California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

San Mateo County

1973-1981

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,
<http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

GOVT. DOCS. - LIBRARY

1973

Mr. C. B. Christensen, Director
State of California
Department of Food & Agriculture

and

Honorable Board of Supervisors
San Mateo County

Gentlemen:

In accordance with Section 2279 of the California Agricultural Code, I herewith submit a report of the condition, acreage, production and value of the agricultural products in San Mateo County for the year 1973.

The total gross value of \$42,154,400.00 is less than last year by \$633,170.00. This loss can be attributed to decreased acreage, foreign competition and losses due to freezing temperatures. Artichoke plants lost production for a three month period. Marguerite daisies and other outdoor flowering plants were temporarily wiped out. Carnations, as well as other green house plants, failed to produce high quality blooms during winter months because of the inability of growers to maintain desirable temperatures.

I wish to emphasize the fact that this report is based upon gross production and value only, and in no manner reflects the net income to the grower. It is possible, and indeed quite probable, that in some few instances losses were sustained.

To the many growers, agencies and individuals who contributed so generously to this report I extend my eternal gratitude, and to my staff for their long hours and extra effort, I give my sincere appreciation.

Respectfully,

Claude W. Bridges

Claude W. Bridges

FUNCTIONS AND ACTIVITIES

SAN MATEO COUNTY DEPARTMENT OF AGRICULTURE

YEAR - - - - 1973

The California Food and Agricultural Code states; "There is in each county government the county department of agriculture. The county department of agriculture is under the control of the county agricultural commissioner."

The county agricultural commissioner is a regulatory officer and charged with the enforcement of all provisions of the California Food and Agricultural Code and the California Administrative Code which relate to his office. He, his deputies and qualified inspectors, are, by law, state plant quarantine officers and work under direct supervision of the State Director of Food and Agriculture. He must also enforce any ordinance, resolution or other lawful order of the County Board of Supervisors when directed.

The primary responsibility of the Commissioner and his department is to promote and protect the agricultural industry; to protect the grower, consumer, farm worker, the general public and the environment by judicious enforcement of agricultural laws.

A brief summary of departmental functions and activities are listed as follows:

ENVIRONMENTAL PROTECTION

Pest Detection

Surveys are conducted annually throughout the county to prevent the introduction and spread of detrimental agricultural pests. Insects and diseases such as the devastating Gypsy Moth, the Japanese Beetle, Oak Wilt Disease, Elm Tree Diseases and many others could cause untold damage to our food and fiber crops and to our ornamental and forestry plants if not detected and eradicated before they become well established.

Trapping programs are used extensively as another means of insect detection. Traps baited with distinctive lures and scents are placed strategically in all areas of the county where they are serviced and maintained during the optimum season.

Pest Eradication

Qualified staff members assist and advise pest control operators, growers, nurserymen and others in regards to problems relating to the eradication of any agricultural pest. At present the department is directing eradivative measures toward five species of noxious weeds; namely, Skeleton Weed, Artichoke Thistle, Dalmation Toadflax, Klamath Weed and Perennial Peppergrass. Under a service agreement with the Southern Pacific Railroad Company, eradivative measures are directed toward several such primary noxious weeds. The county is reimbursed for control work done under contractual agreements with other agencies.

Should the county be invaded by other serious or quarantined pests, the department will instigate eradivative measures immediately.

Pest Management

This activity is dedicated to the control of established pests rather than total eradication. Properly applied, the program should hold pests down to population levels which agriculture can sustain without suffering great financial losses. Biological control is considered an integral part of Pest Management and can often decrease the target species to a point where eradivative measures are feasible. As in other departmental activities, advice and assistance is extended to agriculturalists and to the general public in their efforts to control certain pests.

A. Rodent and Vertebrate Pest Control

A countywide program of treatment to control ground squirrels is conducted which is entirely financed with county funds. Ground squirrels are known carriers of human diseases such as Bubonic Plague and Tularemia, as well as being serious pests of agricultural crops.

The County Public Health Department, on occasion, requests our cooperation in their urban area rodent control program.

B. Weed Control

Certain weeds, although not classified by the State Department of Food and Agriculture as being a serious agricultural threat statewide, are quite noxious and a definite threat to areas free from such pests. A continuing control program is directed toward keeping our uninfested coastal farm areas from becoming contaminated by several such weeds, resulting in considerable savings to farmers in that area.

Pest Exclusion

Plant material is inspected at points of entry such as Post Offices, Express Offices, Air Terminals, Railroad and Truck Depots, Nurseries and other places to prevent the introduction into or spread within

the state and county of serious agricultural pests.

Shipments of produce and plant material to foreign countries must comply with State and Federal regulations. Each shipment is inspected and certified by one of our staff prior to departure.

Insects, diseased plant material, roots and foliage specimens are prepared and processed in our laboratory for determination by the State Laboratory Services Division in Sacramento.

Pesticide Use Enforcement

Pest Control Operators are licensed by the State and registered annually by the Agricultural Commissioner in whose county they conduct business. This department enforces County and State laws and regulations governing agricultural pest control. Furthermore, if they, or the growers, plan to purchase and/or use certain pesticides which have been designated by the State as restricted materials or herbicides, they are required to obtain a permit from the Agricultural Commissioner permitting such use.

