Trade in Selected Agricultural

Commodities, 1951-65

Beverage Crops: Coffee, Cocoa, and Tea

Food and Feed Grains: Wheat, Rice, Maize (Corn), Barley, and Other Cereals

Textile Fibers: Cotton, Jute, and Other Vegetable Fibers

Sugar, Fruits, and Vegetables

Oilseeds, Oil Nuts, and Animal and Vegetable Oils

PREFACE

This is one in a group of statistical studies on world agricultural trade, prepared as a part of the research project, "Analysis of Demand Prospects for Agricultural Products of the Less Developed Countries," being conducted by the Economic Research Service under a participating agency service agreement for the Agency for International Development.

These volumes present 1951-65 data on trade flows of selected agricultural commodities for 19 importing or exporting regions, showing regions of origin of imports and destination of exports. These data, not available in this form from other sources, are presented in tabular matrix form so that the volume of trade--exports and imports--among the 19 regions can readily be discerned. These statistical series include commodities which account for 80 percent of the agricultural exports and 33 percent of all exports of less developed countries and are believed to be the most comprehensive series available. These series should fill a part of the information gap in international trade and make possible a more comprehensive analysis of changes in the patterns of trade in agricultural products. Although there is some repetition of world trade information in the series, it is necessary because not all readers will want the entire group or series.

This volume on sugar, fruits, and vegetables is based on data from many different sources. It has been necessary to make estimates of trade flows based upon value data for some countries because of incomplete reporting. World exports of each commodity in any one year equal world imports.

This volume also includes tables for 1964 showing total world trade and total agricultural trade for 19 importing regions and regions of origin of imports. Conversely, they show trade flows for 19 exporting regions and destination of their exports. These data on agricultural trade are in a form not available from other sources. They provide a basis for observing the importance of sugar, fruits, and vegetable crops in total trade and in agricultural trade by countries and regions.

The research project on the demand prospects for agricultural exports of less developed countries is being conducted by ERS in three phases: (1) historical analysis of trade flows, (2) analysis of demand prospects, and (3) analysis of policy implications of estimated world demand prospects, under the joint supervision of an ERS Technical Advisory Committee by Arthur B. Mackie and Anthony S. Rojko. Special acknowledgements are given to James T. Bley and John J. Higgins, Jr. for their work in compiling trade data on vegetables and citrus fruits. Martin E. Abel, Deputy Assistant Secretary, International Affairs, was Chairman of this committee at the start of the project.

SUMMARY

World trade in sugar, fruits, and vegetables was valued at almost \$4.8 billion, or 12.4 percent of world agricultural trade in 1964. The value of world trade was \$4.6 billion or about 12 percent in 1965. The largest of these export crops was sugar, representing about \$2.6 billion, or 7 percent of world agricultural trade in 1964. The value of fresh fruits--the second largest--was \$1.5 billion; that of vegetable exports was \$0.534 billion, while that of dried fruits was \$0.160 billion.

The volume of world trade in sugar, fruits, and vegetables increased during 1951-65 at an average annual rate of 5.7 percent. Exports of other vegetables led--growing at 9.7 percent, while fruits increased 6.6 percent per year. World trade in sugar increased only 3.1 percent per year during the period.

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods needed for economic development. In 1965, 34 countries depended upon exports of sugar, fruits, and vegetable crops for more than 20 percent of their export earnings. Ten countries depended upon these commodities for more than 50 percent of their export earnings. There were 11 countries that relied upon coffee, cocoa, or tea, seven countries upon oilseeds and vegetable oils, three countries upon cotton, and two countries upon cereals for more than 50 percent of their export earnings in 1965.

The major exporters of sugar are Latin America, Australia-New Zealand-South Africa, Eastern Europe, and Other East Asia. These four regions accounted for 73 percent of world sugar exports in 1964.

The three major exporters of vegetables are EEC (European Economic Community), Eastern Europe, and North Africa. The EEC alone accounted for 30 percent of world vegetable exports, while Eastern Europe and North Africa accounted for 14 and 7 percent.

The United States, the EEC, Latin America, OWE (Other Western Europe), and West Asia accounted for 72 percent of world exports of fresh fruits and nuts in 1964. Latin America alone accounted for 27 percent of world fruit and nut exports; the EEC and OWE each accounted for 30 percent; while the United States and West Asia accounted for 6 and 9 percent of world fruit and nut exports in 1964.

