Cotton Quality Statistics, United States

1959-60

Introduction

This report contains information on the quality of cotton ginned during the 1959-60 season, and on the quality of cotton on hand in the United States on August 1, 1960. To facilitate comparison certain data contained in the reports for previous years are included. This information should be helpful to cotton growers and breeders and to merchants, consumers, research workers and others interested in the quality of the crop and the carry-over.

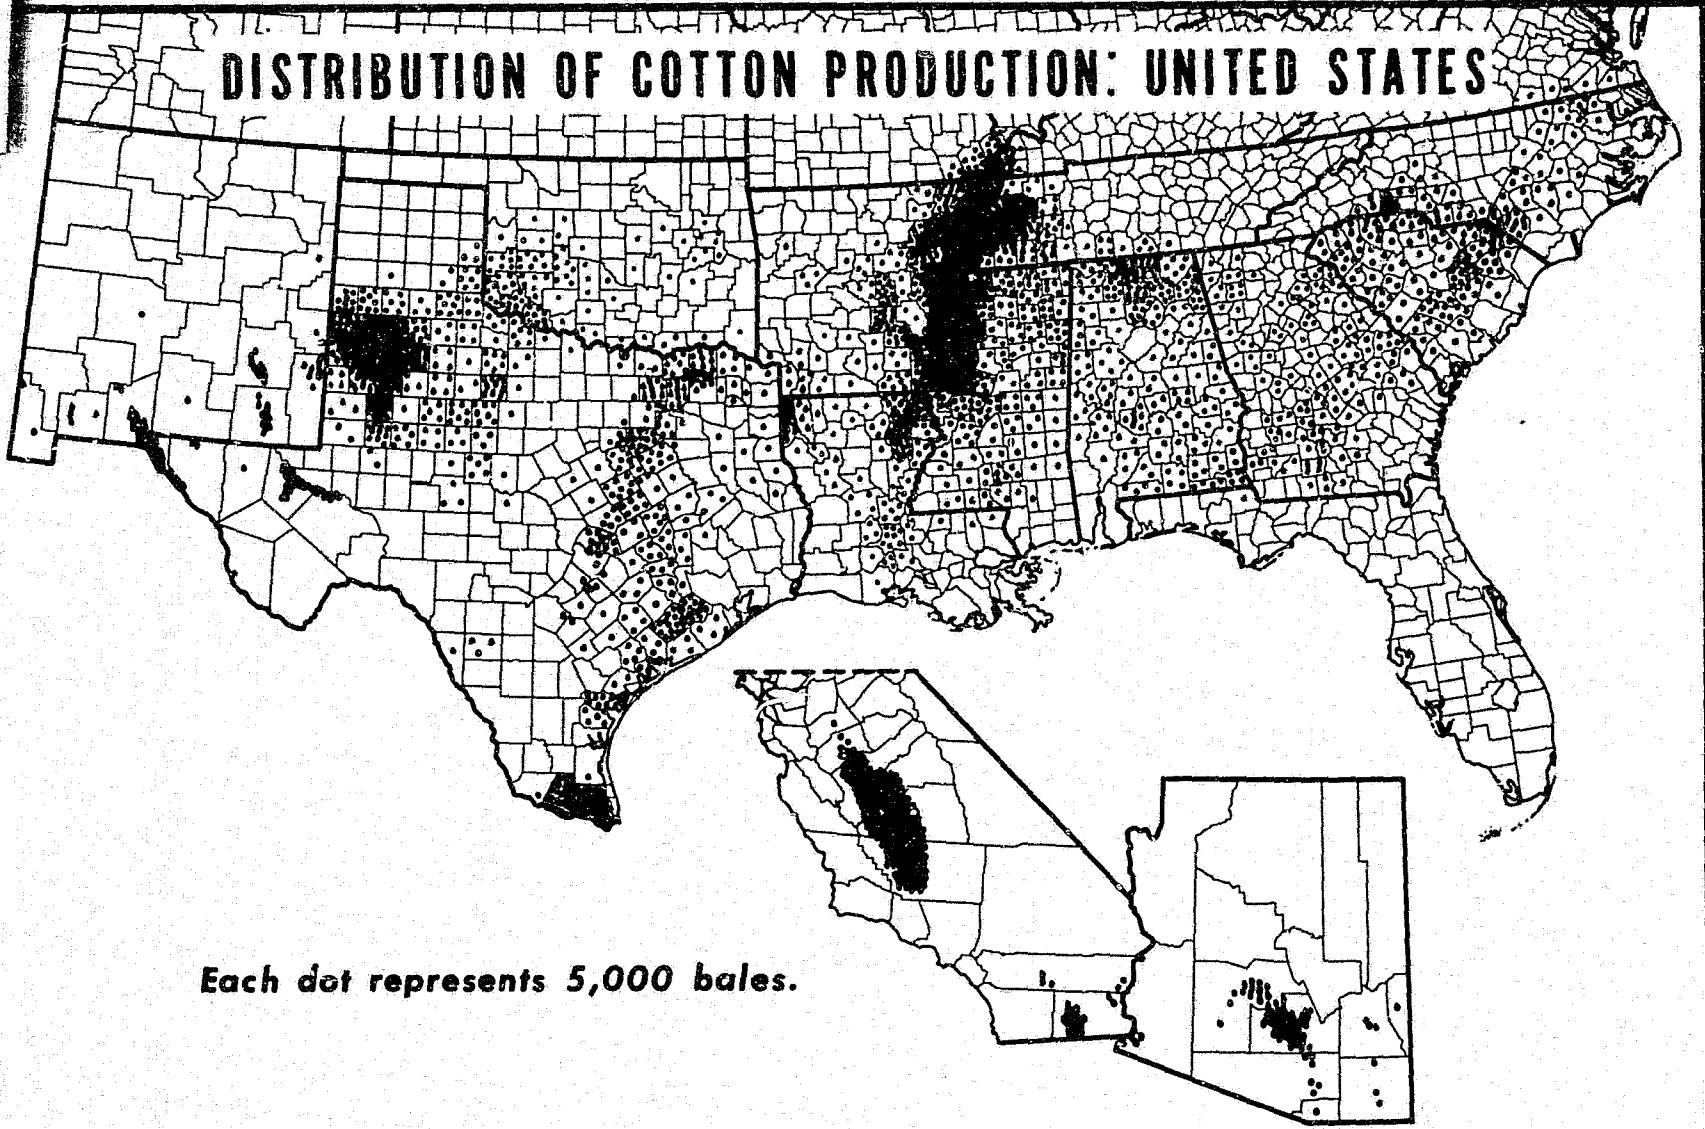

Estimates of the quality of the ginnings for most of the States are based on the classification of samples representing approximately 10 percent of the crop of upland cotton. The proportions of the various qualities found in the samples classed were applied to total ginnings as reported by the Bureau of the Census for upland and American-Egyptian cotton. For the purpose of preparing the estimates most cotton-producing States are divided into districts. Samples classed were applied to ginnings by ginning periods for all cotton-producing States as well as by districts for most cotton-producing States.

The report for the carry-over includes statistics on the grade and staple of upland and American-Egyptian cotton and on the staple of cotton of foreign growth in the United States on August 1, 1960. Estimates on the quality of cotton in the 1960 carry-over were based on actual re-sampling and classification of a representative proportion of the cotton stored in mills and in public storage including CCC stocks. Sample data were compiled for each State and for the principal types of storage and were raised to correspond with the number of bales reported by the Bureau of the Census.

