California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

San Bernardino County

1928-1945

(1932-33 not available)

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

REPORT ON CROP PRODUCTION, ACREAGE AND VALUATION

1 9 2 9

* * * * *

On all packed fruits, such as Citrus and Apples, the valuation is figured on the f. o. b. price.

The valuation on Hay is based on what the farmer received after baling.

The valuation on all other commodities shown in this report is based on what the farmer received.

The figures in the Citrus report include fruit packed and shipped from the various districts and do not show the exact amount of fruit produced in these districts.

AGRICULTURAL CROP REPORT

FOOD FOR FREEDOM

1941

UNIVERSITY OF CALIFORNIA
LIBRARY
COLLEGE OF AGRICULTURE
DAVIS

SAN BERNARDINO COUNTY

CROP REPORT FOR 1941

San Bernardino County
Department of Agriculture

January 29, 1942

The Agricultural Code states in Section 65.5 that "The Commissioner shall provide reports of the condition, acreage, production and value of the agricultural products in his County. The Commissioner may publish such reports and shall transmit a copy thereof to the Director."

The prices given in this report are on an F.O.B. basis, including the cost of picking, packing, hauling, and other charges. Thus these prices are not in any way indicative of the income to the grower.

Because of the war situation, the food products grown on our farms are essential to the health and well-being of our Army, Navy and civilian population. For this reason, we are including many products which have potential value in our war effort. Also, we are including the livestock report in order to show the balanced agricultural resources of the County.

We wish to express our appreciation to the many agencies and our own Agricultural Inspectors who have made this report possible.

The California Cooperative Crop Reporting Service has spent nearly a year and a half in revising the tree and vine acreage of this County. The N.Y.A. and W.P.A. have had charge of the listing of this acreage information. We appreciate the service rendered by these agencies and all others who have assisted us in this work. Especially do we wish to thank Miss Helen MacGregor of Farm Advisor Henry Wilder's staff for the cover design used on this report.

GEO. E. WOODHAMS

Agricultural Commissioner

ANNUAL CROP REPORT

- 1 9 4 2 -

SAN BERNARDINO COUNTY

DEPARTMENT OF AGRICULTURE

This year the Annual Crop Report is organized early because of the Joint Committee hearings of the United States Senate and the State Senate Interim Committee. Both of these committees are studying the problems of agriculture, with special reference to the shortage of agricultural labor. It was felt that we should present the 1942 crop production figures at these hearings on the problems confronting our agriculture.

The report, this year, will not include the gross f.o.b. money value of the crops produced in San Bernardino County. There is some increase in the gross value of some of these crops, but the net value to the farmer is seriously reduced. The cost of production, harvesting and marketing of the crops has increased so seriously that the farmer income has been drastically cut. The gross agricultural income is of direct benefit to the community, but the farmer does not enjoy the profit which is rightfully his. In many instances gross income figures have been used to misinterpret the actual farmer income.

The start of the 1942 agricultural production year was one of patriotic hope for the farmers. They signed up to raise "Food for Victory" and planted increased acreages. The farmers were told that "food would win the war and write the peace." As the season progressed, the farmers were bewildered to find that new implements of production were restricted and finally rationed. They lost their trained labor to the armed forces, through the draft and to higher paying industrial jobs. They had to depend upon inefficient help. Finally they called upon women and children to save their crops. The tomato crop was a failure and many growers lost, not only their expected return, but also their initial investment.

Agriculture is ready and willing to do its part in helping to win the present war if equipment, men and essential materials are made available so the job can be done.

Respectfully submitted

ANNUAL CROP REPORT FOR 1943

We offer this annual report as a tribute to the farmers of San Bernardino County. We feel the record of their increased production, in the face of such detriments as ceiling prices, rationed machinery and materials, and a heavy loss of trained farm help, is one of which they may be justly proud.

Rising to the occasion, many farmers changed over to vegetable crops and we enjoyed the greatest variety, as well as the largest acreage of vegetable production we have ever had.

