Comparisons of Averages for Years 1928, 1929, and 1930.....	20

INTRODUCTION

The Division of Agricultural Economics and the Division of Agricultural Extension of the University of Minnesota, the Bureau of Agricultural Economics of the United States Department of Agriculture and a group of farmers in Steele County, Minnesota, have been cooperating during the years 1928, 1929, and 1930 in a farm account project, known as the Better Farming Club of Steele County. The work was started January 1, 1928, along with similar clubs in nearby counties, viz., Dodge, Freeborn, Goodhue, Rice, and Waseca Counties. This report is a summary of the results for 1930, with a brief comparison with the results for 1928 and 1929 shown on page 20.

The project has been under the direction of G. A. Pond and W. P. Ranney of the Division of Agricultural Economics, University of Minnesota. Hearty support and assistance has been rendered by H. J. Van Metre, County Agricultural Agent of Steele County.

Type of Farming in Steele County

The farms selected for the study are livestock farms on which dairy cattle are the principal source of income. Cream for manufacture into butter is the principal dairy product sold. This is marketed through farmer owned cooperative creameries specializing in the manufacture of high quality butter. The skimmilk is retained on the farm and fed to hogs and poultry. These two classes of livestock are also an important source of income.

The principal crops grown are corn, oats, barley and hay. These crops are raised primarily as livestock feed altho a seasonal surplus may be sold. Wheat, sweet corn, canning peas, and flax are grown to a limited extent as cash crops. These farms are fairly typical of the system of dairy farming prevailing in southeastern Minnesota. This report shows that the receipts from the sales of

dairy products constitute approximately one-third, and receipts from hog sales approximately one-third of the average cash income for 32 cooperators in Steele County. These are approximately the same results as shown by the 1928 and 1929 reports.

Records Kept

The records kept by the cooperators included inventories at the beginning and end of the year, cash receipts and expenses, a report of feed fed to the various classes of livestock, and a record of farm produce used by the farm family. Supplementary information was also secured during the year regarding crop and livestock production and practices.

The cooperators were assisted and supervised in keeping their records by the field agent, Mr. R. C. Bevan, who visited each farm in the six counties several times during the year. In addition to securing the supplementary information, the field agent's duties included numerous services, viz., securing a monthly list of prices of farm products prevailing in the area, helping the farmer to place uniform values on real estate and equipment, checking the cash and feed records, and answering any questions that might arise as to how the entries should be made in the account book. The supervision resulted in uniformity in the type of records secured, in the inventory valuations and in the prices at which feed and farm produce were charged.

At the end of the year each farm was visited by a representative of the University who checked the records for completeness and accuracy. The books were then taken to the central office at University Farm, where every entry was again checked and omissions were noted. Any discrepancies found were referred back to the farmers for correction. This double checking insured a high degree of accuracy and completeness in each individual record.

Purpose of Project

The Better Farming Club renders assistance to the cooperators in keeping such records as will enable each operator to know the returns for his labor and management, the returns to capital and family labor, and the actual earnings from the farm that the family had to spend for living and personal use. The main purpose of the Club is to secure such data and information, which when compared with that secured on other farms will enable the cooperator to increase his efficiency in various enterprises and to organize his farm on a more profitable basis. For the latter purpose it was necessary for all the cooperators, tenants as well as owner operators, to include the whole farm business in order that the results would be on a comparative basis. The earnings as shown in this report are computed on an owner basis for the purposes of comparison, but each tenant was supplied a statement of his earnings on the basis of the rental system under which he was operating. Altho there is some variation in prices paid for feeds bought, uniform prices were used in making up the feed summaries and in placing values on the inventories of feed and farm products.

Capital Investment in Farm Business

The average size of the farms in this report is 183 acres. The average farm inventory is \$27,755. This does not include the value of the house in which the operator lived. In 1930, fifty-three per cent of the average farm inventory consisted of land; sixteen per cent of permanent improvements; eight per cent of feeds and supplies; seven per cent of machinery and equipment; and sixteen per

cent of livestock, of which almost two-fifth or an average of \$1,874 consists of the average cow inventory.

