Risks and farmers' investment in productive assets in Nigeria

Hiroyuki Takeshima¹, Futoshi Yamauchi² ¹International Food Policy Research Institute (IFPRI) (<u>H.takeshima@cgiar.org</u>)

*This policy note is based on the journal article: Takeshima, H. and F. Yamauchi. 2012. Risks and farmers' investment in productive assets in Nigeria. Agricultural Economics 43(2): 143-153. http://dx.doi.org/10.1111/j.1574-0862.2011.00572.x

RESEARCH INSTITUTE

ustainable solutions for ending hunger and poverty

INTERNATIONAL FOOD POLICY

Supported by the CGIAR

Two stage least squares

1. Background issue

- Significant role of **informal insurance** in rural sub-Saharan Africa <= high cost of formal insurance (Hazell 1992), lack of ex-post risk mitigation policy (Yamauchi et al. 2009)
- Different options for informal insurance

Traditional cropping system (Mixed cropping etc) Consumption smoothing Remittances	Investment into productive assets • Land • Livestock	Investment into productive assets • irrigation pump • milling machine
Risk reduction – great But also low return	High return, but limited risk reduction due to tenure insecurity, livestock disease etc	High return, and significant risk reduction - Dual roles

Productive assets like irrigation pump, milling machine may play dual roles

Irrigation pump

Drought or poorly distributed rains Reduce risk

 $c_{kt}, q_{kt}, x_{kt} \ge 0$ for all $k = 1 ... K; t = 0, ..., \infty$,

Yield increase

Value of product

Raise productivity

In an environment with low productivity and higher rainfall risks, the capital injection increases the likelihood of irrigation pump investments

Our hypotheses

• In an environment with low productivity and higher risks to the price of gari, the capital injection increases the likelihood of milling machine investments

Some of the materials in the article have been reproduced in this poster with permission from the John Wiley & Sons Inc. 2. Descriptive statistics

We use dataset collected for the evaluation of the Second National Fadama Development Project (Fadama II) in Nigeria. Detail descriptions of the dataset are in Nkonya et al. (2008).

		% who invested in 2006	
	Total	Milling	Irrigation
		machine	pump
Total	3758	3.2	6.9
Fadama II member	1281	6.7	16.5
Fadama II neighbor	1224	0.0	1.6
Non-Fadama II LGA	1253	2.3	2.4
Male	2629	2.1	8.3
Female	1124	5.1	3.8
Owner of milling machine before 2006	167	5.4	
Owner of irrigation pump before 2006	257		26.8
		Milling	Irrigation
	A 11	machine	pump
	All	investors	investors
		in 2006	in 2006
Household size		9 9	10
Age		42 45	45
Years of education		6 6	6
Monthly household expenditure in 2005 (US	S\$) 2	39 383	234
Total value of assets in 2005 (US\$)	15	75 1575	2472
Distance to nearest town in 2005 (km)		4 4	4
Distance to nearest all-weather road in 2005	(km)	3 4	2