The major importers of sugar, fruit, and vegetable crops are the United States, Japan, EEC, EFTA (the European Free Trade Association), U.S.S.R., and Eastern Europe. These six major importers accounted for 74 percent of world sugar, fruit, and vegetable imports in 1964. Western Europe (EEC and EFTA) is by far the most important import market for sugar, fruit, and vegetable crops--accounting for 44 percent of world imports of sugar, fruits, and vegetables in 1964. The United States, the second largest import market, accounted for 13 percent, while together U.S.S.R., Japan, and Eastern Europe accounted for 16 percent of world imports of sugar, fruit, and vegetable crops. Western Europe (EEC and EFTA) alone accounted for 26 percent of world sugar imports and 57 percent of imports of vegetables and fruits.

WORLD TRADE IN SELECTED AGRICULTURAL COMMODITIES, 1951-65

Volume IV.--Sugar, Fruits, and Vegetables

by

Arthur B. Mackie and J. Lawrence Blum 1/

INTRODUCTION

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods. For example, according to the 1966 FAO Trade Yearbook there were 66 less developed countries and territories in 1965 with agricultural exports accounting for more than 50 percent of total export earnings. Because of this heavy dependence upon agricultural exports, fluctuations of export prices for agricultural commodities cause large variations in export earnings and on total economic growth. These variations are especially large in the case of countries depending upon export earnings from only one or two commodities.

In 1965, 34 countries depended upon sugar, fruit, and vegetable exports for more than 20 percent of their export earnings (table 1). Ten countries depended upon these commodities for more than 50 percent of total export earnings. There were 11 countries in which coffee, cocoa, or tea accounted for more than 50 percent of export earnings. Seven countries depended upon oilseeds and vegetable oils, three countries depended upon cotton, and two countries upon cereals for more than 50 percent of their export earnings.

The less developed countries need better information on demand prospects for agricultural exports as a basis for planning and carrying out economic development programs. Future growth in the export demand for agricultural commodities of the less developed countries will influence the amount of land and other resources that can economically be used for expanding the production of export commodities.

This report presents detailed trade data that can be used for evaluating trade prospects for sugar, fruit, and vegetable crops. It contains historical data on the volume of exports and imports for some of these commodities for 19 regions for 1951-65. Trade data on some commodities are presented for 1957-65 and 1962-65 only. Trends in the growth of trade in these commodities by major countries and regions are compared with trends in population and per capita income growth for 1951-65. Data on value of exports and imports of these commodities by regions are not now available in matrix form. However, world export unit values for sugar and selected fruit and vegetable crops are shown in table 2 for prewar and 1948-66. Value trade matrices for some of these commodities can be obtained by multiplying these unit prices by the quantities in the following tables. However, such values will not necessarily equal the import or export values as reported by the United Nations, since the unit prices will differ somewhat by countries.

WORLD PATTERNS OF AGRICULTURAL TRADE

The volume of world agricultural exports increased about 3.5 percent per year from the average of 1948-52 to 1964-65. In real terms, the value of agricultural exports grew at an annual rate of 2 percent during this period (12). ^{2/}

Trade in agricultural products in 1964 was about one-fourth the value of total world trade (tables 3 and 4). In 1964, the value of world agricultural trade amounted to \$38.6 billion. As a group, the less developed countries accounted for 37 percent of world agricultural exports and 16 percent of world agricultural imports (table 5). The value of agricultural exports of the less developed countries in 1964 was \$14,468 million, whereas their agricultural imports were only \$6,186 million. The developed countries were the major markets for the agricultural exports of less developed countries--accounting for 78 percent. The United States alone took 21 percent of the agricultural exports of less developed countries. Agricultural exports of the less developed countries to each other accounted for 14 percent.

As with agricultural exports, the developed countries accounted for the major share (61 percent) of the agricultural imports of the less developed countries. The less developed countries turned to other less developed countries for 32 percent of their agricultural import needs, or slightly less than the 36 percent from the United States (table 5). The remaining 7 percent of agricultural imports of the less developed countries come from the Communist Bloc.

IMPORTANCE OF SUGAR, FRUITS, AND VEGETABLES IN WORLD TRADE

The total value of world trade in sugar, fruits, and vegetables as reported by the 1966 FAO Trade Yearbook was \$4.8 billion or about 12.4 percent of the value of world agricultural trade in 1964. The value of world trade in 1965 was \$4.6 billion or about 12 percent. Sugar was the largest export crop of this commodity group--representing about \$2.6 billion or about 7.0 percent of world agricultural trade in 1964.