Pesticide Dealers and Advisors are now examined and licensed by the State Department of Food and Agriculture and register, each year, in counties of intended operation before sales can be made.

Impending Federal regulations have prompted California to promulgate farm worker safety regulations designed to protect the agricultural employee against farm hazards, especially pesticide hazards. This department must devote at least one additional man year to the enforcement of such regulations if we are to fulfill our obligations to the program.

CONSUMER PROTECTION REGULATION

Nursery and Seed Regulation

A. Nursery Regulation

San Mateo County has 234 licensed nurseries doing a total annual business in excess of \$21,000,000. Plants are inspected at each location periodically to determine the presence of insect pests, diseases and over-all pest cleanliness as provided for by State Nursery Inspection Regulations.

As in Pest Exclusion, specimen samples are processed for final determination or identification by the State Laboratory Services Division in Sacramento.

B. Seed Inspection

The California Seed Law provides that agricultural and vegetable seed be properly labeled and that it meet the specifications stated on the label.

In cooperation with this office, the State Department of Food and Agriculture maintained a seed potato disease test plot on the Coastside.

Fruit and Vegetable Quality Control

In order to protect both producers and consumers, a major activity of the department is the inspection of fresh fruits and vegetables, nuts and honey. All grocery and retail markets are visited periodically and their produce is inspected to assure the consuming public a good quality product.

The Golden Gate Produce Terminal in South San Francisco is one of the largest wholesale fruit and vegetable outlets in Northern California. Produce at the terminal is received and sold throughout California, the United States and many foreign countries. Gross receipts for 1973 were reportedly in excess of \$90,200,000.00 from the sale of 8,570,472 packages.

Certain agricultural commodities are controlled through Marketing Orders. These orders, which industry itself requests, provide superior quality for the consumer and a greater return to the producer. This department cooperates with several Advisory Boards in the enforcement of pertinent Marketing Orders.

Egg Quality Control

Eggs are candled and inspected at all retail and wholesale outlets in the county. The purpose of these inspections is to determine if the eggs meet all the requirements of the grades as marked, and that there are no inedible eggs in the lot. Inspections are made under a cooperative agreement with the United States Department of Agriculture, the California Department of Food and Agriculture and San Mateo County.

Both State and Federal agencies contribute to the enforcement costs of the program.

SPECIAL SERVICES

Apiary Regulation

All beekeepers are required, by law, to register their apiaries with the Agricultural Commissioner each year. This is to help prevent the spread of diseases such as American Foul Brood which is not only highly contagious but incurable. Annual inspections of each apiary are performed by staff members and when this fatal disease is found the bees are destroyed and the hive and all its contents either sent to a wax salvage plant or burned.

Crop Statistics

The Agricultural Commissioner is compelled, by law, to compile and publish an annual report showing the acreage and value of all crops grown in the county. This information is obtained by members of our

staff under a pledge of confidentiality. The report is requested by other government agencies, educational institutions, private individuals and by allied agricultural industries. Statistical data regarding specific crops is furnished upon request.

OTHER ACTIVITIES

Fairs

An important function of this department is participation in the California Exposition wherein the exhibit is designed, constructed and manned by members of our staff. Our replica of the historic Pigeon Point Lighthouse as a background for the many ornamentals and flowering plants won for us, once again, the Exhibit Trophy and 87 Excellence Blue Ribbons. Cash awards amounting to \$1,400.00 was received and deposited in the County Treasury.

As an Ex-Officio member of the Board of Directors for the San Mateo County Fair and Floral Fiesta, the Agricultural Commissioner and his staff assist with the organization and judging of the Agricultural Division.

Civil Defense

An inventory of the wholesale foods in the county is maintained by the department. As the county representative to the Food Administration Division of the California Disaster Office this inventory is available in the event of a serious emergency.

Predatory Animal Control

Predatory Animal Control is primarily for the protection of livestock. Many of the small predators, however, are potential rabies carriers. This control is accomplished by one full time hunter whose services are maintained through a cooperative effort of the United States Department of Interior, the California Department of Public Health and San Mateo County.

Laboratory

In order to more fully assist nurserymen and home gardeners, a laboratory is maintained by the department for the purpose of testing well water, on request, to determine the saline content which could cause injury to plants. The laboratory also serves to extract nematodes from roots of certain plants which are submitted to the State Laboratory in Sacramento for determination.

COOPERATIVE ACTIVITIES

1. Service calls, from the public regarding plant pest control and other home garden and agricultural problems, numbered 12,109 this year.

