COUNTY GOVERNMENT FINANCES IN MINNESOTA: AN OVERVIEW

by

Arley D. Waldo

and
Minnesota Extension Service
University of Minnesota
St. Paul, MN 55108

County governments provide a broad range of services to their residents -- extending from law enforcement, highways, and social services to parks, recreation, and libraries. In many instances, county governments act essentially as administrative agents for state government, carrying out state policies and programs over which they have little control. The responsibility of counties for the day-to-day administration of income maintenance and social service programs, in which benefits and services are determined largely by the state and federal governments, is a prominent example. Counties also provide essential statewide services with respect to the state's judicial system, property tax administration, the recording of legal documents, etc.

County Expenditure

The total expenditure of Minnesota's 87 county governments exceeded \$2.3 billion in 1988.¹ County spending on a statewide basis averaged \$543 per person. Direct spending by county governments represents about 16 percent of the combined total expenditure of state and local governments in Minnesota and 24 percent of the total spending of all local units of government.²

Nearly half (46 percent) of all county spending in 1988 -- \$251 per person -- was for human services programs (Table 1 and Figure 1). These programs include income maintenance programs such as Aid to Families with Dependent Children (AFDC), general assistance, supplemental assistance, the county share of medical assistance costs, and a

¹ Unless otherwise indicated, all data on county finances are from reports compiled by the Minnesota Office of the State Auditor. See Appendix.

variety of social services. The other major expenditure categories were highways (17 percent), public safety (11 percent), and general governmental administration (13 percent). These three categories, together with human services programs, accounted for 88 percent of all county government expenditure in 1988.³

Human Services

County government outlays for human service programs totaled almost \$1.1 billion in 1988. About half of this amount was for income maintenance programs that provide direct financial assistance to needy persons and families (Table 2). Expenditures for social

Table 2. Total County Human Services Expenditure by Function, Minnesota, 1988

Other Welfare Costs	245,345,105	22.7
Total	1,079,961,416	100.0
Source: Minnesota Office of the State Auditor.		

services accounted for 27 percent of the total and other costs associated with welfare programs of all types represented 23 percent. Per capita outlays for human services were \$124 for income maintenance programs, \$70 for social services, and \$57 for all other welfare costs (Figure 2).

Income maintenance expenditures were \$535 million in 1988 (Table 3). AFDC programs made up nearly two-thirds of the total. General assistance and the county share of medical assistance costs each accounted for about 15 percent of the total. Supplemental assistance to those qualifying for the federal Supplemental Security Income program for the blind, disabled, and elderly accounted for 6 percent. County income maintenance expenditures averaged \$124 per resident in 1988 (Figure 3). AFDC costs alone were \$80 per capita.

³ A detailed accounting of county government expenditures is given in the Appendix. See Table A-2.

Figure 2. Per Capita Human Services Expenditure, 1988 (\$251)

