growers control or eradicate these pests. The authority for many of these pest problems is pursuant to Ag Code Sections 5401 and 5421 or Section 21.44 of Title 50, Code of Federal Regulations, which authorizes the County Agricultural Commissioners to kill or cause to be killed under their supervision, designated migratory birds to safe-guard agricultural crops.

ENVIRONMENTAL PROTECTION - Con't.

PESTICIDE USE ENFORCEMENT

Pesticide uses, storage and applications are a major function of this department. It involves the registration and detailed inspections of State Licensed Pest Control Operators and Pest Control Advisers, their records or written recommendations, safety gear and equipment, pesticide storage facilities, the observing of pesticide applications and the condition or locations and crops involved and the review of use reports of all their jobs. Farmer (grower) pesticide applications, uses, storage, safety gear, medical supervision, emergency care, use reports and re-entry time are under continual surveillance. Pesticide Permits (approx. 600 per year) for use of restricted materials and herbicides are issued by the Agriculture Staff for control of hazardous pesticides above and beyond the many other pesticide uses of lesser toxic materials. Each year requires the staff to investigate a number of reports of loss or reports of pesticide illness and to file responses with either The State Director of Agriculture, Industrial Safety or EPA-Region IX.

A new large area of work was placed on us about 2 years ago by the enactment of AB 246 (Woods) which requires each Agricultural Commissioner to enforce provisions of Pesticide Worker Safety regulation under the Cal-OSHA Laws. This is a very important and time-consuming responsibility placed on us without proper funding or manpower to carry it out. It requires this office to see that employers provide instruction, training and supervision on pesticide uses, that no employer uses persons under 18 years of age for pesticide applications or mixing, that the employer provides for emergency medical care for employees working alone with highly toxic materials. The Inspector must check for protective clothing, safety equipment and procedures, spray equipment modifications (closed fill systems, tight sealed hatches, shield hose systems, shut-off devices, etc.), change room or areas, washing facilities, field re-entry posting and/or waiting periods of various crops and records for proper safety and welfare of all employees working with pesticides. This surveillance and inspection of records, requires nearly one man-year of additional workload.

CONSUMER PROTECTION REGULATION

SEED INSPECTION

Agricultural, lawn and vegetable seed must comply with labeling and germination standards set forth by the California Seed Law. Inspection and quarantine control is done at retail level in Lake County on a continuous basis as required by State regulations.

NURSERY INSPECTION

The Agricultural Commissioner is responsible for regular inspections of both retail and commercial growing nurseries in the county. He enforces the laws and regulations of the Agricultural Code pertaining to cleanliness from pests, labeling and grading of the nursery stock. In-coming (quarantine) nursery stock is sampled for pests and, when found to be clean, is released for sale.

FRUIT AND VEGETABLE QUALITY CONTROL

Fruit, Vegetables and Nuts are inspected at packer, wholesale and retail level for conformation to State Agricultural Code and the regulations relating to the preparation, packing, labeling, quality, shipping and sale of these products. Sub-standard products are rejected and removed from sale. Lake County has nine large packing sheds and several farm source packers that are under inspection in addition to 40 plus retail stores. We have a contract with the Pear Advisory Board to origin inspect fresh pears under the California Marketing Order.

FRUIT AND VEGETABLE QUALITY CONTROL-Con't.

This involves several packing locations each season. The Walnut Control Board has indicated that they wish to contract with us next season for in-shell walnut inspections for compliance with the Walnut Marketing Order.

EGG QUALITY

We enforce State and Federal Laws pertaining to eggs, egg products, egg wire baskets and the regulations relating to the preparation, packing, quality, shipping and sale of eggs. We have 40 plus retail locations and two large packer/wholesale locations in Lake County for routine inspection. The packers require monthly inspection and several of the larger retail stores, quarterly inspection. We are under State and Federal Contracts to enforce eggs, egg products and wire basket control and receive subvention monies for our time and mileage.

WEIGHTS AND MEASURES DEVICE INSPECTION DIVISION

Each weighing and measuring device that is used commercially in the county is tested for accuracy at least once a year and more often if the device is in constant use. Devices that are found to be correct are sealed with an official seal placed in a conspicuous place. If a device is not in compliance, it requires either a repair or may be confiscated or destroyed pursuant to the law. Counter scales, computing scales, dormant scales, vehicle scales, retail gasoline pumps, wholesale meters on delivery trucks, and propane meters at dispensing stations are all considered devices that we must test annually. Electric meters and propane meters at residences or mobile home parks require testing once every 10 years unless a complaint regarding accuracy is received. Lake County has several thousand electric and vapor meters to test for accuracy and to maintain history and test records. These two categories require close to one man-year of workload.