Analysis of the Farm Business

On pages 5 and 6 are presented financial summaries of the year's business, showing the average results for the 32 farms on which the work was completed for the twelve months' period, January 1, 1930, to December 31, 1930, and the high and low figure for each item. In the "your farm column" the results of each individual farm business is inserted in the copy sent to the farmer in order that he may compare his figures with the average.

The data on page 5 and the remaining pages, which set up the ranking in the various measures of efficiency, should suggest to each cooperator some possibilities for improvement in his organization of the various enterprises and of his business as a whole. Altho each farm is an individual problem, and has its particular advantages and limitations, the type of farming is fairly uniform in the county and undoubtedly is adapted to the present general conditions. This study should bring out trends that may be taking place toward more profitable combinations of enterprises, and to the more efficient methods of management within the enterprises.

Returns to Operators for Their Labor and Management

The average cash receipts per farm were \$5154. In addition farm produce to the value of \$311 was consumed by the farm family. The total average receipts per farm is the sum of those two items \$5465. The average total expense per farm \$3151, includes \$2905 cash expense, an estimated allowance of \$132 for board of hired labor, and an average inventory decrease of \$114 per farm. The difference between the total income and total expense figure is \$2314. This is the return which the farmer received for his own labor and management, the services of members of his family, and the use of his capital. After deducting a charge of five per cent on the average inventory valuation, \$1388, for the services of capital, there remains \$926 for the services of the farmer and his family. The average value of family labor used, if computed at hired man's wages, was \$442. The average operator's labor earning is the family earnings less their allowance of \$442, or \$484. This is the return to the farmer for his labor and management over and above a five per cent return for his capital and going wages for other members of the family. This return is considerably below that for 1928 and 1929, due to lower prices for products sold and a decrease in the value of a number of inventory items. The results of the three years are compared on page 20.

Summary of Farm Inventories - 1930

Items	Your farm	Average	Range	
			Highest	Lowest
Size of Farm (acres)		183	505	80
Size of Business (days of prod. work) (1)		693	1475	375
Average farm inventory (without house)		\$27755	\$78020	\$11237
Land		14742	50380	3975
Farm improvements		4535	10590	1934
Machinery & equipment (total)		2075	5208	706
Gen. machinery and equipment		1440	3013	497
Tractor		333	1275	-
Truck		38	506	-
Auto (farm share)		181	513	-
Gas engine (farm share)		16	77	-
Electrical equip. (farm share)		67	523	-
Feeds and seeds		2070	5010	756
Misc. supplies		31	287	-
Horses (total)		537	1500	168
Horses		497	975	168
Colts		40	525	-
Productive livestock (total)		3765	9747	1366
Cows		1874	4860	710
Other cattle		1045	4388	99
Hogs		597	1864	-
Sheep		45	534	-
Poultry		204	540	30

(1) Explanation of Term: "Days of Productive Work"

The total "Days of Productive Work" for any one farm are a measure of size of that farm business using the average number of "ten-hour days" of man labor required per head of productive livestock and per acre of crops as a common figure for combining the size of the crop and the size of the livestock enterprises.

The number of days of productive work for each animal and acre of crops, computed from data presented in Minnesota Tech. Bul. 44, "A Study of Dairy Farm Organization in Southeastern Minnesota," are listed as follows:

Item	Per	No. of Days of Prod. Work	Item	Per	No. of Days of Prod. Work
Cows	Cow	16.6	Corn for grain (Husked)	Acre	2.1
Other Cattle	Animal Unit*	7.6	Corn for grain (Husk. & Shred.)	"	2.8
Sheep	Animal Unit*	2.7	Corn for silage	"	2.6
Poultry	100 hens	20.1	Corn hogged	"	1.25
Hogs	100 lbs. pork prod.	.55	Corn for fodder	"	1.8
Alfalfa	Acre	1.5	Sweet Corn	"	3.0
Tame & W. Hay	"	.6	Potatoes	"	6.4
Sm. Grain & Flax	"	1.0	Sugar beets	"	4.0
" " Hogged "	"	.4			
Canning peas	"	2.5			

*Animal Unit represents one cow, one bull, two head of young cattle, seven head of sheep, fourteen lambs, five hogs, ten pigs, or 100 hens.