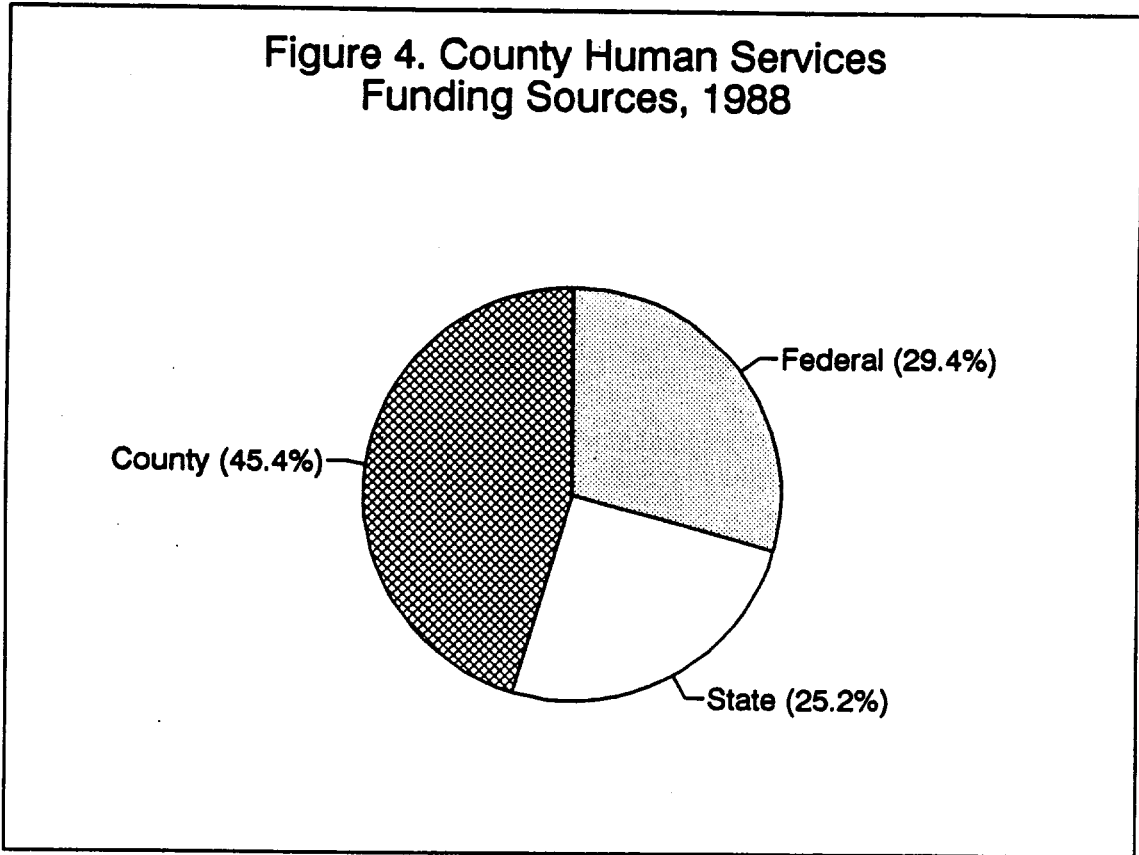

**Figure 3. Per Capita Income
Maintenance Expenditure, 1988 (\$124)**

County governments function as administrative agents of the federal and state government in administering many income maintenance and social service programs. Federal and state grants for welfare programs paid for about 55 percent of county spending for human service programs in 1988, revenue from county sources (largely property taxes) for 45 percent (Figure 4). On a statewide basis, the total amount of revenue available to county governments from their own revenue sources and unrestricted state aids was a little more than \$1.4 billion.⁴ About one-third of this amount (34.3 percent) went to pay county governments' share of the cost of human service programs.

⁴ This includes \$843.6 million from local property taxes, \$378.7 million from nontax county revenue sources, \$193.3 million from state property tax credit aid, and \$15.5 million from the state Local Government Aid (LGA) program.

Figure 4. County Human Services Funding Sources, 1988

Highways

After human service programs, highway expenditure is the second largest category of county government spending. County expenditure for highways totaled about \$401 million in 1988 (Table 4). Nearly half of this amount was capital outlay for county highway systems; highway maintenance, operation, and administration accounted for the remainder. Per capita county highway expenditures are shown in Figure 5.

Table 4. Total County Highway Expenditure by Function, Minnesota, 1988

Item	Total Expenditure (Dollars)	Percent of Total

Operation and Maintenance	176,788,349	44.1
Capital Outlay	196,127,843	48.9
Total	400,876,373	100.0

Source: Minnesota Office of the State Auditor.

Figure 5. Per Capita Highway Expenditure, 1988 (\$93)

Public Safety

County outlays for public safety -- county sheriff departments, correctional facilities, etc. -- amounted to \$267 million in 1988 (Table 5). Correctional facilities and services accounted for almost two-fifths of the total. Per capita expenditures for public safety are shown in Figure 6.

Table 5. Total County Public Safety Expenditure by Function, Minnesota, 1988

Figure 6. Per Capita Public Safety Expenditure, 1988 (\$74)