QUANTITY CONTROL DIVISION

Pre-packed commodities are weighed for accuracy through statistical sampling. All types of packaged merchandise are sampled including dairy products, bakery goods, meat, beverages, pharmacy products, paper products, textile products, hardware and building supplies and many others. Contents must conform to the labeling on the package as to name, address and zip code of the packer, net contents, name of product, and proper sizing or grade must be correct if used. Packages that do not meet these specifications are taken off sale and returned to the packer or in some cases, re-marked to comply.

WEIGHMASTER ENFORCEMENT DIVISION

All persons engaged in the business of weighing for hire must be licensed and bonded. Properly approved weighmaster certificate forms must be used to certify all weights between the parties. We make regular inspections of firms in the weighmaster business in Lake County to determine compliance with the weighmaster laws.

PETROLEUM DIVISION

Advertising signs in service stations are inspected for compliance of markings and advertising as to standards set forth by state regulations. We sample many lots of gasoline, motor oil, anti-freeze, brake fluid and other petroleum products and send them to the State Measurement Standards Lab for testing as to quality and standards.

SPECIAL SERVICES

APIARY INSPECTION

The Agricultural Code requires that all apiary owners register their bee colonies with the Agricultural Commissioner in the county where the bees are located. The Agricultural Commissioner's staff makes routine inspections of apiaries for presence of contagious bee diseases (AFB, EFB, Sac Brood, Nosema, etc.) and investigates bee poisonings whenever they are reported. Apiary inspection and enforcement is a responsibility of the Agricultural Commissioner.

CROP STATISTICS

The Agricultural Commissioner is required by state law to compile an annual report on the value, production and acreage of agricultural products in his county. He has to maintain complete orchard or vineyard acreage planting records and submit weekly crop and livestock reports to the State Department of Food and Agriculture.

OTHER SERVICES

ROADSIDE WEED CONTROL

Roadside weed control was assigned to the Agricultural Department by the Lake County Board of Supervisors to spray a pre-emergent herbicide material, as a strip, on each side of selected county roads throughout the County. This involves approximately 400 acre miles each year and approximately 50 man days (2 men). This work was handed over to this department primarily because of our knowledge of herbicide products, usages, safety and pesticide regulations. We also coordinate the various needs of the Public Works Department (Roads), Special Districts, Parks and Grounds, Flood Control, Sewer Treatment Districts, City of Lakeport and Water Works Department for their budgeting and purchase of the materials by bid. We work closely with the Purchasing Department on this matter (preparing bids, review of quotes and receiving of all materials).

COUNTY FAIR

Staff members assist the Fair District personnel in setting up the Horticultural display areas and labeling, placing of horticultural exhibits and assist in the clerking during the judging phase.

THIRD CLASS MAIL

CHARLES L. GEOBLE
Agricultural Commissioner
Director of Measurement Standards

DON TOMPKINS
Deputy Agricultural Commissioner
Asst. Director of Measurement Standards

April 1977

Richard E. Rominger, Director
California Department of Food
and Agriculture

and

Honorable Board of Supervisors
Lake County

Gentlemen:

In compliance with the provisions of Section 2279 of the California Food and Agricultural Code, I am pleased to submit the Lake County Agricultural Crop Report for the calendar year 1976.

Lake County's gross value for 1976 agricultural crops totaled \$17,630,420, a decrease of approximately \$2 million under the 1975 figure. Our pear industry suffered heavily by the reduced prices for the pears, weather and the cannery strikes during 1976, a \$2½ million drop.

A heavy sell-off of cattle due to the drought conditions is reflected in the higher number of heads sold and the dollar figure reported.

I want to stress again that the figures reported here are Gross Values for Lake County and in no way reflect the true net figures received by the growers or producers.

The Department sincerely appreciates the cooperation of all growers, packing houses and producers in supplying the information necessary for this report. My thanks to all who assisted and to Don Tompkins, Deputy Agricultural Commissioner, who was responsible for compiling the report.

