INTRODUCTION

The Division of Agricultural Economics and the Division of Agricultural Extension of the University of Minnesota, the Tennessee Valley Authority and the county extension services of several northwestern Minnesota counties are cooperating in a phosphate test demonstration project and in a farm management service. This service is offered to a selected group of farmers who have agreed to demonstrate the value of phosphate fertilizer and who have also agreed to keep farm business records. The phosphate is provided by the T.V.A. and the fieldman is provided by the T.V.A. and the Agricultural Extension Service. Each farmer pays the freight and other miscellaneous expenses that may occur between the point of shipment and the farm on all the T.V.A. phosphate furnished and \$10.00 per year to cover the summarization of the records and other miscellaneous expenses. The balance of the cost is defrayed by the University of Minnesota.

The analysis of the farm business record and the preparation of the reports are handled by the Division of Agricultural Economics under the direction of G. A. Pond and T. R. Nodland. The field organization is handled by the Division of Agricultural Extension with C. L. McNelly in charge of this work. J. R. Burkholder has been fieldman since the organization of the project. County agricultural agents who cooperated in this project include Howard Grow, W. L. Beneditz, Ray Reiersen, George Landsverk, Lester Lerud, Carl G. Ash, Rudolph Stolen, John Dysart, M. C. Waingsness and J. A. Salisbury.

The following tabulation shows by counties the number of cooperators who completed records in 1940:

Kittson	8	Polk	18
Mahnomen	9	Red Lake	10
Marshall	15	Roseau	<u>15</u>
Norman	15		
Pennington	10	Total	100

The tables on page 4 and succeeding pages show data for 98 farms. Two farms have been omitted from all the averages in the tables because the records were not sufficiently complete for a full analysis.

The records kept by the cooperators include inventories at the beginning and end of the year, cash receipts and expenses and a record of the farm produce used by the farm family. Complete household and personal records were also kept by 30 cooperators. Supplementary information was secured during the year regarding crop and livestock production practices.

At the end of the year, the books were taken to the central office at University Farm, where they were checked and summarized. For the purpose of comparison, the earnings as shown in this report are computed as if each operator was a full owner; however, each tenant is supplied a statement of his earnings on the basis of the rental system under which he is operating.

TYPE OF FARMING*

Wheat, flax, sugar beets, potatoes and legume seeds are grown for sale as cash crops. Dairying is the most important livestock enterprise with sheep ranking second. Some beef cattle and poultry and a small amount of hogs are also raised. Oats, barley, hay and pasture are important feed crops.

TOPOGRAPHY, SOILS AND WEATHER

The Red River Valley in the western part of the area is very level with black surface soils that are free of stone except in a few places where the deposit from glacial Lake Agassiz is very shallow. Along the beaches of the glacial lake the soils are gravelly and interspersed with poorly drained areas. In extremely wet seasons the surplus water can be drained from the land only very slowly. A large acreage of poorly drained land is used for hay.

East of the Red River Valley is an area lying within the old lake bed that is also very level. The soils are complexly intermixed and poorly drained. Bog areas are numerous, part open and part timbered with tamarack and spruce. A large amount of peat is found in the eastern portion of the territory.

*For a more complete description of the area see Engene, S. A., and Pond, G. A., "Agricultural Production and Types of Farming in Minnesota", Minnesota Bulletin No. 347, May, 1940.

Table 1. Monthly and Annual Precipitation

	Ada		Fosston		Angus		Roseau	
	Precipitation	Departure from normal	Precipitation	Departure from normal	Precipitation	Departure from normal	Precipitation	Departure from normal
	Inches	Inches	Inches	Inches	Inches	Inches	Inches	Inches
January	0.11	-0.33	0.37	-0.07	0.16	-0.20	0.29	-0.28
February	0.74	+0.25	0.87	+0.27	0.48	+0.03	0.52	+0.02
March	1.06	+0.39	1.15	+0.19	0.65	+0.09	0.73	-0.22
April	1.51	-0.15	2.76	+0.49	1.98	+0.44	2.56	+1.30
May	1.79	-1.04	1.62	-1.02	1.16	-1.22	0.40	-1.89
June	2.84	-0.81	1.68	-2.01	0.61	-2.81	1.64	-1.53
July	3.06	+0.10	3.64	+0.79	5.56	+2.60	3.88	+0.62
August	2.83	-0.01	1.71	-1.13	2.44	-0.30	2.09	-0.76
September	0.34	-1.90	0.80	-1.66	1.44	-0.61	2.40	-0.15
October	1.90	+0.41	2.20	+0.68	1.84	+0.40	3.47	+2.02
November	0.84	+0.09	2.81	+1.93	1.30	+0.58	1.33	+0.44
December	0.66	+0.10	0.35	-0.31	1.13	+0.61	0.48	-0.12
1940 total	17.68	-2.90	19.96	-0.85	18.75	-0.39	19.79	-0.55
1939 total	16.91	-3.67	17.18	-3.63	17.95	-1.19	16.44	-3.90
1938 total	23.10	+2.52	19.06	-1.75	15.06	-4.08	17.16	-3.18
Normal annual precipitation	20.58		20.81		19.14		20.34	