County Revenue

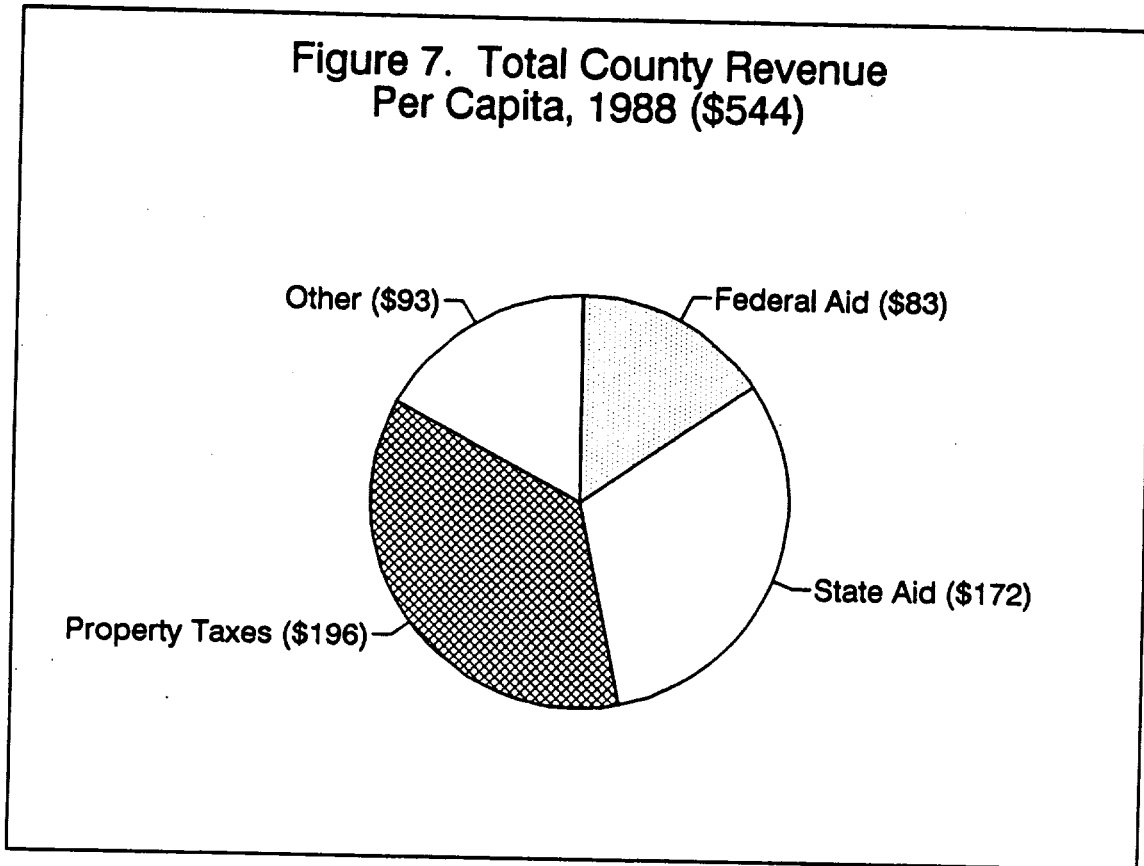

The revenue of county governments totaled a little over \$2.3 billion in 1988 (Table 6). Counties rely heavily on state and federal grants to finance the services they provide. Intergovernmental revenue from the state and federal governments accounted for close to half (48 percent) of total county revenue.⁵ County property taxes and other, nontax county revenues represented 53 percent of total county revenue in 1988.⁶ The major sources of county revenue are shown on a per capita basis in Figure 7.

Table 6. Total County Government Revenue by Source, Minnesota, 1988		
Item	Total Revenue (Dollars)	Percent of Total
Intergovernmental Revenue:		
From Federal Government	356,796,759	15.2
From State Government	738,909,289	31.6
From Local Governments	22,769,533	1.0
Own-Source Revenue:		
Property Taxes	843,596,931	36.0
Charges and Miscellaneous	378,654,313	16.2
Total Revenue	2,340,726,825	100.0
Source: Minnesota Office of the State Auditor.		

⁵ Counties also receive a small amount of intergovernmental revenue from other units of local governments in payment for services performed for those governmental units.

⁶ A detailed accounting of county government revenues is given in the appendix. See Table A-1.

**Figure 7. Total County Revenue
Per Capita, 1988 (\$544)**

Federal Aid

County governments received nearly \$357 million in federal aid in 1988 (Table 7). Most of this amount -- 89 percent -- represented funding of the federal share on locally-administered public assistance programs. Counties received an average of \$74 per capita from the federal government for these programs (Figure 8).

Table 7. County Government Revenue from the Federal Government by Function, Minnesota, 1988

Item	Total Revenue (Dollars)	Percent of Total

Total	738,909,289	100.0

Source: Minnesota Office of the State Auditor.