Respectfully submitted,

Charles L. Geoble
Charles L. Geoble
Agricultural Commissioner

and

The Honorable Board of Supervisors
Lake County

Gentlemen:

In compliance with the provisions of Section 2279 of the California Food and Agricultural Code, I am pleased to submit the Lake County Agricultural Crop Report for the calendar year 1977.

Lake County's gross value for 1977 agricultural crops totaled \$17,615,625, a slight decrease in value from the 1976 figure.

Pears continue to be the leading agricultural crop in Lake County with a gross value of \$9,748,875. The pears increased \$1,202,055 in value mainly due to fresh market prices, as the total harvested tonnage was down substantially from the previous year by 9,937 tons. Also, a higher than normal tonnage of pears went to dry yard, pear juice, and juice for fermentation, due to the undersizing caused by the drought conditions throughout 1977.

The gross value for livestock and poultry decreased \$653,285 because there were less livestock to sell than in 1976 (livestock producers have had to sell off much of their breeding stock due to the drought).

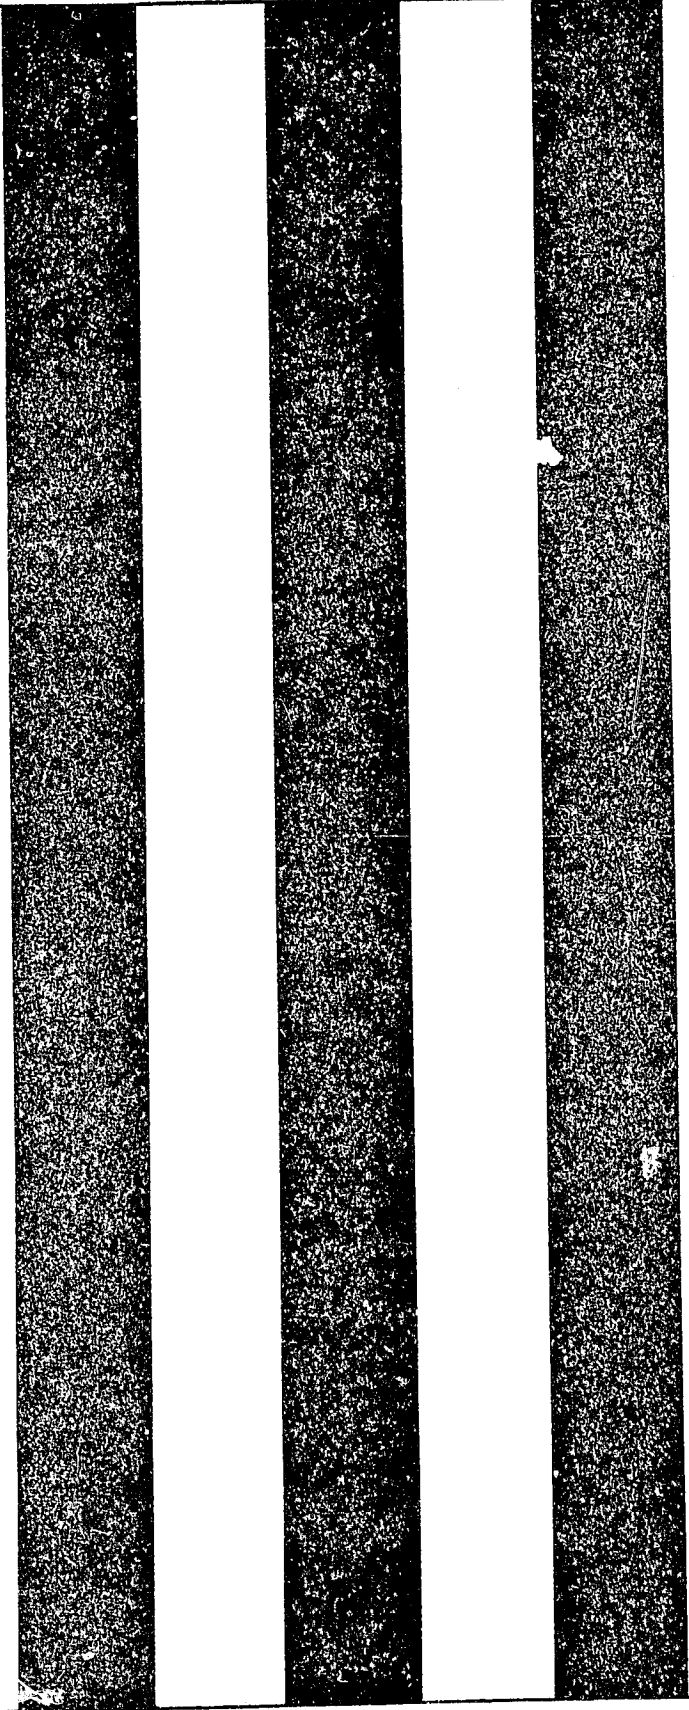

I must emphasize that this report represents gross values of agricultural products and does not reflect any net return to the producer. I also emphasize that the drought had a tremendous effect on dryland growers and forage crops during 1977.