2. At the request of the State Department, The University of California, scientific groups and various agricultural organizations, staff members attended 169 meetings involving professional problems.
3. The department is responsible for the contracting and supervision of weed abatement for fire prevention on unimproved properties within a Weed Abatement District.
4. Educational talks on various phases of agriculture are given to farm, garden and service organizations, as well as to school children and other youth groups.
5. Annual and monthly reports are prepared and sent to the State Director of Food and Agriculture. A narrative and statistical report is sent monthly to the San Mateo County Board of Supervisors.
6. A weekly report is forwarded to the California State Crop and Livestock Reporting Service as to the harvesting and handling of crops and livestock, and the effects of weather upon them.
7. Growing grounds of importers of foreign plant material are given periodic post-entry quarantine inspections.
8. Along county roads, elm trees are surveyed and sprayed to control the Elm Leaf Beetle.
9. Technical publications issued by the University of California, United States Department of Agriculture, State Department of Food and Agriculture and various other agencies are maintained in a library.
10. Under jurisdiction of the Bay Area Pollution Control Board and in cooperation with local fire marshalls, permits are issued to burn agricultural and horticultural plant material harboring detrimental pests.
11. As a member of the County Consumer Protection Committee the Agricultural Commissioner assists in the planning and development of procedural policy and investigates all complaints falling within his realm of responsibility.

SAN
MATEO
COUNTY

**AGRICULTURAL
CROP
REPORT
1974**

UNIVERSITY OF CALIFORNIA
DAVIS

JUL 9 - 1975

GOV'T. DOCS. - LIBRARY

April 25, 1975

Dr. Luther T. Wallace, Director
California Department of Food and Agriculture
and
The Honorable Board of Supervisors
San Mateo County

Gentlemen:

In accordance with Section 2279 of the California Food and Agricultural Code, I herewith submit a report of the condition, acreage, production and value of the agricultural products of San Mateo County for the year 1974.

The total gross value of \$44,090,100.00 exceeded last years total by almost \$2,000,000.00. This increase was primarily due to rising market prices.

We have revised our reporting procedure somewhat in order to conform more closely with State and Federal standards. As a result it will be slightly more difficult to make comparisons with previous years in some few instances.

All values are gross values and, in no manner, reflect the net income to the grower. Steadily rising production and marketing costs often wipe out profits completely.

To those many agencies and individuals who contributed information for this report and to my staff for gathering and compiling the information, I give my sincere appreciation.

Respectfully,

Claude W. Bridges

Claude W. Bridges

FUNCTIONS AND ACTIVITIES

SAN MATEO COUNTY DEPARTMENT OF AGRICULTURE

YEAR - - - - - 1974

The California Food and Agricultural Code states; "There is in each county government the county department of agriculture. The county department of agriculture is under the control of the county agricultural commissioner."

The county agricultural commissioner is a regulatory officer and charged with the enforcement of all provisions of the California Food and Agricultural Code and the California Administrative Code which relate to his office. He, his deputies and qualified biologists, are, by law, state plant quarantine officers and work under direct supervision of the State Director of Food and Agriculture. He must also enforce any ordinance, resolution or other lawful order of the County Board of Supervisors when directed.

The primary responsibility of the Commissioner and his department is to promote and protect the agricultural industry; to protect the grower, consumer, farm worker; the general public and the environment by judicious enforcement of agricultural laws.

A brief summary of departmental functions and activities are listed as follows:

ENVIRONMENTAL PROTECTION

Pest Detection

Surveys are conducted annually throughout the county to prevent the introduction and spread of detrimental agricultural pests. Insects and diseases such as the devastating Gypsy Moth, the Japanese Beetle, Oak Wilt Disease, Elm Tree Diseases and many others could cause untold damage to our food and fiber crops and to our ornamental and forestry plants if not detected and eradicated before they become well established.

Trapping programs are used extensively as another means of insect detection. Traps baited with distinctive lures and scents are placed strategically in all areas of the county where they are serviced and maintained during the optimum season.

Pest Eradication

Qualified staff members assist and advise pest control operators, growers, nurserymen and others in regards to problems relating to the eradication of any agricultural pest. At present the department is directing eradivative measures toward five species of noxious weeds; namely, Skeleton Weed, Artichoke Thistle, Dalmation Toadflax, Klamath Weed and Perennial Peppergrass. Under a service agreement with the Southern Pacific Railroad Company, eradivative measures are directed toward several such primary noxious weeds. The county is reimbursed for control work done under contractual agreements with other agencies.

Should the county be invaded by other serious or quarantined pests, the department will instigate eradivative measures immediately.

Pest Management

This activity is dedicated to the control of established pests rather than total eradication. Properly applied, the program should hold pests down to population levels which agriculture can sustain without suffering great financial losses. Biological control is considered an integral part of Pest Management and can often decrease the target species to a point where eradivative measures are feasible. As in other departmental activities, advice and assistance is extended to agriculturalists and to the general public in their efforts to control certain pests.

A. Rodent and Vertebrate Pest Control

A countywide program of treatment to control ground squirrels is conducted which is entirely financed with county funds. Ground squirrels are known carriers of human diseases such as Bubonic Plague and Tularemia, as well as being serious pests of agricultural crops.

The County Public Health Department, on occasion, requests our cooperation in their urban area rodent control program.

D. Weed Control

Certain weeds, although not classified by the State Department of Food and Agriculture as being a serious agricultural threat statewide, are quite noxious and a definite threat to areas free from such pests. A continuing control program is directed toward keeping our uninfested coastal farm areas from becoming contaminated by several such weeds, resulting in considerable savings to farmers in that area.