Figure 9. Per Capita State Aid, 1988 (\$172)

of the total -- was for welfare programs. State aid for county highways and property tax credit aid each accounted for about one-fourth of the total amount of state aid paid to county governments. Property tax credit aid, which averaged \$45 per capita in 1988, represents the amount by which county property taxes were reduced as a result of property tax credits granted to homeowners and farmers.⁷

The Local Government Aid (LGA) program, which was begun for the purpose of providing unrestricted grants to general-purpose units of local government (counties, cities, and townships) accounted for only 2 percent of the revenue that counties received from the state in 1988. Nearly all LGA payments now go to cities.

Revenue from County Sources

The principal source of county-raised revenue is the property tax. The property tax is the only source of *tax revenue* available to county governments. Counties received nearly \$844 million in property tax revenue in 1988 (Table 9). Property taxes accounted for 69

Item	Total Revenue (Dollars)	Percent of Total

⁷ The homestead credit and the agricultural credit were the state's two major property tax credit programs, but eight other property tax credits were in effect for property taxes payable in 1988.

percent of all revenue raised by counties from local sources Charges for services accounted for 13 percent and interest earnings for 6.2 percent. On a per capita basis, counties received an average of \$196 per person from property taxes, \$36 from charges for services, \$18 from interest earnings, and \$34 from all other sources (Figure 10).

Expenditure Trends

Total Minnesota county government expenditure was about \$515 million in 1970.⁸ Total spending topped the one-billion dollar mark in 1978 and by 1988 stood at more than \$2.3 billion.

⁸ Total and per capita county government expenditures and revenues for 1970 through 1988 are included in the Appendix. Figures for major categories are given in both current and constant (1988) dollars.

