Twenty-third Annual Report of the Farm Management Service of Dakota, Dodge, Freeborn, Goodhue, Le Sueur, Mower, Nicollet, Olmsted, Rice, Scott, Steele, Wabasha, Waseca, and Winona Counties for the year 1950

Prepared by T. R. Nodland, G. A. Pond and J. A. Tyvand

#### INTRODUCTION

Extension of the University of Minnesota, the Bureau of Agricultural Economics of the United States Department of Agriculture, and the county extension services of Dodge, Freeborn, Goodhue, Rice, Steele, and Waseca counties organized late in 1927 the Farm Management Service Project, to operate in the above named counties, beginning January 1, 1928. Additional counties have since been added. This famm management service is offered to farmers who desire to keep farm records, and to have these records summarized and analyzed in connection with those of other farmers. Each farmer who cooperates in this service pays an annual fee which covers a part of the cost. The balance of the cost is defrayed by the University of Minnesota and the United States Department of Agriculture.

General administration of this project, analysis of the records and preparation of the reports is handled by the Division of Agricultural Economics
under the direction of G. A. Pond and T. R. Nodland. Extension work in connection with the project is handled by S. B. Cleland and J. B. McNulty of the
Agricultural Extension Division. Harvey Bjerke was the field agent for this project. At the end of the year, W. E. McDaniel and Neils Rorholm of the Division
of Agricultural Economics aided in closing the records. County agricultural
extension agents who cooperate in this project include C. O.Quie, V. Sander,
R. E. Jacobs, G. J. Kunau, Russell Miller, F. L. Liebenstein, F. E. Wetherill,
Ray Aune, Warren Liebenstein, Ed Slettom, Chester Graham, J. R. Gute, Herbert
Feldman, C. F. Murphy, and Norman Mindrum.

The Southeast Minnesota Farm Management Association was organized in 1939 by the farmers cooperating in the S. E. Farm Management Service. This association now represents its membership as an additional cooperating agency to determine policies and especially to maintain the field organization and membership. Officers for 1950 were:

President: R. L. Zimmerman, Racine, Mower County Vice President: Sidney Frost, Pine Island, Olmsted County Secretary-Treasurer: George Williamson, Shakopee, Scott County

The board of directors included these officers and also the following:
Sarah Holland, Dakota County; Harry Morton, Dodge County; Ephraim Magnuson,
Freeborn County; Cameron Hayward, Goodhue County; Otto Kajer, Le Sueur County;
Sidney Johnson, Micollet County; Fremont Albers, Rice County; Herman Krueger, Scott
County; Fritz Sprenger, Wabasha County; Alfred Trahms, Waseca County; and
Norman Luehman, Winona County.

The following tabulation shows by counties the number of records submitted in 1950:

Dakota	g	${\tt Mower}$	8	Steele	15
Dodge	13	Nicollet	13	Wabasha	12
Freebo rn	19	${\tt Olmsted}$	14	Waseca	117
Goodhue	22	Rice	11	Winona	10
LeSueur	5	Scott	5	Total	172

The table on page 4 and succeeding pages show 165 farms. Seven farms have been omitted from all the averages in the tables because they differed so widely in type from the others or the records were not sufficiently complete for a full analysis.

Because the farmers included in this study are, in general, above the average in managerial ability and operate larger and more productive farms, they have returns materially higher then the average for this section of the state. There were, nevertheless, wide variations in the methods and practices followed by these men. It is reasonable to assume that similar variations occur among all farmers in the area. To the extent that this is true, this report should be of value to all farmers and to others interested in agriculture in that it illustrates how farm records may be used as a basis for making an analysis of a farm business and for improving the management of a farm.

Weather conditions were unfavorable for farm work and growth of vegetation in April and early May. The spring of 1950, as a whole, was decidedly cooler than usual. Dry weather during the first half of June was favorable for planting and cultivation but moisture was needed for meadows and pastures. July was considerably cooler and wetter than usual. Pasture conditions were below normal and the small grains were short. August was cool and dry and was unfavorable for corn and soybeans. Frost on August 20 killed some corn and soybeans in low places. Conditions were favorable for haying and for maturing late crops. Conditions were ideal in October for drying corn and soybeans. Killing frosts occurred on October 4.

#### CUMULATIVE EFFECT OF EXCELLING IN A MULBER OF MANAGEMENT FACTORS

Studies of earnings of farmers in this area show that there are seven major management factors causing variations in earnings among farmers within a given year. These seven factors are (1) crop yields, (2) choice of crops, (3) returns from livestock, (4) amount of livestock, (5) size of business, (6) work accomplishment per worker, and (7) control over expenses. The combined or cumulative influence of these seven management factors on earnings is shown in Table 9. The farmer's earnings are determined to a considerable extent by his accomplishments in these seven factors.

Table 9. Relation of Operator's Labor Earnings to the Number of Factors in which the Farmer Excels

No. of factors in which farmer excels	No of farms	Your ·	The length of the shaded lines is in proportion to the average operator's labor earnings	Average operator's labor earnings
None, lor 2	49		XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	\$4279
3 or 4 .	84	· · · · · · · · · · · · · · · · · · ·	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	5 <sup>1</sup> 123
5, 6, or 7	32		XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	6542

The array in Table 9 indicates that it will be worth while for each cooperator to study carefully his ranking on pages 10 and 11, and learn his standing in respect to each of the above factors and the elements of strength and weakness in his farm business.