Pest Exclusion

Plant material is inspected at points of entry such as Post Offices, Express Offices, Air Terminals, Railroad and Truck Depots, Nurseries and other places to prevent the introduction into or spread within

the state and county of serious agricultural pests.

Shipments of produce and plant material to foreign countries must comply with State and Federal regulations. Each shipment is inspected and certified by one of our staff prior to departure.

Insects, diseased plant material, roots and foliage specimens are prepared and processed in our laboratory for determination by the State Laboratory Services Division in Sacramento.

Pesticide Use Enforcement

Pest Control Operators are licensed by the State and registered annually by the Agricultural Commissioner in whose county they conduct business. This department enforces County and State laws and regulations governing agricultural pest control. Furthermore, if they, or the growers, plan to purchase and/or use certain pesticides which have been designated by the State as restricted materials or herbicides, they are required to obtain a permit from the Agricultural Commissioner permitting such use.

Pesticide Dealers and Advisors are now examined and licensed by the State Department of Food and Agriculture and register, each year, in counties of intended operation before sales can be made.

Federal regulations have prompted California to promulgate farm worker safety regulations designed to protect the agricultural employee against farm hazards especially pesticide hazards. This department must devote more time to the enforcement of such regulations if we are to fulfill our obligations to the program.

CONSUMER PROTECTION REGULATION

Nursery and Seed Regulation

A. Nursery Regulation

San Mateo County has 374 nurseries doing a total annual business in excess of \$37,700,000.00. Plants are inspected at each location periodically to determine the presence of insect pests, diseases and over-all pest cleanliness as provided for by State Nursery Inspection Regulations.

As in Pest Exclusion, specimen samples are processed for final determination or identification by the State Laboratory Services Division in Sacramento.

B. Seed Inspection

The California Seed Law provides that agricultural and vegetable seed be properly labeled and that it meet the specifications stated on the label.

The seed stock of both wholesale and retail dealers is inspected at irregular intervals, thus providing our public with protection against fraud, deception and poor quality seed.

In cooperation with this office, the State Department of Food and Agriculture maintains a seed potato disease test plot on the Coastside.

Fruit and Vegetable Quality Control

In order to protect both producers and consumers, a major activity of the department is the inspection of fresh fruits and vegetables, nuts and honey. All grocery and retail markets are visited periodically and their produce is inspected to assure the consuming public a good quality product.

The Golden Gate Produce Terminal in South San Francisco is one of the largest wholesale fruit and vegetable outlets in Northern California. Produce at the terminal is received and sold throughout California, the United States and many foreign countries. Gross receipts for 1974 were reportedly in excess of \$100,240,000.00 from the sale of 8,470,330 packages.

Certain agricultural commodities are controlled through Marketing Orders. These orders, which industry itself requests, provide superior quality for the consumer and a greater return to the producer. This department cooperates with several Advisory Boards in the enforcement of pertinent Marketing Orders.

Egg Quality Control

Eggs are candled and inspected at all retail and wholesale outlets in the county. The purpose of these inspections is to determine if the eggs meet all the requirements of the grades as marked, and that there are no inedible eggs in the lot. Inspections are made under a cooperative agreement with the United States Department of Agriculture, the California Department of Food and Agriculture and San Mateo County.

Both State and Federal agencies contribute to the enforcement costs of the program.

SPECIAL SERVICES

Apiary Regulation

All beekeepers are required, by law, to register their apiaries with the Agricultural Commissioner each year. This is to help prevent the spread of diseases such as American Foul Brood which is not only highly contagious but incurable. Annual inspections of each apiary are performed by staff members and when this fatal disease is found the bees are destroyed and the hive and all its contents either sent to a wax salvage plant or burned.

Crop Statistics

The Agricultural Commissioner is compelled, by law, to compile and publish an annual report showing the acreage and value of all crops grown in the county. This information is obtained by members of our staff under a pledge of confidentiality. The report is requested by other government agencies, educational institutions, private individuals and by allied agricultural industries. Statistical data regarding specific crops is furnished upon request.

OTHER ACTIVITIES

Fairs

An important function of this department is participation in the California Exposition wherein the exhibit is designed, constructed and manned by members of our staff. Our replica of an historic old county mansion as a background for the many ornamentals and flowering plants won for us, once again, the Exhibit Trophy and OS Excellence Blue Ribbons. Cash awards amounting to \$1,400.00 was received and deposited in the County Treasury.

As an Ex-Officio member of the Board of Directors for the San Mateo County Fair and Floral Fiesta, the Agricultural Commissioner and his staff assist with the organization and judging of the Agricultural Division. The staff also enters a non-competitive exhibit in our County Fair and in other trade fairs which depicts departmental functions and activities.

Civil Defense

An inventory of the wholesale foods in the county is maintained by the department. As the county representative to the Food Administration Division of the California Disaster Office this inventory is available in the event of a serious emergency.

Predatory Animal Control

Predatory Animal Control is primarily for the protection of livestock. Many of the small predators, however, are potential rabies carriers. This control is accomplished by one full time hunter whose services are maintained through a cooperative effort of the United States Department of Interior, the California Department of Public Health and San Mateo County.

