A PLAN B RESEARCH PAPER

Submitted to

Michigan State University

in partial fulfillment of the requirements

for the degree of

MASTER OF SCIENCE

Department of Agricultural Economics

April 29, 1977

Outline

This paper represents Part II of a study whose tentative title and outline is:

THE MICHIGAN WINE AND GRAPE INDUSTRY IN THE CONTEXT OF NATIONAL PRODUCTION AND CONSUMPTION TRENDS

	page
Part I Acreage and Production By Ken Nye, Michigan Farm Bureau	
Part II Wine Consumption and Imports By Patrick Shea	
A. Definitions	1
B. Presentation and Interpretation of Data	1
C. National and Regional Consumption and Imports	2
Part III Institutional Factors By Ken Nye and Patrick Shea	
Part IV Summary and Recommendations By Ken Nye	

The bibliography which accompanies Part II in the present paper will undergo considerable revision before it appears as part of the larger study.

Part II

A.. Definitions

<u>Wine:</u>	The naturally fermented juice of grapes, fruit or rice.
<u>Domestic Wine:</u>	U.S. produced wine.
<u>Imported Wine:</u>	Various approaches to recording the quantity and value of wine imports are presented in Table II-23. In 1975, five European countries (Italy, France, Germany, Portugal and Spain) accounted for 60% of the world's wine production, 65% of the world's wine export trade and over 90% of all U.S. wine imports.
<u>Still Wine:</u>	Non-effervescent wine including dessert and table wines.
<u>Other Special Natural Wines:</u>	Wine made of fruit other than grapes or fruit and grape blends, containing no added alcohol or other spirits.

There are four major types of wine:

1. Table Wine - having an alcoholic content not in excess of 14% by volume. Imported sake (rice) wine is classified as table wine as is certain U.S. produced and imported "other special natural" wines known to contain not over 14% alcohol by volume (examples are imported Japanese plum wine and Spanish sangria).
 2. Dessert Wine - having an alcoholic content not in excess of 24% by volume but in excess of 14% by volume. Note that although many of the dessert wines (including madeira, muscatel, port, etc.) tend to be sweeter than most table wines - the fundamental distinction is made in terms of alcohol content - not sweetness. Certain U.S. produced and imported "other special natural" wines are placed in this category.
 3. Sparkling Wines and Champagne (Effervescent) - includes wines made effervescent by natural fermentation in a closed container (sparkling), by secondary fermentation in a bottle or closed container of not more than one gallon capacity (champagne) or by simply charging a still wine with carbon dioxide to the desired pressure (carbonated wine).
 4. Vermouth - aperitif wine having an alcoholic content of not less than 15% by volume, compounded from grape wine, containing added brandy or alcohol and flavored with herbs and other natural aromatic flavoring materials.
- B. Presentation and Interpretation of Data

Most of the presentation in Part II will be in the form of tables.

Greatest attention is focused upon table wines because of the prominent role they have come to play in the industry. In 1960 only 30% of all wine consumed in the U.S. was table wine. By 1970 this percentage had grown to 50 and by 1980 it is expected that 80% of U.S. wine consumption will be of this type.

Imported table wine data is provided in considerable detail. As Tables II-32 and II-33 indicate, imports are the fastest growing component of wine marketed in Michigan.

Accounting procedures used by those monitoring the flow of wine into or between federal, state or metropolitan boundaries differ so care is required when interpreting data. Generally it can be said that the tables in this section are more useful for showing trends and relationships between regional, state and metropolitan markets than they are for indicating precise levels of consumption during a given calendar or fiscal year.

The East North Central census region (Michigan, Ohio, Indiana, Illinois, and Wisconsin) corresponds well to the marketing region for Michigan wines. Comparisons between the 9 U.S. census regions (see map II - 1) are used to show how this market "measures up" relative to other areas in the United States.

C. National and Regional Consumption and Imports

1976 has been a record setting year for U.S. consumption of both table wines (setting a new high) and dessert wines (attaining the lowest level in the twenty years for which we have comparable data). A summary of 1975 - 1976 domestic and imported wine activity is presented in Tables II-1 and II-2.

Table II-3 to II-6 are intended to demonstrate table wine consumption, population and income trends by regions. Perhaps the most interesting observation to be had from Tables II-7 and II-8 is the relationship between still wine producing regions and their respective levels of table wine consumption.

Table II-9 charts consumer table wine preferences over time.