The year 1940 as a whole was normal in regard to temperature. The early spring was considerably cooler and slightly drier than usual. All the crops were damaged materially by a drought in June and by warm dry weather in early July. Precipitation was below normal in August and September.

Summary of Farm Inventories (Beginning of Year), 1940

Items	Your farm	Average of 98 farms	20 most profitable farms	20 least profitable farms
Size of farm (acres)		397	585	419
Size of business (work units)*		456	622	463
Horses	\$ _____	\$ 336	\$ 380	\$ 329
Productive livestock (total)		1,461	1,773	1,385
Dairy and dual purpose cows		618	675	649
Other dairy & dual purpose cattle		340	398	382
Beef cattle (including feeders)		156	269	0
Hogs		55	67	56
Sheep (farm flock)		249	310	263
Poultry (including turkeys)		43	54	35
Crop, seed, and feed		870	1,318	1,076
Mach. & equipment (total)		2,141	2,982	2,490
Power mach. (f. share)		957	1,276	1,115
Crop & gen. mach.		1,009	1,497	1,194
Livestock equip. & supplies		175	209	181
Buildings, fences, etc.		3,585	4,046	4,150
Land		5,246	8,026	5,819
Total farm capital	\$ _____	\$13,639	\$18,525	\$15,249

*Explanation of term: "Work units."

The total "work units" for any one farm is a measure of size of that farm business. It is the accomplishment of a farm worker in a ten-hour day working on crops and productive livestock at average efficiency.

The number of work units for each animal and each acre of crops used in this report are listed as follows:

Item	Per	No. of work units	Item	Per	No. of work units
Dairy and dual purpose cows	cow	15.5	Small grain	acre	.6
Other dairy & dual purpose cattle) animal	2.4	Seed potatoes	"	4.3
Beef breeding herd) unit*	4.3	Other potatoes	"	3.8
Sheep - farm flock)	2.2	Sugar beets	"	2.5
Hens	100 hens.	28.0	Corn, husked	"	1.3
Feeder cattle)	.3	Corn, shredded	"	2.0
Hogs) 100 lbs.	.3	Corn silage	"	1.4
Turkeys) produced	.7	Corn fodder	"	1.1
			Alfalfa hay	"	.8
			Other hay crops	"	.6
			Legume seed	"	1.0

*Animal unit represents one cow, one bull, one feeder steer or heifer, two head of other cattle, seven head of sheep, fourteen lambs, five hogs, ten pigs, 100 hens, or 1,400 lbs. turkeys produced.

Summary of Farm Inventories (End of Year), 1940

Items	Your farm	Average of 98 farms	20 most profitable farms	20 least profitable farms

Interest on farm capital	_____	691	947	764
(1) Total expenses and net decreases	\$ _____	\$ 2,406	\$ 3,143	\$ 2,831
RETURNS AND NET INCREASES				
All productive livestock	\$ _____	\$ 1,881	\$ 2,559	\$ 1,751
Dairy and dual purpose cows	_____	735	934	677
Other dairy and dual purpose cattle	_____	351	340	406
Beef cattle (including feeders)	_____	117	223	0
Hogs	_____	208	325	203
Sheep - farm flock	_____	232	268	292
Turkeys	_____	135	327	90
Chickens	_____	103	142	83
Crops, seed and feed	_____	757	1,879	450
Income from work off the farm	_____	116	206	74
Agricultural conservation payments	_____	252	327	270
Miscellaneous	_____	89	88	98
(2) Total returns and net increases	\$ _____	\$ 3,095	\$ 5,059	\$ 2,643
(1) Total expenses and net decreases	\$ _____	\$ 2,406	\$ 3,143	\$ 2,831
(3) Oper. labor earnings (2) minus (1)	\$ _____	\$ 689	\$ 1,916	\$ -188

(A) Cash receipts and expenses are adjusted for changes in inventory for each enterprise and for each item of expense in order to show total receipts and net increases, and total expenses and net decreases. The operator's labor earnings are the same as those on page 6.