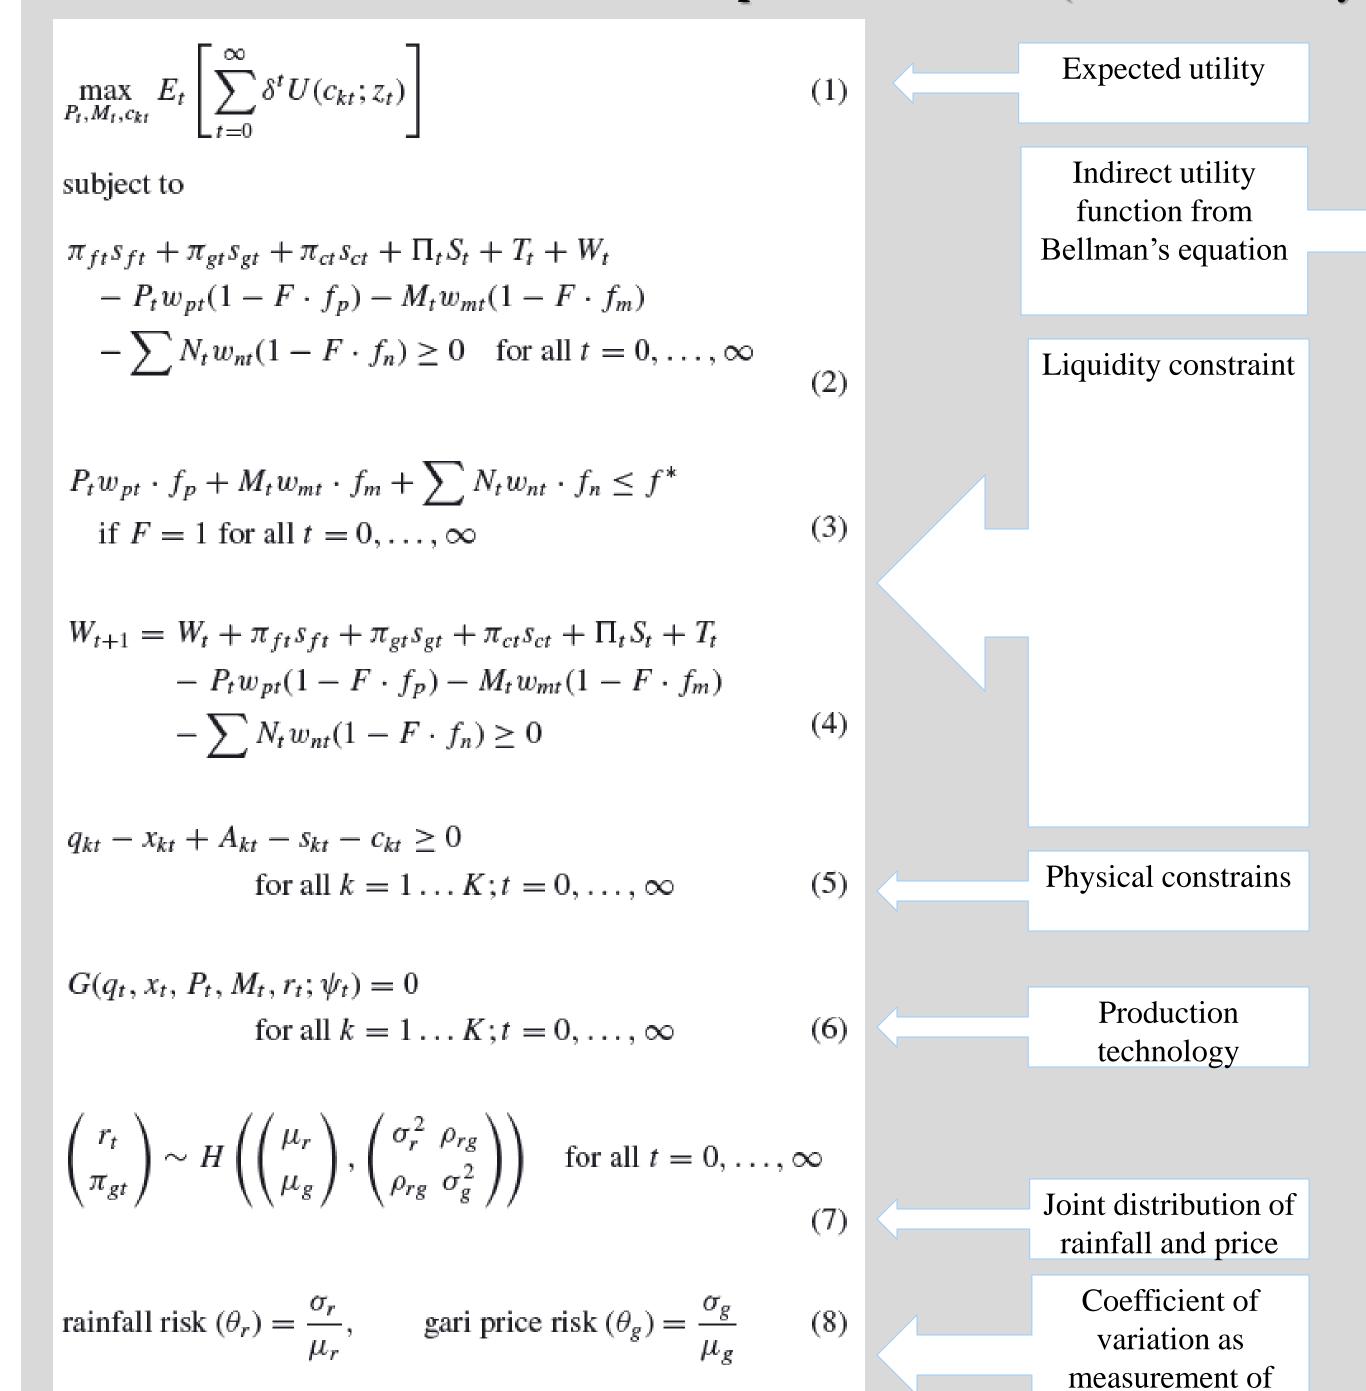

3. Conceptual framework (Definitions of symbols are in the paper)

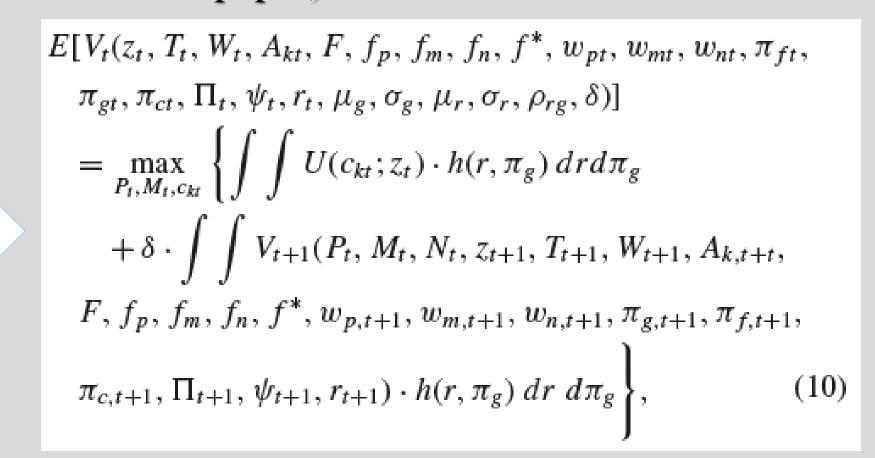

risk

Milling machine

Value of product

Crop price fluctuations

$$\partial \{E[V_t | P_t = 1, F = 1)] - E[V_t | P_t = 0,$$

 $F = 1)]\}/\partial \theta_r > 0 \text{ and}$ (13)

$$\partial \{E[V_t \mid M_t = 1, F = 1)\} - E[V_t \mid M_t = 0, F = 1)\} / \partial \theta_g > 0.$$
(14)

Empirical hypotheses

- $\partial [\text{Probability}(M_t = 1 \mid F = 1)]/\partial \theta_g > 0$
- Probability of investment into milling machine at $t (M_t)$ = 1) under external capital injection (F = 1) increases as price risk of un-milled products (θ_a) increases
- $\partial [\text{Probability}(P_t = 1 \mid F = 1)]/\partial \theta_r > 0$
- Probability of investment into milling machine at t (M_t = 1) under external capital injection (F = 1) increases as price risk of un-milled products (θ_o) increases