Laboratory

In order to more fully assist nurserymen and home gardeners, a laboratory is maintained by the department for the purpose of testing well water, on request, to determine the saline content which could cause injury to plants. The laboratory also serves to extract nematodes from roots of certain plants which are submitted to the State Laboratory in Sacramento for determination.

COOPERATIVE ACTIVITIES

1. Service calls, from the public regarding plant pest control and other home garden and agricultural problems, numbered 10,444 this year.
2. In cooperation with, or at the request of, the State Department, the University of California, scientific groups and various agricultural organizations, staff members attended 260 meetings involving professional problems.
3. The department is responsible for the contracting and supervision of weed abatement for fire prevention on unimproved properties within a Weed Abatement District.
4. Educational talks on various phases of agriculture are given to farm, garden and service organizations, as well as to school children and other youth groups.
5. Annual and monthly reports are prepared and sent to the State Director of Food and Agriculture, and special reports are submitted to the Board of Supervisors when requested.
6. A weekly report is forwarded to the California State Crop and Livestock Reporting Service as to the harvesting and handling of crops and livestock, and the effects of weather upon them.
7. Growing grounds of importers of foreign plant material are given periodic post-entry quarantine inspections.
8. Elm trees along county roads are surveyed and sprayed to control the Elm Leaf Beetle.
9. Technical publications issued by the University of California, United States Department of Agriculture, State Department of Food and Agriculture and various other agencies are maintained in a library.
10. Permits are issued to burn agricultural and horticultural plant material harboring detrimental pests. This is done under the jurisdiction of the Bay Area Air Pollution Control Board and in cooperation with local fire marshalls.
11. As a member of the County Consumer Protection Committee the Agricultural Commissioner assists in the planning and development of procedural policy and investigates all complaints falling within his realm of responsibility.

SAN MATEO COUNTY

AGRICULTURAL CROP REPORT

Return to
Govt. Documents
Dept. by:

JUN 16 1977

1975

April 12, 1976

Dr. Luther T. Wallace, Director
California Department of Food and Agriculture

and

The Honorable Board of Supervisors
San Mateo County

Gentlemen:

In accordance with Section 2279 of the California Food and Agricultural Code, I herewith submit a report of the condition, acreage, production and value of the agricultural products of San Mateo County for the year 1975.

The total gross value of \$57,026,200.00 exceeded the previous year by \$12,992,700.00. This is the greatest single year increase of record and can be attributed almost entirely to increased production and price of potted flowering and green foliage plants.

Values revealed in this report are estimated gross values only, and are based upon the best available authoritative sources. It would not be possible to arrive at a net return because of the variability of costs in producing, harvesting, packaging and marketing our products.

To all those who contributed information for this report and to my staff for gathering and compiling the information, I give my sincere appreciation.

Respectfully,

Claude W. Bridges

Claude W. Bridges
Agricultural Commissioner
San Mateo County

FUNCTIONS AND ACTIVITIES

SAN MATEO COUNTY DEPARTMENT OF AGRICULTURE

YEAR - - - - 1975

As provided for in the California Food and Agricultural Code San Mateo County has a Department of Agriculture whose chief officer is the Agricultural Commissioner.

His primary responsibility is to promote and protect the agricultural industry as it affects both producer and consumer. He and his appointed assistants enforce provisions of the agricultural and administrative codes, certain federal regulations and county ordinances in order to protect the environment and the health and welfare of all citizens.

The following briefly summarizes departmental activities and presents a statistical analysis of the harvested acreage, production and gross value of San Mateo County crops for the year 1975.

ENVIRONMENTAL PROTECTION

Pest Detection

To prevent the introduction and spread of serious agricultural pests such as the devastatingly destructive Japanese Beetle, Gypsy Moth, Oak Wilt Disease and Elm Tree Diseases annual countywide surveys are carried out by staff biologists. If these pests are not detected and eradicated before they become well established our food, fiber and ornamental crops can suffer millions of dollars in damage. A most comprehensive survey will be conducted in early spring to determine if Dutch Elm Disease exists in San Mateo County.

An additional detection tool is our insect trapping program. Specially developed traps baited with distinctive lures and scents are strategically located throughout the county. Staff Biologists periodically examine the catch and replenish the lure.

Pest Eradication

Currently the department is directing the eradication of serious noxious weeds such as Artichoke Thistle, Skeleton Weed, Dalmation Toadflax, Klamath Weed and Perennial Peppergrass. Eradicative measures are also in progress on several primary noxious weeds under a service agreement with the Southern Pacific Railroad Company. The County is reimbursed for control work done under contractual agreements with other agencies.

Staff members specially certified by the State Department of Food and Agriculture assist and advise growers, pest control operators, nurserymen and others with various problems relating to agricultural pest eradication.

Pest Management

Since it is not economically feasible to eradicate certain serious agricultural pests because of their wide distribution this activity is an attempt to reduce their population to levels which agriculture can sustain without suffering great financial loss.

An integral part of this program is the use of Biological Control. Often times a target species can be biologically reduced to a level where eradication measures are feasible. Advice and assistance is given to agriculturalists and to the general public in their efforts to control pests.