Table II-10 provides selected wholesale price indexes, wine consumption and expenditure indexes and an index of wine advertising expenditures. Note that imported table wine has increased less in price than domestic red table or dessert wines - explaining in part the table wine import boom. Increased transatlantic transportation cost, not included in the table, would serve to narrow import vs. domestic index differences. Note also that increases in the advertising expenditures index follow quite well the index of consumer expenditures on wine.

Table wine import data and data sources are furnished in Tables II-11 to II-23. Tables II-24 and II-25 display how average consumer prices for table wine might be arrived at using U.S. import statistics, a hypothetical state tax rate of \$.45 a gallon and alternative total markups of 100% and 125%.

Table II-26 gives 1975 population, case sales and per capita case sales in metropolitan areas located within the market for Michigan wines (see map II-2). Note that while these metro areas held 40% of the population of the entire East North Central Census region - they consumed 59% of the table wine, 56% of the dessert wine and 75.7 % of all champagne and sparkling wine.

Tables II-28 to II-30 compare Michigan, East North Central and national trends. Note that Michigan has gradually increased its consumption of dessert wine - counter to national and regional tendencies.

The explanation for this rise is to be found in Michigan law. Since 1937 all wines in Michigan over 16% in alcoholic content have been classified as hard liquor. Standard dessert wines (ranging from 17 to 20 per cent) have been subject to stricter state control, - particularly at the retail level. This has prompted wineries in Ohio, New York and California to create a class of "light" (15 to 16 per cent) dessert wines tailor made for the Michigan market.

Michigan wineries have had an even stronger inducement to produce wines not in excess of 16%. Only these wines can qualify for a reduction of the state excise tax from 50 cents to 4 cents per gallon provided they are made at least 75% of Michigan-grown grapes for which the winery has paid the grower at least \$100 a ton ^{1/} (originally \$55 a ton in 1937, then \$85 a ton in 1966).

Given shifting consumer preferences toward lighter wines - it is almost certain that without these restrictions placed on the sale of "heavy" dessert wine - Michigan would show total dessert wine consumption trends more in line with those observed regionally and nationally. The share of dessert wines in total wines marketed in Michigan has, despite the special provisions, dropped considerably.

Table II-31 shows that Michigan, 21st among states and Washington, D.C. in per capita wine consumption, maintains per capita consumption above the national average only in the "dessert" wine category.

Tables II-32 and II-33 emphasize the dramatic decline in Michigan wines sold in Michigan. We would have to extend the time horizon all the way back to the early post - prohibition years (1934 - 1938) to find a period when Michigan wineries entered less total gallonage into Michigan marketing channels than in 1976.

Michigan vinters decreasing share of the home market from 50% in 1964 to 8% in 1976 is thought to be due to:

1. A rapidly increasing demand for drier vinifera and French hybrid based table wines.
2. The availability of competitively priced, expertly promoted, domestic and imported wines to satisfy this demand.
3. The unfavorable image of Michigan wines held by Michigan consumers.
4. The lack of uniform standards by which the consumer can judge quality prior to the opening of the bottle.

Two legal issues to consider are:

1. The public pressure to raise the drinking age in Michigan from 18 to 20 with the objective of reducing alcohol abuse in the high school and on the highways.
2. In 1974 and 1976 attempts were made to pass a bill in the U.S. Congress requiring states to treat wines produced outside their boundaries the same for tax purposes as wines produced locally.

^{1/} See Section 16 A of the Michigan Liquor Control Act (1972)

If such a proposal became law - Michigan vinters would lose their 46¢ state excise tax advantage.

Despite past trends and current uncertainties we believe that the Michigan wine industry can compete favorably with out-of-state products - even without a state tax advantage.

The immediate marketing region for Michigan wines is the East North Central Region. Table II-7 reveals that this area has the largest population and greatest amount of personal income of all the nine U.S. census regions. Per capita comsumption rates remain low relative to the rest of the country - indicating great potential for market development.

The key to sharing in this expansion appears to lie in the improvement of the varietal base of the states' vineyards. Faced with similar conditions to those found in Michigan, the Wine Council of Ontario reported in a January, 1976 publication that it had "made a three year commitment in co-operation with the Federal Department of Agriculture and the Grape Grower's Marketing Board to undertake viticultural research to improve the quality of the grapes grown in Ontario. The total project is funded at \$170,000, of which the Wine Council of Ontario's share will be \$75,000". 1/

The Ontario Ministry of Agriculture and Food has initiated a program of long-term support to grape growers. "This commitment calls for a schedule of replanting to improve the industry as a whole. Guaranteed bank loans will enable those growers who have the land and climate, the know-how and desire to switch from labrusca grapes to the French hybrids now in demand." 2/

As Leon D. Adams, founder of the Wine Institute in California, wrote in The Wines of America:

"The fruit belt of Michigan is as capable, climatically speaking, of producing fine wines as most of the other viticultural districts east of the Rockies, including even the justly famous Finger Lakes region of New York. But until very recently, the Michigan wineries never tried".