The Department sincerely appreciates the cooperation of all growers, packing houses, vintners and producers in supplying the information necessary for this report. My thanks to all who assisted and to Don Tompkins, Deputy Agricultural Commissioner who was responsible for compiling the report.

Respectfully submitted,

Charles L. Geoble

JOHN E. FALKENSTROM
Deputy Agricultural Commissioner
Asst. Director of Weights & Measures

Richard E. Rominger, Director
California Department of Food
and Agriculture
and
The Honorable Board of Supervisors
Lake County

Ladies and Gentlemen:

In compliance with the provisions of Section 2279 of the California Food and Agricultural Code, I am pleased to submit the Lake County Agricultural Crop Report for the calendar year 1979. Lake County's gross value for 1979 agricultural crops totaled \$33,449,765, an increase of \$3,145,500 over the previous year and a new high for Lake County.

Pears continue to be the leading agricultural crop in Lake County with a gross value of \$16,255,055. This value is up \$1,714,630 over the previous year, mainly due to 15,286 more tons of pears harvested as pear prices were down somewhat from the previous year. Walnut income was down \$2,013,435 from the previous season even though tonnages were nearly the same. Prices paid to the growers were substantially lower. Grape acreage and tonnage continues to grow but the 1979 price was lower than 1978.

Field crops were up considerably due to increased acreages, production and value in wheat and alfalfa along with other hay produced in greater amounts and value. This increase amounted to \$663,750 over the previous year.

Livestock values are up \$2,188,100 due to larger cattle numbers being sold, a recovery from the drought in 1977 and higher prices paid the livestock producer. Sheep values have increased due to more growers and an increased number of small herds in the county providing sales as well as a higher price on sheep. Aquaculture continues to increase steadily as more growers enter into this type production.

I must emphasize that this report represents gross values of agri-products and does not reflect costs of producing these crops nor net return to the grower.

The Department sincerely appreciates the cooperation of the many growers, packing houses, vintners, stockmen and various other producers in supplying the information necessary for this report.

Respectfully submitted,
Don Tompkins
Don Tompkins
Agricultural Commissioner

The Honorable Board of Supervisors
Lake County

Gentlemen:

In compliance with the provisions of Section 2279 of the California Food and Agricultural Code, I am pleased to submit the Lake County Agricultural Crop Report for the calendar year 1980. Lake County's gross value for 1980 agricultural crops totaled \$36,878,305, a 10.3% increase of \$3,428,540 over the previous year and a new high for Lake County.

Pears continue to be the leading agricultural crop in Lake County with a gross value of \$18,281,235. This value is up \$2,026,180 over the previous year, primarily due to a new record tonnage yield of 74,368 tons of pears. The pear prices were about the same as last year's prices. Walnut prices were also about the same and total yield down somewhat from last year, thus totaling \$4,295,105. Grape yields and tonnage continue to increase as more acreages come into bearing and vineyards mature. Tonnage unit prices increased somewhat over last year because more of the white grape variety tonnages are reflected in this year's total crop.

Field crops were up due to increased acreages, production, and new crops (wild rice). This increase amounted to \$960,460 over the previous year.

Livestock values were about the same as last year. Unit prices were down slightly on cattle and more so on hogs and sheep. Sheep numbers are increasing slightly as more small family farm units occur and provide a livestock enterprise along with an off-farm job. Aquaculture continues to grow steadily as more expansion occurs in these farm production operations.

I must emphasize that this Crop Report represents gross values of agricultural products and does not reflect costs of producing these crops nor a net return to the grower.

The Department sincerely appreciates the cooperation of the many growers, packing houses, vintners, livestock producers and various other producers in supplying the information necessary for this report.

Respectfully submitted,

Don Tompkins
Agricultural Commissioner