A. Rodent and Vertebrate Pest Control

Ground squirrels are known carriers of certain serious human diseases such as Bubonic Plague and Tularemia and are also serious agricultural pests. A countywide control program, financed with county funds, is carried on by the department.

Assistance is also provided the County Public Health Department in their urban area rodent control program.

B. Weed Control

Control programs are carried on against certain noxious weeds that are not considered to be serious agricultural pests statewide but are quite noxious and a definite threat to areas free from such pests. Uninfested coastal farm areas are protected from invasion by such weeds because of our program and this results in considerable savings to farmers of that area.

Pest Exclusion

To prevent the introduction into or spread within the state and county of serious agricultural pests, plant material is inspected at points of entry such as air, rail and truck terminals, bus depots, nurseries, pest offices, express offices and other places.

Each shipment of produce or plant material being exported to a foreign country is inspected and certified by a staff biologist prior to departure in accordance with state and federal regulations.

The department's laboratory prepares and processes insects, diseased plant material, roots and foliage specimens for determination by the State Laboratory Services Division in Sacramento.

Pesticide Use Enforcement

The department enforces county and state laws and regulations governing agricultural pest control. Each pest control operator must obtain a state license and register annually with the Agricultural Commissioner in whose county he conducts business. Pest control operators and growers who purchase or use pesticides designated by state law as restricted materials or herbicides must first secure a permit from the agricultural commissioners office.

Pesticide Advisors and Dealers must be examined and annually licensed by the State Department of Food and Agriculture. Additionally they must register each year with the Agricultural Commissioner of each county in which they intend to operate and make sales.

This department also devotes a substantial amount of its resources toward the enforcement of farm worker safety and environmental protection regulations. These laws are designed to protect the agricultural worker and our environment from pesticides and other farm hazards.

CONSUMER PROTECTION REGULATION

Nursery and Seed Regulation

A. Nursery Regulation

San Mateo County has 373 nurseries with a gross annual business in excess of 49 million dollars. State regulations provide for periodic inspections at each location to insure over-all pest cleanliness and plant health. As in Pest Exclusion, samples are processed for identification or final determination by the State Laboratory Services Division.

B. Seed Inspection

All agricultural and vegetable seed offered for sale in California must comply with the California Seed Law as to labeling and specifications stated on the label.

Both wholesale and retail seed stocks are regularly inspected to protect the consumer against poor quality, fraud and deception.

The State Department of Food and Agriculture in cooperation with the Agricultural Commissioner maintains a seed potato disease test plot near Half Moon Bay.

Fruit and Vegetable Quality Control

To protect the producer and assure the consumer a good quality product, a major activity of this department is the regular inspection of all fresh fruits and vegetables, nuts and honey offered for sale at grocery and retail markets.

One of the largest wholesale outlets for fruits and vegetables in Northern California is the Golden Gate Produce Terminal in South San Francisco. They receive and sell produce throughout California, the United States and many foreign countries. Gross receipts for 1975 were reportedly in excess of \$110,404,800.00 from the sale of 9,340,643 packages.

In order to provide the consumer with a superior product and the grower with a good return, certain agricultural commodities are controlled by industry requested marketing orders. The department cooperates with several advisory boards in their enforcement of these marketing orders.

Egg Quality Control

All retail and wholesale egg outlets in the county are regularly inspected to determine if the eggs meet the requirements of their marked grades, and, to insure that there are no inedible eggs in any lot. Inspections are made under a cooperative agreement with the U.S.D.A., California Department of Food and Agriculture and San Mateo County.

SPECIAL SERVICES

Apiary Regulation

Each year, by law, beekeepers must register their apiaries with the Agricultural Commissioner. Apiaries are annually inspected by staff biologists to prevent the spread of American Foulbrood disease which is highly contagious and incurable. If this fatal disease is found the bees are destroyed and the hive and its contents are either sent to a wax salvage plant for processing or burned.

Crop Statistics

State law provides that the Agricultural Commissioner compile and publish an annual report showing the acreage, production and value of all crops grown in the county. The information is gathered by staff members under a pledge of confidentiality. Published information is used by other government agencies, educational institutions, private individuals and by allied agricultural industries. Statistical data regarding specific crops is furnished upon request.

OTHER ACTIVITIES

Fairs

The Agricultural Commissioner is an Ex-officio member of the Board of Directors for the San Mateo County Fair and Floral Fiesta. He and his staff assist with the organization and judging of the agricultural division. When directed, the department enters non-competitive exhibits in our County Fair and in other trade fairs. These exhibits are usually designed to explain departmental services and functions.

Civil Defense

As the county representative to the Food Administration Division of the California Disaster Office the Commissioner and his staff maintain an inventory of all wholesale food in the county. This inventory is made available in event of a serious emergency.

Predatory Animal Control

This function is primarily directed toward livestock protection. Many of the smaller predators, however, are potential rabies carriers. Control is carried on by a full time predatory animal trapper whose services are maintained under a cooperative agreement between the United States Department of Interior and San Mateo County.

Laboratory

To more fully assist nurserymen and home gardeners the department maintains a laboratory capable of testing well water to determine its saline content. The facilities are also used to extract nematodes from the roots of certain plants so that they can be submitted to the State Laboratory for determination.