Statistics by grades for the 1959-crop of upland cotton and the August 1, 1960 upland carry-over include estimates for White Plus, Light Spotted and Light Gray grades. The Official Cotton Standards of the United States for Grade of American Upland Cotton incorporate new descriptive standards for these grades effective on and after August 1, 1960.

Data presented in this bulletin on the tenderability of cotton on futures contracts indicates the quantities tenderable and untenderable with respect to grade and staple.

DISTRIBUTION OF COTTON PRODUCTION: UNITED STATES

Each dot represents 5,000 bales.

United States	96.0	91.7	96.7	95.8	32.7	32.6	32.8	32.8

^{1/} Computed by weighting the quantity in each grade by the 1937-39 average price per pound for such grade of 15/16 inch staple. Converted to an index with Middling White equaling 100.

^{2/} Averages calculated on numerical equivalents of the staple designations (for example, 29/32"=29).

^{3/} Includes Illinois and Kentucky 1956-58; Illinois, Kentucky, and Nevada 1959.

^{4/} GRADE INDEX COMPUTED BY USING MID-POINTS BETWEEN FULL GRADE WEIGHTS FOR PLUSSES, LIGHT SPOTTED AND LIGHT GRAY.

1/ Official standards for Extra White cotton abolished effective August 15, 1953. White and Extra White combined in 1952 and earlier years and Good Middling includes higher grades. Plus grades of White included with straight grades; Light Spotted with Spotted; and Light Gray with Gray.
 2/ Other Colored includes Low Middling Spotted; all grades of Tinged, Yellow Stained and Gray.
 3/ As reported by the Bureau of the Census.
 4/ Carry-over at the beginning of the season plus crop.
 5/ Supply minus carry-over at the end of the season.