Table 10. Measures of Farm Organization and Mar	agement E	fficiency,	1950
	Average of 165 farms	33 most profit- able farms	33 least profit- able farms

<sup>\*</sup>Given as a percentage of the average

\*\*Crops are marked on page 12 as (A), (B), (C), and (D). All of the acres in

(A) crops, one-half of acres in (B) crops, and one-fourth of acres in (C) crops

are used in calculating per cent of tillable land in high return crops.

\*\*\*An index weighted by the animal units of livestock.

<sup>\*\*\*\*</sup>Acres in timber not pastured, roads, waste, and farmstead were not included.

#### Thermometer Chart

Using your figures from page 10, locate your standing with respect to the various measures of farm organization and management efficiency. The averages for the 165 farms included in this summary are located between the dotted lines across the center of this page.

#### TOTAL RETURNS AND FEED COST FROM YOUR LIVESTOCK ENTERPRISES

The total "return over feed costs" for each class of livestock is shown in Table 16. This differs from the "return over feed" shown in the enterprise statement in that it is the total for each class of livestock instead of a return "per head" "per unit" or "per 100 pounds". These data indicate the relative importance of different classes of livestock as a source of income and as a market for feed. The total return is the same as the returns and net increases shown on page 5. The return over feed is not a net return, but rather the amount available from the gross income, after paying the feed bill, to cover the outlay for hired labor, power, equipment, taxes, insurance, interest, and veterinary bills and to provide a return for the use of family labor and capital.

Feed is the largest single item of cost for all classes of livestock. However, the proportion of the total cost represented by feed varies considerably between classes of livestock. Feed makes up approximately 45 per cent of the total costs of maintaining dairy cattle and noultry, 50 per cent in the case of a farm flock of sheep and 75 to 90 per cent for hogs, feeder cattle and feeder lambs. Consequently, it is necessary to secure a relatively higher return over feed from dairy cattle and poultry than from the other livestock enterprises in order to be able to cover all the cost other than feed.

#### EXPLANATION OF "VORK UNITS"

The total "work units" for my one farm is a measure of the size of that farm business. A work unit as used in this report is the average accomplishment of a farm worker, in a ten hour day, working on crops and productive livestock at average efficiency or ten hours of work off the farm for pay. The number of work units for each class of livestock and each acre of crop are presented in Table 30.

Table 30. Number of Work Unit	s for Each Class of	Livestock and Each	Acre of Crop
	No. of		No. of
Item	work units	Item	work units
Dairy and dual pur. cows	14.0 per cow	Small grain	.7 per acre
Other dairy & du.par. cattle	4.0 per an. unit*	Sugar beets	3.0 per acre
Beef breeding herd	4.0 per an. unit*	Sweet com	2.3 per acre
Feeder cattle	•35 per 100 lbs.	Corn husked	1.1 per acre
Sheep - farm flock	1.8 per an. unit*	Corn, hogged	•7 per acre
Sheep - feeders	.4 per 100 lbs.	Corn, shredded	2.2 per acre
Hogs	•3 per 100 lbs•	Corn, silage	1.7 per acre
Turkeys	.7 per 100 lbs.	Corn fodder	1.0 per acre
Hens	22.0 per 100 hens	Alfalfa hay	•9 per acre
Canning peas	2.0 per acre	Soybean hay	1.4 per acre
Soybeans for grain	.7 per acre		
*Animal unit represents one co	w, one bull, one fe	eder steer or heife	r, two head

\*Animal unit represents one cow, one bull, one feeder steer or heifer, two head of other cattle, seven head of sheep, fourteen lambs, five hogs, ten pigs, 100 hens or 1400 pounds of turkeys produced.

Footnote for pages 25, 26, and 27

The values of farm real estate in 1931 were reduced approximately 25 per cent from 1925-1930 values. The values in 1932 were reduced about 29 per cent from the 1931 values. Only land was affected by the reduction in 1931, but in 1932 buildings and improvements were cut 25 per cent. In 1936 the values of land were adjusted upward 10 per cent. The value of dairy cows was also adjusted downward in 1932 and upward in 1936. These capital lesses were not included in the inventory decreased in the financial statement but the changes in valuetion resulted in variations in the interest charge. No changes in the basis of inventory valuations were made in the years 1933 to 1935 and 1937 to 1950.

The charges for unpaid family labor and board for hired labor were also changed from year to year. The rates used for the period 1928 to 1950 were as follows:

Year	Unpaid fauily labor	Board for hired labor	Yoar	Unpaid family labor	Board for hired labor
1928 1929 1930 1931 1932 1933 1934 1935 1936 1937	\$60 60 60 40 30 30 30 43 45 45	\$20 20 20 15 10 10 10 15 16 18	1939 1940 1941 1942 1943 1944 1945 1946 1946 1949 1950	\$45 45 50 60 75 85 90 100 125 125 125	\$18 <b>20</b> 25 25 25 25 25 36 36 36

Several changes were made in the 1940 records. The value of the house which had previously been emitted form the farm business was included and a rental charge equal to 10 per cent of the average value of the house was included with the farm perquisites. The standards used in the calculation of work units were changed in accordance with the new information made available. This latter change also affected the work units per worker and the factor of expense per work unit. The acres in protected woodlots, roads, waste and farmstead were emitted from the acreage used in the calculation of amount of livestock per 100 acres. Several new livestock statements were added. Cattle were classified into two groups: "specialized dairy cattle" and "dual purpose cattle". Statements for beef breeding cattle, feeder cattle and feeder sheep were also included.

The crop ratings used in calculating the percentage of the tillable land in high return crops were changed considerably in 1944.

These adjustments should be considered in comparing 1950 results with previous years.