ANALYSIS OF THE REASONS FOR DIFFERENCES IN OPERATOR'S EARNINGS

The financial statement on the preceding pages shows that there is a wide range in earnings. The average operator's labor earnings for the 20 most profitable farms was \$1,916, and for the 20 least profitable farms \$-188. The difference between the averages for these two groups was \$2,104. Some of the causes for these differences in earnings may be beyond the control of the farmer. It is significant, however, that the data in this report indicate that there are several factors which show definite relationships with operator's labor earnings and which suggest opportunities for increased earnings. The more important of these factors and their relationship with earnings are presented in the following tables.

Table 3. Relation of Crop Yields to Farm Earnings

Per cent crop yields were of the average for all 98 farms		No. of farms	Average operator's labor earnings
Group	Average		
Below 80	64	23	\$ 311
80-123	99	54	694
124 and above	141	21	1,093

High production per acre, up to certain limits, tends to lower the cost per bushel of grain or per ton of hay. Any possible method of management that will increase crop yields and therefore lower cost of production more than the extra expense incurred in securing the higher yields should be given consideration.

Table 4. Relation of Choice of Crops to Farm Earnings

Per cent of tillable land in high return crops*		No. of farms	Average operator's labor earnings
Group	Average		
Below 25.0	20.2	21	\$ 439
25.0-42.9	33.8	52	690
43.0 and above	49.5	25	898

*Crops are marked on page 14 as (A), (B), (C), and (D). All of acres in (A) crops, one half of acres in (B) crops, and one-fourth of acres in (C) crops are used in calculating per cent of tillable land in high return crops.

As a rule, on these farms, such crops as alfalfa, hard spring wheat, flax, barley, sugar beets, and potatoes bring a higher net return per acre than other crops usually grown. Additions can be made to earnings by putting as high a percentage as possible of the tillable land into these higher return crops.

Table 5. Relation of Returns from Productive Livestock to Farm Earnings

Index of gross returns from productive livestock*		No. of farms	Average operator's labor earnings
Group	Average		
Below 88	76	24	\$ 398
89-112	99	50	777
113 and above	124	24	798

*Feed records were not kept on these farms. The index represents gross returns and is weighted by the number of animal units of each class of livestock.

Many of these farms are livestock farms. High gross returns from livestock are accompanied by high farm income. A large proportion of the crops raised are fed on the farm and some additional feed is purchased. Feed is the major item of cost in livestock production and livestock constitute an important source of income on these farms. There are a number of reasons for differences among farms in livestock returns. High productivity per animal and economy in the use of feed and labor are important. Other factors of considerable importance are kind of feed used, quality of pastures, balance of ration, degree of sanitation, and kind of shelter and equipment.

Table 6. Relation of Amount of Productive Livestock to Farm Earnings

<u>Productive livestock units per 100 acres*</u>		<u>No. of farms</u>	<u>Average operator's labor earnings</u>
<u>Group</u>	<u>Average</u>		
Below 6.9	5.4	19	\$ 531
6.9-12.9	9.4	57	630
13.0 & above	15.5	19	761

*Acres in timber not pastured, roads, waste and farmstead were not included.

Three very specialized crops farms having more than 60% of the income from crops were omitted from the averages in table 6. The amount of livestock is an important factor only on livestock farms. If the livestock is yielding a net return, an increased amount of livestock adds to size of business and the opportunity to increase the farm earnings. Livestock produces manure and aids in keeping up the fertility of the land, and utilizes waste products on the farm. Livestock also helps to provide productive employment throughout the year. Any method that aids in utilizing the available resources to full and efficient capacity should add to the farm income.