Summary of Farm Earnings - 1930

CASH EXPENSES <u>Items</u>	Your Farm	Average	Range	
			Highest	Lowest
Tractor (new and exp.)		\$ 197	\$ 947	\$ -

(7) Farm produce used in house		311	563	154
(8) Total receipts (sum 5, 6, & 7)		5465	13673	2540
Total expenses (4)		3151	9062	686
(9) Returns to capital & family labor (8 minus 4)		2314	4611	375
(10) Interest on farm inventory		1388	3903	562
(11) Family labor earnings (9 minus 10)		926	2566	-867
(12) Unpaid family labor		442	2340	15
(13) Operators labor earnings (11 minus 12)		484	2506	-1757

Summary of Farm Earnings, 1930 (A)

<u>EXPENSES AND NET DECREASES</u>	Your Farm	Average	Range	
			Highest	Lowest
Total power machinery and equipment		\$325	\$1187	\$ 40
Tractor		130	724	-
Truck		43	181	-
Auto (farm share)		104	279	-
Gas engine (farm share)		10	59	-2
Electric plant or current (farm share)		38	110	-
General Machinery and equipment		215	496	-112
Bldgs., fencing, tiling		200	613	-55
Hired labor		353	1434	-
Prod. livestock misc. expense		100	340	2
Misc. horse expense		5	63	-
Crop		231	846	17
Taxes and Insurance		327	1237	134
General farm		25	58	12
Decrease in Crops and Feeds		229	1654	-
Decrease in horses		39	218	-
Board for hired labor		132	490	-
Interest on farm inventory		1388	3903	562
Unpaid family labor		442	2340	15
(1) Total expenses		4011	10663	1771
<u>RETURNS AND NET INCREASES</u>				
Items				
Increase in crops and feeds		-	1292	-
Gross returns from all prod. livestock		4753	10150	1876
Cows (including milk to other livestock)		2036	5170	791
Other cattle		683	3528	128
Hogs		1546	3899	-
Sheep		17	341	-
Poultry		471	1111	33
Outside and misc. receipts		94	935	-
Increase in horses		-	175	-
(2) Total returns and net increases		4847	11498	2366
(3) Milk produced and fed on farm		352	912	44
(4) Gross returns (2 minus 3)		4495	10651	2322
Total expenses (1)		4011	10663	1771
(5) Operators labor earnings (4 minus 1)		484	2506	-1757
Gross returns per \$100 expense		117	167	70

(A) Cash receipts and expenses are adjusted for changes in inventory for each enterprise and for each item of expense in order to show gross returns and net increases, and total expenses and net decreases. The operator's labor earnings are the same as those on page 5.

Effect of Well Balanced Efficiency on Farm Profits

It is quite evident from this report that few farmers have a monopoly on efficiency. Quite often farm operators show efficient management in one part of the farm business, which is offset by poor results in other phases of the business. These farmers get medium returns while those who fall down all along the line get the lowest returns, and those few who can manage a large volume of business with high all around efficiency are well paid for their labor and management.

The data in this report indicates that the same factors show a relationship to operator's labor earnings as in 1928 and 1929. Size of business in 1930 was a disadvantage to a few who showed a loss, for the larger the business the greater the loss. However, those who excelled in most of the other factors had a return for their labor and management, which tended to be increased by size of business. Hence, a balanced standing in the following eight factors is quite essential in order to secure the highest possible returns:

1. Returns over feed cost per head of livestock.
2. Pounds of butterfat per cow.
3. Index of crop yields.
4. Index of selection of high return crops. (Crops are ranked on basis of average net return for a ten-year period in the following order on pages 10 and 11: A, B, C, D.)
5. Productive livestock units per 100 acres.
6. Size of business - days of productive work.
7. Days of productive work per worker.
8. Equipment and farm power expense (buildings, fencing, all machinery, horse feed, and miscellaneous horse expense) per day of productive work.

In Chart 1 is shown the effect of the number of the above factors in which the farmer excels on his labor earnings. The five farmers who excelled in six or more factors had average earnings of \$1353 above the average of ten farmers who did not excel in more than two factors.