The value of fresh fruits--the second largest group--was about \$1.5 billion. The value of vegetable imports in 1964 was \$0.534 billion, while that of dried fruits was \$0.160 billion. ^{3/}

Regionally, sugar exports are of major importance to Latin America, Australia-New Zealand-South Africa, ^{4/} Eastern Europe, and Other East Asia. These four regions accounted for 73 percent of world sugar exports in 1964. Latin America alone accounted for 45 percent of world sugar exports. These exports represent about 8 percent of total export earnings.

^{2/} Underscored numbers in parentheses refer to items in the Selected References, p. 108.

^{3/} These data on export values are averages of world imports and exports as reported by FAO (11).

^{4/} This region is an exporter only because of Australia and South Africa. New Zealand is actually an importer of sugar.

^{1/} Calculated from data in tables 3 and 4.

^{2/} Shares of less developed countries are shown in parentheses.

The main exporters of fresh fruits and nuts are the EEC, OWE (Other Western Europe), Latin America, United States, and West Asia. These five major exporters accounted for 72 percent of world exports of fresh fruits and nuts in 1964. Latin America alone accounted for 27 percent, the EEC and Other Western Europe each for 30 percent, while the United States and West Asia accounted for 6 and 9 percent, respectively of world exports in 1964. These exports represent about 2 percent of export earnings in Latin America, 7 percent in Other Western Europe and less than 2 percent of export earnings in the United States, the EEC, and West Asia.

The major exporters of dried fruits are West Asia and Other Western Europe. These two regions accounted for 61 percent of world exports in 1964, with West Asia alone accounting for 44 percent.

Exports of vegetables are more evenly distributed among all 19 exporting regions than exports of sugar and fresh fruits. However, there are three major vegetable exporting regions (EEC, Eastern Europe, and OWE) that are relatively larger exporters than all other regions. The EEC is the largest of these three, accounting for 30 percent of world vegetable exports in 1964, although these exports represented less than 1 percent of total EEC export earnings. Eastern Europe and OWE--the second and third largest exporter--accounted for 14 and 8 percent, respectively. These exports accounted for only 1 percent of export earnings in these regions.

The major sugar importers are the United States, Japan, EEC, EFTA, and U.S.S.R. These five major importers accounted for 65 percent of world imports of sugar in 1964. Western Europe (EEC and EFTA) was the largest importer of sugar--accounting for 26 percent of world imports in 1964, even though the EEC is currently self-sufficient in sugar. The second largest importer is the United States--accounting for 20 percent of world imports. The U.S.S.R. and Japan were relatively smaller importers, but they accounted for 11 and 8 percent of world sugar imports in 1964.

The major importers of fruits and vegetables are the United States, EEC, EFTA, and Eastern Europe. These four major importers accounted for 74 percent of world imports of fresh fruits, and 71 percent of world imports of vegetables in 1964. Western Europe (EEC and EFTA) is by far the largest import market for fresh fruits and vegetables--accounting for 57 percent of the world fruit and 57 percent of world vegetable imports in 1964.

HISTORICAL TRENDS OF WORLD TRADE IN SUGAR, FRUITS, AND VEGETABLES

The volume of world trade in sugar increased rather unevenly during 1951-65 from 10.5 million metric tons in 1951 to 18.5 tons in 1965 (table 6 and figure 1). ^{5/} However, there were mixed tendencies in the rate of increase in sugar exports among the major exporters. Latin America--the largest exporter--increased its sugar exports rather steadily from 1951 to 1959. They increased very sharply in 1960 and 1961 by about 2 million tons (from about 8 million in 1959 to more than 10 million tons in 1960 and 1961). Sugar exports of Latin America then fell rather sharply from about 10.7 million tons in 1961 to about

^{5/} All tons in this report are metric.

^{1/} The data in parentheses on fresh fruits from 1956-1961 are averages of exports and imports as reported by FAO (11).

WORLD TRADE IN SUGAR, FRUITS, AND VEGETABLE CROPS, 1951-65

U.S. DEPARTMENT OF AGRICULTURE

NEG. ERS 5651-68 (5) ECONOMIC RESEARCH SERVICE

Figure 1

7.5 million tons in 1963 and 1964. Some of this loss in exports was regained in 1965 when exports were increased to about 9 million metric tons. These fluctuations in sugar exports by Latin America are reflected in the indices of world sugar exports in table 6 and figure 1.

The volume of world trade in fruits and vegetables steadily increased during 1951-65 from 9.2 million metric tons in 1951 to 26.1 tons in 1965. Trade in these two groups of commodities has increased faster than sugar, especially since 1960. For example, trade in fresh fruits increased 32 percent, while the volume of trade in vegetables increased 52 percent above the 1959-61 level (table 6). The volume of trade in sugar increased only 8 percent above the level in 1959-61.