COOPERATIVE ACTIVITIES

1. The public called upon the department 13,609 times in 1975 for help with problems involving plant pest control, home garden and agricultural problems.
2. Staff members attended 249 meetings involving professional problems in cooperation with or at the request of the State Department, the University of California, scientific groups and various agricultural organizations.
3. Staff members give educational talks on the various phases of agriculture to farm, garden and service organizations as well as to school children and other youth groups.
4. Annual and monthly reports are prepared for the Director of Food and Agriculture. Special reports are prepared for the Board of Supervisors.
5. Weekly reports on the harvesting and handling of crops and livestock and the effects of weather on them are prepared for the California State Crop and Livestock Reporting Service.
6. Imported foreign plant material growing grounds are given regular post entry inspections.
7. A library of technical publications issued by University of California, United States Department of Agriculture, State Department of Food and Agriculture, other institutions and other sources is maintained within the department.

8. Under the jurisdiction of the Bay Area Air Pollution Control Board and in cooperation with local fire marshalls the Agricultural Commissioner issues permits to burn agricultural and horticultural plant material harboring detrimental pests.
9. The Commissioner, a member of the County Consumer Protection Committee assists in the planning and development of procedural policy and the department investigates all complaints falling within its area of responsibility.

Mr. Richard E. Rominger - Director
California Department of Food and Agriculture
San Mateo County Board of Supervisors

Gentlemen:

As required by Section 2279 of the California Food and Agriculture Code I submit our Annual Crop Report. It shows the gross values, acreages and production of all agricultural commodities produced in San Mateo County during 1976. Not included are the costs of producing, harvesting and packaging these commodities. Values on all crops are F.O.B. - Point of Shipment.

The 1976 total gross value exceeded last year's value by slightly over 10% and currently is \$62,822,300.00. This increase was primarily due to price inflation and an increase in flower and nursery crops. The list of crops exceeding one million dollars in value totaled nine with cattle and calves falling below its previous level because of the current drought which has substantially affected our ability to produce both livestock and field crops. We expect to feel its full impact during 1977.

We wish to extend our sincere thanks and appreciation to all individuals, producers and agencies who supplied pertinent information for the compilation of this report.

Respectfully submitted,
George Ginilo
Agricultural Commissioner

Mr. Richard E. Rominger - Director
California Department of Food and Agriculture
and
San Mateo County Board of Supervisors

Gentlemen:

I am pleased to submit the Annual Crop Report of San Mateo County which shows the gross values, acreages, and production of all agricultural commodities produced in our County in 1977.

The overall gross value remained relatively stable, dipping slightly by 1.6% to \$61,827,100.00. This fact is most encouraging, especially in light of the continuing drought conditions and rising costs of production. Potted plants continued to show the greatest increase in total value, while rose and brussels sprouts crops increased slightly. With average rainfall figures of less than 50% of normal, values of six of nine million dollar crops decreased over the previous year. Recent rains should re-establish the trend of increased production and values of the pre-drought years.

We wish to extend our sincere thanks and appreciation to all individuals, producers, and agencies who supplied pertinent information for compilation of this report.

Respectfully submitted,
George Ginilo
Agricultural Commissioner

BERKELEY, CALIFORNIA 94720

Mr. Richard E. Rominger - Director
California Department of Food and Agriculture
and
San Mateo County Board of Supervisors

Gentlemen:

I am pleased to submit the Annual Crop Report of San Mateo County which shows the gross values, acreages, and production of all agricultural commodities produced in our County in 1978.

The overall gross value increased 11.8 million dollars or 19 per cent over the previous year for an all-time high of \$73,675,140. Reflecting this increase is a healthy and expanding agricultural industry that was temporarily stymied by two severe drought years. This is most encouraging in light of rising energy and transportation costs and competition from foreign floral imports. Water costs continued to play an important role for those growers relying on public utility companies to augment their supply.

Potted plants once again led the industry with a 4.6 million dollar or 17 per cent increase over the previous year. Chrysanthemums showed a healthy 28 per cent increase in gross value while vegetable production rose a substantial 31 per cent due primarily to miscellaneous specialty crops. Brussels sprouts increased 20 per cent while artichokes remained relatively stable. Cattle and calves recovered from the drought and once again entered the million dollar crop category.

We wish to extend our sincere thanks and appreciation to all individuals, producers, and agencies who supplied pertinent information for compilation of this report.

Respectfully submitted,

George Ginilo
Agricultural Commissioner

Correction:

In the narrative, strawberries
should read strawflowers.

Mr. Richard E. Rominger - Director
California Department of Food and Agriculture
and
San Mateo County Board of Supervisors

Gentlemen:

I am pleased to submit the Annual Crop Report of San Mateo County for 1979. The efforts of our agricultural industry are depicted below as acreages, yields, and gross values of the commodities produced. It is encouraging that these figures demonstrate our agricultural industry can adapt to increasing costs of operations, particularly energy, transportation and foreign competition.