Chart 1. Relation of Operator's Labor Earnings to the Number of Factors in which Farmer is above the average in efficiency.

Number of factors in which farm excels	No. of farms	Your Farm	The length of the shaded lines are in proportion to the average operator's labor earnings	Average Operator's Labor Earnings
Six or more	5		XXXXXXXXXXXXXXXXXXXXXXXXXXXX	\$1515
Three to five	17		XXXXXX	370
Two or less	10		XXX	162

The array in Chart 1 suggests that it will be worth while for each cooperator to study carefully his ranking on page 8, and learn through his standing in respect to each of the above factors the elements of strength and weakness in his farm business.

Measures of Farm Organization and Management Efficiency

Farm No.	Oper. Earn.	Returns per Head of Live-stock	Lbs. B. F. per Cow	Index of Crop Yields	Index of Selection of High Return Crops	Prod. Units per 100 Acres	Size of Business. of Prod. Days of Work per Worker	Farm Power Mach. & Eq., Bldg. & Fenc. Exp. per day of Prod. Work

Total acres in farm			99.3					
% land tillable			78.					
Index of tillable land in high return crops			34.2					

Some methods farmers use to increase their crop yields

1. Tile if necessary.
2. Plow under legumes--grow sweet clov. in small grain.
3. Try commercial fertilizers.
4. Utilize manure effectively.
5. Use rotated legume pasture.
6. Raise & feed hogs on these pastures & hog down corn.
7. Keep plenty of livestock.
8. Grow recommended varieties of crops.
9. Use best tested seed available.
10. Thorough & timely seedbed preparation--keep weeds under control.

Summary of Amount of Livestock

	Your farm	Average	Highest	Lowest
13 Large Farms; Above 199 Acres				
Number of horses (with tractors) (11 farms)	6.8	9.0	4.0	
Number of horses (without tractors) (2 farms)	6.9	7.8	6.0	
Number of colts	1.2	4.4	0.0	
Number of cows	21.66	38.13	9.42	
Number of cows per worker	8.1	10.6	5.1	
Head of other cattle	26.2	60.3	4.8	
Litters of pigs raised	16.0	30.0	7.0	
Pounds of pork produced	23292.0	39375.0	12574.0	
Head of sheep (2 lambs equal 1 head)	6.61	69.86	0.0	
Number of hens	173.0	286.0	0.0	
Total number of prod. livestock units	47.76	79.33	23.08	
Number of workers	2.70	4.66	1.13	
Number of hired workers	.75	1.60	0.0	
11 Medium-sized Farms; 140 to 199 Acres				
Number of horses (with tractors) (8 farms)	5.9	7.8	4.0	
Number of horses (without tractors) (3 farms)	6.8	7.3	6.0	
Number of colts	.8	2.6	0.0	
Number of cows	15.09	23.08	9.67	
Number of cows per worker	7.5	10.7	4.5	
Head of other cattle	16.3	25.2	11.3	
Litters of pigs raised	12.0	20.0	0.0	
Pounds of pork produced	17583.0	35758.0	0.0	
Head of sheep (2 lambs equal 1 head)	6.5	41.65	0.0	
Number of hens	195.0	519.0	73.0	
Total number of productive livestock units	34.11	47.03	18.49	
Number of workers	2.07	3.25	1.33	
Number of hired workers	.77	2.00	0.0	
8 Small Farms; 80 to 139 Acres				
Number of horses (with tractors) (2 farms)	4.0	4.0	4.0	
Number of horses (without tractors) (6 farms)	3.7	4.9	3.0	
Number of colts	.6	2.0	0.0	
Number of cows	12.94	14.88	10.92	
Number of cows per worker	7.8	10.3	5.5	
Head of other cattle	12.4	18.0	8.1	
Litters of pigs raised	7.0	11.0	0.0	
Pounds of pork produced	12416.0	22144.0	7580.0	
Head of sheep (2 lambs equal 1 head)	0.0	-	-	
Number of hens	198.0	281.0	79.0	
Total number of prod. livestock units	26.44	35.52	20.55	
Number of workers	1.77	2.42	1.13	
Number of hired workers	.27	2.13	0.0