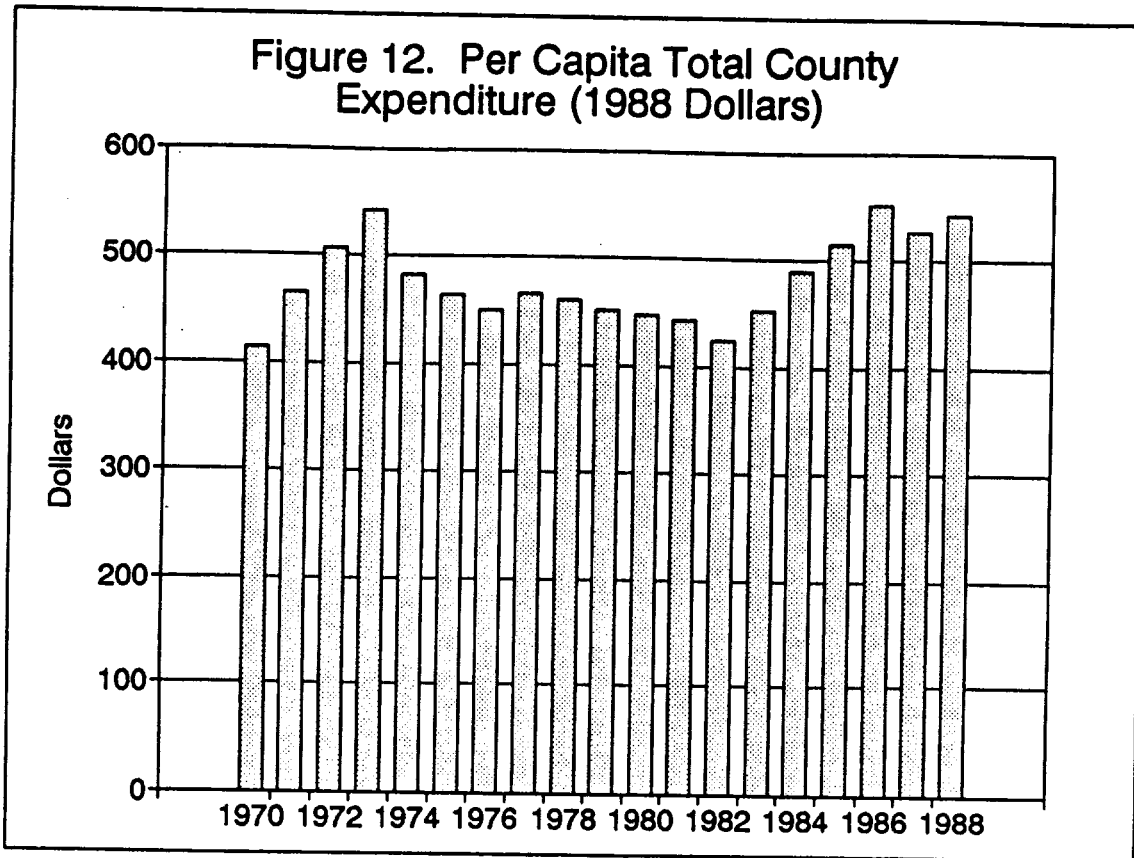

Total Expenditure

Figure 11 shows total county government expenditures for 1970 through 1988 in both current and constant (1988) dollars. Adjusted for inflation, total county spending remained virtually constant from 1974 through 1982. Since 1982, however, county expenditures in real terms have increased significantly. From 1982 to 1988, county outlays in real terms jumped by 28.9 percent.

Per Capita Total Expenditure

Figure 12 depicts total county expenditures in 1988 dollars on a per capita basis. Real county expenditure per person drifted downward from 1974 to 1982. Measured in 1988 dollars, per capita spending dropped to \$424 in 1982 -- the lowest level since 1970. From 1982 to 1988, real per capita expenditure increased by 28.2 percent, rising to \$543 per person.

In viewing these trends in county spending, two factors merit special mention. First, county government spending is heavily influenced by changes in outlays for public assistance and social service programs over which counties have little control. The drop in county spending after 1973 coincides with the federal takeover of adult categorical public assistance programs beginning January 1, 1974. Second, total county expenditure reported for 1986 is somewhat misleading because of the way in which Hennepin County reported certain financial transactions. This caused both revenues and expenditures for Hennepin County and for the state as a whole to be artificially inflated for that one year.

Per Capita Nonwelfare Expenditure

A different view of changes in county government spending over time is shown in Figure 13. This chart shows per capita total county expenditure excluding outlays for public assistance and other social services. The amounts are in constant (1988) dollars. The dip

in these expenditures at the end of the 1970s does not reflect a drop in county spending for purposes other than public welfare but, rather, the fact that per capita nonwelfare spending was increasing at less than the rate of inflation. Consumer prices increased 9.0 per cent in 1978, 13.3 percent in 1979, 12.5 percent in 1980, and 8.9 percent in 1981. Again, the artificial bulge in spending in 1986 should be ignored. In any case, however, the upward trend in nonwelfare county spending in recent years is evident.

Expenditure by Function

Trends in real per capita outlays for the four major categories of county government spending are shown in Figure 14. The most obvious trend is the increase in inflation-adjusted outlays for law enforcement, corrections, and other public safety services. It is also worth noting that real per capita expenditure for county highways has changed very little over time.

Revenue Trends

The total revenue of county governments increased from a little more than a half billion dollars in 1970 to over one billion in 1978. By 1988, county revenue exceeded \$2.3 billion.