SUMMARY OF MICHIGAN, U.S. REGIONAL AND UNITED STATES POPULATION, TABLE WINE CONSUMPTION AND STILL WINE PRODUCTION

	New England	Middle Atlantic	East North Central	West North Central	South Atlantic	East South Central	West South Central	Mountain	Pacific	U.S.	Michigan
Legal Age Pop. (000's) ^{1/}	8,525	25,598	26,307	10,980	22,170	8,757	13,773	5,981	18,108	140,199	6,145
Wtd.(by state pop.) legal age for wine consumption.	18	18.9	19.9	19.5	19.6	19.5	18.7	20.0	20.9	19.5	18
Legal age pop. as % of total U.S. legal age population.	6.1	18.3	18.8	7.8	15.8	6.2	9.8	4.3	12.9	100	4.4
Table wine consumption (000's cases) ^{1/}	4,896	14,683	12,208	3,055	11,551	2,146	4,513	4,226	25,903	83,180	3,177
Legal age per capita consumption of table wine.	.57	.57	.46	.28	.52	.25	.33	.71	1.43	.59	.52
21 yrs. and over per capita consumption of table wine. ^{2/}	.63	.60	.49	.29	.54	.26	.35	.73	1.44	.62	.57
Gen. pop. per capita consumption of table wine. ^{1/}	.40	.39	.30	.18	.34	.16	.22	.44	.92	.39	.35
Stocks of table wine - June 30 (000's gallons) ^{1/}	84.3	16,851.7	3,564.3	304.4	1,115.5	-	610.7	3.3	229,281.3	251,815.3	1,230.8
(Above) as % of total U.S. stocks of table wine - June 30.	.03	6.69	1.41	.12	.44	-	.24	-	91.05	99.98	.49
Production of still wines fiscal year (000's gallons). ^{1/}	30.2	37,864.5	9,784.0	477.2	5,170.7	-	745.8	1.7	369,015.2	423,069.1	1,377.9
(Above) as % of total U.S. production of still wines.	.01	8.95	2.31	.11	1.22	-	.18	-	87.22	100	.33

^{1/} Obtained through a recombination of data found in "The Wine Marketing Handbook 1976". All figures are estimates. Still wine means non-effervescent wine. The production figures for still wine exclude approximately 359 million gallons of distilling materials.

^{2/} Population data from "Population Estimates and Projections" No. 646, February 1977, Bureau of the Census, pages 3-4.

TABLE II - 8
 1975 POPULATION, INCOME AND TABLE WINE
 PRODUCTION AND CONSUMPTION RANKING
 BY U.S. CENSUS REGION.^{1/}

	Still Wine Production	Popu-lation ^{2/}	Table Wine Consumption	Personal Income	Per Capita Personal Income	Per Capita Consumption of Table Wines
Pacific	1	4	1	3	1	1
Middle Atlantic	2	2	2	2	2	4
East North Central	3	1	3	1	3	6
South Atlantic	4	3	4	4	6	5
New England	7	8	5	7	4	3
West South Central	5	5	6	5	8	7
Mountain	8	9	7	9	7	2
West North Central	6	6	8	6	5	8
East South Central	9	7	9	8	9	9

^{1/} Ranking derived from figures found in Table II - 6; 1 = greatest, 9 = least

^{2/} Population ranking is same if legal age, 21 years and over or general population figures are used.

DEFINITIONS

- 1/ Imports for Consumption equals entries for immediate consumption plus withdrawals from U.S. Customs Bonded Warehouses for Consumption.
- 2/ General Imports equals entries for immediate consumption plus entries into U.S. Customs Bonded Warehouses.
- 3/ Customs Value: In the case of wine this valuation (used for the collection of U.S. import duties) is very close to (within two or three cents per gallon) the F.A.S. value.
- 4/ F.A.S. Value: Transaction value (actual selling price) of wine at the foreign port of exportation including all charges incurred in placing the wine alongside the carrier.
- 5/ C.I.F. Value: Value of imports at the first port of entry into the United States.
- 6/ Import Charges: C.I.F. value minus F.A.S. value representing the aggregate cost of all freight, insurance and other charges incurred in shipping the wine from the foreign to the U.S. port.

* Unless otherwise specified all tables in this report refer to Imports For Consumption, Commodity by Country of Origin and U.S. Customs Value.