Table 7. Relation of Size of Business (Work Units) to Farm Earnings

<u>No. of work units</u>		<u>No. of farms</u>	<u>Average operator's labor earnings</u>
<u>Group</u>	<u>Average</u>		
Below 325	270	24	\$ 396
325-549	423	52	600
550 and above	735	22	1,220

The size of the farm business is measured in terms of work units. A work unit is the accomplishment of a farm worker in a ten-hour day, working on crops and productive livestock at average efficiency or ten hours of work off the farm for pay. Average farm earnings tend to increase with an increase in size of business. For farmers operating their farms at a loss, the larger the volume of business, the larger will be the loss, but a farmer who is making a profit could make a larger profit if he increased his size of business, providing that in so doing he does not lower materially the efficiency in some one or more important branches of his business. Those farmers who have large businesses usually have more flexibility of their organization than does the man with a small business, and can utilize more efficiently and to better advantage available labor, power, machinery and buildings. The size of the farm business may be increased by farming more land, by keeping more livestock, or by keeping livestock or growing crops of a more intensive type.

Table 8. Relation of Amount of Work Accomplished per Worker to Farm Earnings

Work units per worker Group	Average	No. of farms	Average operator's labor earnings
Below 180	148	22	\$ 298
180-249	213	53	658
250 & above	299	23	1,124

More units of work accomplished per worker reduces the labor charge per unit of business. Higher labor accomplishment can be secured in several ways. In the first place, the business must be large enough so that there will be at least sufficient work available for the family labor. The farm should be so organized that the labor requirements are well distributed throughout the year. Handling pastures in such a way that as large a proportion as possible of the year's feed for livestock may be obtained from them helps to reduce labor requirements. Proper planning of the farm work and economical use of labor-saving machinery help to increase the work accomplished per worker.

Table 9. Relation of Power, Machinery, Equipment and Building Expense to Farm Earnings*

Expense per work unit Group	Average	No. of farms	Average operator's labor earnings
\$2.30 & above	\$2.88	22	\$423
\$1.30-2.29	1.76	53	730
Below \$1.30	1.12	23	850

*Includes building, fencing, all crop machinery and livestock equipment, horse feed, and miscellaneous horse expense.

The expense factor does not show as high relationship with earnings when prices are high as when they are low. Some farms are under-equipped. On a few farms, excessive expenses constitute the main factor causing earnings to be very low.

Some of the cash expenses can be kept down by careful management. Oftentimes necessary repairs and improvements can be made by using the available farm labor rather than by hiring extra help. Repairs and overhauling should be done before spring work begins insofar as possible; or on rainy days or in other spare time during the summer. Reducing the number of horses to the minimum required for efficient operation of the farm helps reduce the power expense. In some cases, farmers can offset some or all of the power and machinery expense by using their equipment for outside work.

EFFECT OF WELL-BALANCED EFFICIENCY ON FARM PROFITS

It is quite evident from this report that few farmers have a monopoly on efficiency. Quite often farm operators show efficient management in one part of the farm business, which is offset by poor results in other phases. These farmers get medium returns while those who fall down all along the line get the lowest returns, and on the other hand those few who can manage to attain high efficiency in all parts of their organization receive returns well above the average. This is well illustrated in Table 10.

Table 10. Relation of Operator's Labor Earnings to the Number of Factors in which the Farmer is Above Average

No. of factors in which farm excels	No. of farms	Your farm	The length of the shaded lines are in proportion to the average operator's labor earnings	Average operator's labor earnings
None or one	14	_____	XXXXXXXXXX	\$ 393
Two or three	46	_____	XXXXXXXXXX	423
Four or five	26	_____	XXXXXXXXXXXXXXXXXXXXXX	883
Six or seven	12	_____	XX	1,636

The array in Table 10 indicates that it will be worth-while for each cooperator to study carefully his ranking on pages 12 and 13, and learn his standing in respect to each of the above factors and the elements of strength and weakness in his farm business.

Measures of Farm Organization and Management Efficiency, 1940

Measures used in chart on page 13	Your farm	Average of 98 farms	20 most profit- able farms	20 least profit- able farms
Operator's labor earnings	\$ _____	\$689	\$1,916	\$-188
(1) Crop yields*	_____	100	112	83
(2) % of tillable land in high return crops**	_____	34.9	37.5	34.2
(3) Gross returns from prod. livestock***	_____	100	106	92