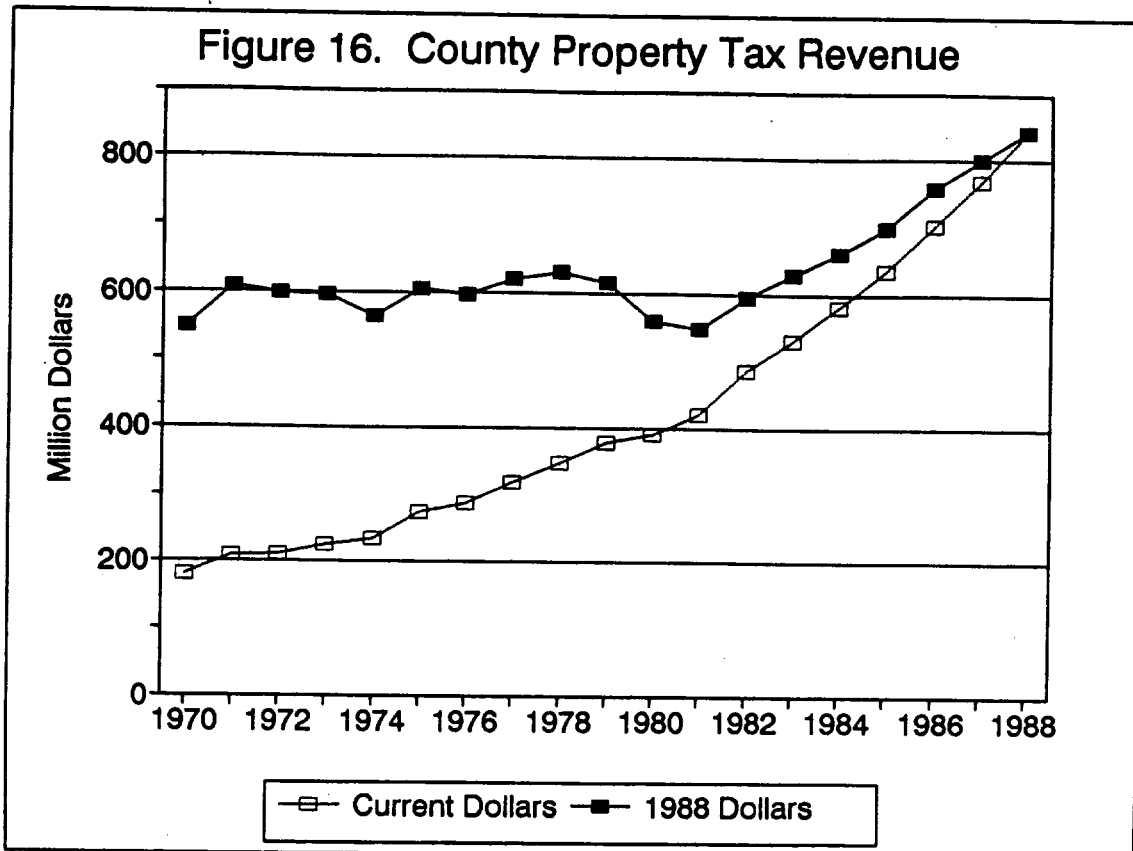

Revenue Sources

Figure 15 shows trends in total county revenue by major sources for the period from 1970 through 1988. The amounts shown are in current dollars and not adjusted for inflation. Most noticeable is the growing reliance of county governments on local, nontax sources of revenue. Increasingly, local governments across the country have turned to user charges and other nontax revenue sources. And in many states, local units have been given authority to impose local sales or income taxes to reduce their reliance on the property tax.

Property Taxes

Total county property tax collections are shown in both current and constant (1988) dollars in Figure 16. Not surprisingly, county property taxes have grown over time. But during the 1970s, property taxes were increasing at a rate no faster than inflation. Measured in 1988 dollars, total county property taxes hovered around the \$600 million level during most of the 1970s and dropped noticeably at the end of the decade as the state legislature pumped more state money into property tax relief measures. This ended when the state ran into severe budget problems in 1981-82.

Since 1981 total county property tax collections in constant 1988 dollars have climbed from \$546 million to nearly \$844 million -- an increase of well over 50 percent in seven years. Measured in 1988 dollars, per capita county property taxes went from \$133 per person in 1981 to \$196 per person in 1988 (Figure 17).

Sources

The information contained in this report is based on statistics published annually by the Minnesota Office of the State Auditor. Additional data are included in the Appendix.

APPENDIX

The county financial data included in this report are from summary reports issued annually by the Minnesota Office of the State Auditor and derived from audited financial statements submitted by county governments. This Appendix includes detailed information concerning county government revenues and expenditures for the fiscal year ended December 31, 1988. Summary data related to major revenue and expenditure categories are presented for the period from 1970 through 1988. Per capita figures were calculated based on population estimates from the Minnesota Office of the State Demographer. Constant dollar amounts were calculated using the U.S. consumer price index for all urban consumers (CPI-U).

The data that appear in Tables A-3 through A-10 are based, with one exception, on information that is published in the statistical appendix to the *1991 Economic Report to the Governor* (Table 56 and Table 57). The exception relates to county government revenue for 1983. The revenue figures for 1983 that appear in the *Economic Report* differ from those in the original report from the State Auditor's office. This report uses the figures as originally reported.

County governments operate on calendar-year fiscal periods. Time series data on county revenues and expenditures are subject to changes over time in accounting methods and reporting requirements.

The financial data reported here do not include revenues and expenditures associated with the operation of public service enterprises such as county hospitals; nursing homes; water, sewer, and sanitary systems; and similar enterprises.