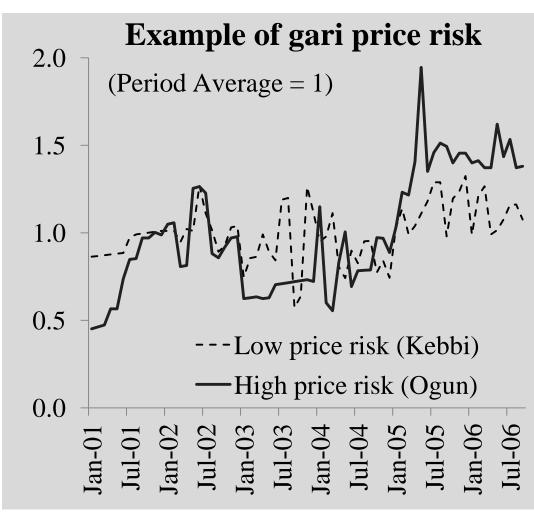

Empirical method

• Instrumental variable Diff-in-Diff

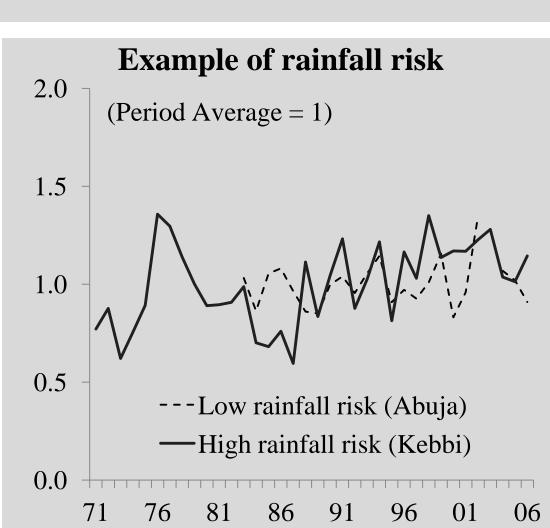

Stratified PSM

- Stratification of states based on risk levels
- PSM for each strata

<= combining the matching based on covariates and propensity score can significantly reduce the bias (Dehejia & Wahba 1999; Stuart & Rubin

Source: NIMET (2009)

Stratified Propensity Score Matching

	Reference	Rainfall risk		White gari monthly price (Jan 01 – Sep 05)	
	city	Coefficient of variation	Group	Coefficient of variation	Group
Adamawa	Yola	0.333	High	0.205	Low
Bauchi	Bauchi	0.166	Medium	0.213	Low
Gombe	Bauchi	0.166	Medium	0.234	Low
Imo	Owerri	0.128	Low	0.241	Low
Kaduna	Kaduna	0.120	Low	0.257	High
Kebbi	Sokoto	0.209	High	0.240	Low
FCT	Abuja	0.095	Low	0.260	High
Lagos	Ikeja	0.165	Medium	0.259	High
Niger	Minna	0.140	Low	0.284	High
Ogun	Ijebu Ode	0.150	Medium	0.323	High
Oyo	Ibadan	0.201	High	0.297	High
Taraba	Yola	0.333	High	0.227	Low

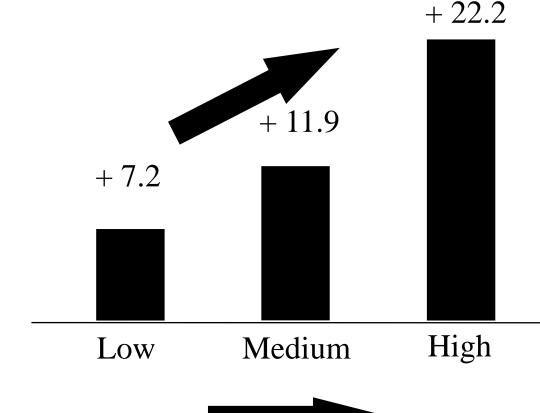

Source: Oyekale (2009) for rainfall in Adamawa and Taraba, NBS (2007) and NIMET (2009) for others.

risk areas

areas

Low

More demand for irrigation pump in higher rainfall risk areas

Higher rainfall risk

Fadama II increased probability of investment in irrigation pump by

- 22.2 percentage points in high rainfall risk
- 11.9 percentage points in medium risk areas • 7.2 percentage points in low rainfall risk

• 5.0 percentage points in low price risk

• 8.3 percentage points in high price risk

Fadama II increased probability of

investment in milling machine by

Higher gari price risk

More demand for milling machines in

higher gari (unmilled cassava) price

4. Empirical results and policy implications

	Milling machine		Irrigation pump

Instrumental variables

Eligibility

Eligibility × household size Eligibility × age of respondent Eligibility × rainfall risk × household size Eligibility \times rainfall risk \times age

Eligibility × rainfall risk × education Eligibility × price risk × household size Eligibility \times price risk \times age Eligibility \times price risk \times education

2SLS also supports results in stratified PSM

- External financial project (Fadama II project) → Probability of investment ↑
- Rainfall risk ↑ → Impact of Fadama II on irrigation pump investment ↑
- Price risk ↑ → Impact of Fadama II on milling machine investment ↑

Conclusions

- Some productive assets play dual roles, raising productivity, and mitigating the risks
- Irrigation pump and milling machines can both raise productivity of land and labor, and reduce the impacts of weather and market related risks
- Impact of financial capital injection should be evaluated not only on the income growth, but the benefit from reduced exposure to risks
 - Financial support for productive asset investments should be evaluated not only on productivity growth but also reduced exposures to risks by beneficiary famrers