The total gross value of all agricultural products continued its record pace, rising nearly 21% to an all-time high of \$88,706,300. Potted plants were responsible for much of this success, gaining \$9.6 million in gross value over last year. Six other million dollar crops had increases in gross value, with roses, strawberries, and artichokes gaining at least 20% in their individual crop values. Cattle and calves and ornamental nursery stock were the only million dollar crops to decrease in total gross values. Marguerites failed to make the million dollar crop category for the first time since 1967.

I wish to personally express my appreciation for the cooperation and assistance of all individuals, producers, and agencies who contributed pertinent information for compilation of this report. Special thanks goes to my staff, especially Agricultural Biologist Louis Masini, who compiled this report.

Respectfully submitted,

George Ginilo
Agricultural Commissioner.

Mr. Richard E. Rominger - Director
California Department of Food and Agriculture
and

San Mateo County Board of Supervisors
1st District - K. J. Speier; 2nd District - J. Ward;
3rd District - E. Bacciocco; 4th District - A. Gregorio;
5th District - W. Schumacher

I am pleased to submit our 1980 Annual Crop Report of San Mateo County. The efforts of our agricultural industry are given below as acreages, yields, and gross values of the commodities produced.

For the first time in the history of San Mateo County agriculture, the \$100 million mark in gross value was surpassed. The \$117.1 million high for 1980 represents a resounding increase of 32% over the 1979 value of \$88.7 million. While inflationary costs account for some of this increase, these figures indicate that agriculture is alive and well in San Mateo County.

Rising energy costs imposed on our horticultural industry caused cropping patterns to shift. Greenhouse expansion has been negligible while outdoor ornamental nursery stock crops substantially increased \$4.9 million, up approximately 134.7% over 1979 values. In my opinion this again demonstrates the adaptability of our growers to circumvent the spiraling costs of energy. Potted plants once again were responsible for much of the overall success, rising \$18.4 million or approximately 45.5% over the previous year.

I wish to express my thanks for the continuing cooperation of all individuals, growers, and agencies who contributed the information necessary for compilation of this report. Special thanks goes to my staff, particularly biologists Louis Masini and Mark Ashcraft, who compiled this report.

I would also like to acknowledge my predecessors for their fine efforts, since 1981 marks the Centennial Year for the County Agricultural Commissioners as established by the California Legislature in 1881.

Sincerely,

George Ginilo
Agricultural Commissioner

1981

I'm glad I'm a farmer.

Sometimes I'm angry about being a farmer.
And disappointed. Elated. Puzzled. Worried. And,
I suppose, every emotion in the book.

But I'm glad I'm a farmer.

Because I know what I am. And what I feel.

I feel I'm akin to my land and the things that
grow on my land . . .

And the sky over my land and the water that
falls on it and flows through it . . .

And the livestock that sustains itself upon
my land . . .

And the buildings that shelter me and my wife
and our children and the machines that help to

make my land fruitful.

These are a bone-deep part of me.

As is sweat. Cloudburst. Drought. Repairs.
Disease. Heartache. Market losses. And profits.
Sowing. Reaping. And a hundred and one setbacks
and successes, large and small, that other men
may never know. But that I know. And am
content with.

Not because farming is easy. It isn't. Or because
a farmer enjoys fame. He doesn't. Or because a
farmer like me is a wealthy man. I am not.

It's simply because I know what I am. And
I know what I feel.

I wouldn't have me any other way.

Me — the farmer.

SAN MATEO COUNTY AGRICULTURAL CROP REPORT 1981

County of San Mateo
Department of Agriculture
P. O. Box 999
Redwood City, Ca. 94064

Gov't Documents Dept.
UNIVERSITY LIBRARY
UNIVERSITY OF CALIFORNIA
DAVIS, CA 95616

Mr. Richard E. Rominger - Director
California Department of Food and Agriculture
and
San Mateo County Board of Supervisors
1st District - K. J. Speier; 2nd District - J. Ward;
3rd District - E. Bacciocco; 4th District - A. Gregorio;
5th District - W. Schumacher

I am pleased to submit our 1981 Annual Crop Report of San Mateo County. The efforts of our agricultural industry are given below as acreage, yields, and gross values of commodities produced.

The total gross value of San Mateo County agriculture continued to increase appreciably over 1980, rising 15% to 132.5 million. Although inflationary costs will account for the better part of the increase, the agricultural industry continues to play a significant role in the economy of San Mateo County.

Nursery, floral and vegetable products were among the most active commodities in San Mateo County. Potted plants rose by nearly 11 million dollars, a striking 18% over the 1980 value; while chrysanthemums, carnations, and strawflowers on the other hand, dropped collectively by 2.3 million dollars, a total decrease of 19% for these floral crops. Among the vegetable crops, ideal weather conditions favored a remarkable increase in artichoke production, resulting in a 48% rise in total value to 3.2 million dollars. Vegetable crops as a whole increased in value to 24 million dollars, a 20.4% overall increase from 1980.

I wish to express my thanks for the continuing cooperation of all individuals, growers, and agencies who contributed the information necessary for preparation of this report. Special thanks goes to my staff, particularly agricultural biologist Louis Masini, who compiled this report.

Sincerely,
George Ginilo
Agricultural Commissioner