The citrus growers had a good year. While the navel crop was short, the price was very satisfactory. With Valencias selling at ceiling price, there was little incentive to hold the crop for better markets, and the harvest was completed much earlier than usual. The lemon crop was one of our largest and some difficulty was experienced in harvesting due to the shortage of labor. However, the market remained favorable and the gross returns topped that of many years.

The grape growers, after encountering much trouble in getting men for pruning, went into a high market with their greatest production in years. The exceptionally good market enabled them to meet the competition of other agencies for labor, and little adversity was met in the harvest.

While the gross agricultural returns for the County, shown in this report, represent quite a gain over previous years, it should be borne in mind that production costs have also very greatly increased. We have no accurate measure to use in arriving at the increased cost of labor, fertilizers, pest control materials, and the many other things the farmer must purchase. Nor can we overlook the time lost from production through standing in line at rationing boards for machinery and materials needed for farming.

We take this opportunity to thank the many individuals, organizations, and agencies who have supplied the information which has made this report possible.

Chas. J. Hayward
Acting Agricultural Commissioner

ANNUAL CROP REPORT, 1944

To: The Honorable Board of Supervisors
San Bernardino County

and

The Director of Agriculture
State Department of Agriculture

This Annual Crop Report is compiled and made available under Section 65.5 of the State Agricultural Code.

We find that there has been a substantial increase in the production of some farm products; and we must point out that such increases are extraordinary in view of the many obstacles faced by agriculture. Farm machinery has not been replaced sufficiently, since the War started. Essential, trained farm workers have been inducted into the Military Services, and the average farmer age is so high that it is remarkable that heavier farm tasks can be carried on.

We must point out again that our figures are compilations and estimates of gross farm income F. O. B. the point of transportation. This value includes all costs of production, harvesting and preparation of the product for market. We include all of these figures because they represent income to the county.

On the other hand, income (net) to the farmer is a different story. Increased cost of production, low ceiling prices on products, and low efficiency of present day farm workers cuts the farmers actual income drastically on most products. Some crops have brought a good net income to the farmer.

We wish to thank all who have cooperated to make this report possible. The inspectors on our staff have contacted many producers, processors, packing houses, etc. in order to compile the statistics. We also wish to thank those who have made our livestock compilation possible. These figures have been checked by Arthur Campbell and Joseph Hertel (Extension Service), Dr. W. C. Bateman, County Veterinarian and Livestock Inspector and Earl Hubbard, County Milk Inspector.

Respectfully submitted,
Geo. E. Woodhams
Geo. E. Woodhams
Agricultural Commissioner

ANNUAL CROP REPORT, 1945

To: The Honorable Board of Supervisors
San Bernardino County

and

The Director of Agriculture
State Department of Agriculture

The 1945 Crop Report has been compiled and issued under Section 65.5 of the State Agricultural Code.

The total crop income shows a substantial increase again this year. Some of this increase is due to our activity in the location of some places we had not found in the production of poultry and other live stock. There was some increase in citrus income, but we also found that packing houses had formerly given us a somewhat lower figure than we had needed for our report; therefore this situation was corrected for the 1944 and 1945 crop years.

According to our information, grapes were down considerably from 1944. There was a substantial increase in the income from berries. Some vegetable crops were not planted in the usual amounts because of the low ceiling prices and the high cost of production. Subtropical trees show an outstanding reduction in crop and income, olives having suffered a very severe reduction in income and production. The almond crop was a total failure. The walnut crop showed less production but a higher return than the previous season.

We wish to point out that net income to the farmer has again been held down by high production costs and fixed ceiling prices. Some crops have brought a good net income to the producer.

Our Department wishes to thank those who have assisted in making this report possible. In addition to these we wish to acknowledge help received from the Extension Service, Dr. Bateman (County Livestock Inspector), Mrs. Marjorie Hambly (Agricultural Conservation Association), and Earl Hubbard (County Milk Inspector).

Respectfully submitted,
Geo. E. Woodhams