There were marked differences also in the growth rates in the volume of trade in sugar, fruits, and vegetables during 1951-65. The most rapid rate of growth was in vegetables. The volume of trade in vegetables increased 9.7 percent per year; while the volume of trade in fruits and sugar increased 6.6 and 3.1 percent per year, respectively. These historical trends in the volume of trade in sugar, fruits, and vegetables are shown in table 6 and figure 1, while the growth rates for these commodities are shown in table 7 along with the growth rates in population and per capita GNP for the major exporters and importers.

The United States, ⁶/EEC, OWE (Other Western Europe), Eastern Europe, Australia-New Zealand-South Africa, West Asia, Latin America, Other East Asia, and North Africa were the largest exporters of sugar, fruits, and vegetables in 1964--accounting for 78 percent of world exports of these commodities. Eastern Europe and Australia-New Zealand-South Africa had the highest growth rates in sugar, fruit, and vegetable exports--increasing at an annual rate of 17.7 and 9.5 percent, respectively. West Asia had the highest growth rate (29.1 percent) in sugar, while Eastern Europe had the highest growth rate (27.0 percent) in fruit exports. Eastern Europe also increased their exports of vegetables faster than all other regions during 1951-65--increasing at an annual rate of 26.2 percent.

The major importers of sugar in 1964 were the United States, Japan, EEC, EFTA, and U.S.S.R. These five major importers accounted for 65 percent of world imports. Eastern Europe had the fastest rate of increase in sugar imports during 1951-65--increasing at an annual rate of 25.7 percent. However, the U.S.S.R. had a higher growth rate in sugar imports from 1953-65.

The major importers of fruits and vegetables are the United States, EEC, EFTA, and Eastern Europe. These four major importers accounted for 74 percent of world imports of fruits and 71 percent of world vegetable imports in 1964. The U.S.S.R. had the highest rate of growth in fruit imports (25.7 percent), while Japan had the highest rate of growth in vegetable imports during 1951-65--growing at an annual rate of 32.2 percent per year (table 7).

⁶/ When considering sugar, fruits and vegetables together, the United States is a large exporter. However, the United States trade in sugar is almost entirely on the import side.

Table 7.--Annual rates of growth in sugar, fruits, and vegetables, population and per capita income, 1951-65

*Includes 1953-1965 only.

**Includes 1956-1965 only.

A more detailed analysis of the changes in the patterns of exports and imports of sugar, fruits, and vegetables is outside the scope of this statistical volume. However, the foregoing observations should be helpful to those using the statistical summaries at the end of this report.

EXPLANATION OF STATISTICAL TABLES

A portion of the Standard International Trade Classification scheme for agricultural products included in this study is given in table 8. Trade data in tables 9-98 were compiled on the basis of this scheme. Those wishing a more detailed definition of this classification should refer to the United Nations manual (15).

The world is subdivided into 19 major trading regions in the tables on trade in sugar, fruits, and vegetables. They are:

Developed Regions and Countries

1. United States.
2. Canada.
3. Japan.
4. EEC--European Economic Community--includes Belgium, Luxembourg, France, Fed. Rep. Germany, Italy, and Netherlands.
5. EFTA--European Free Trade Association--includes Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and United Kingdom.
6. OWE--Other Western Europe--includes Cyprus, Finland, Greece, Iceland, Ireland, Malta, and Spain.
7. Australia, New Zealand, and South Africa.

Eastern Trade Regions and Countries

8. Eastern Europe includes Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and Yugoslavia.
9. U.S.S.R.
10. Communist Asia includes Mainland China, Mongolia, North Korea, and North Vietnam.

Less Developed Regions and Countries

11. Latin America includes all countries in Central and South America and the Caribbean.
12. North Africa includes Algeria, U.A.R. (Egypt), Libya, Morocco, Sudan, and Tunisia.
13. West Africa includes Angola, Cameroon, Central African Rep., Chad, Congo Rep. (Braz.), Democratic Republic of Congo (Kinshasa), Dahomey, Gabon, Gambia, Ghana, Guinea, Ivory Coast, Liberia, Mali, Mauritania, Niger, Nigeria, Portuguese Guinea, Senegal, Spanish Sahara, South West Africa, Upper Volta, and Togo.
14. East Africa includes Botswana, Burundi, Comoro Islands, Ethiopia, Kenya, Lesotho, Mauritius, Malawi, Malagasy Rep., Mozambique, So. Rhodesia, Reunion, Rwanda, Somali Rep., Fr. Somaliland, Swaziland, Tanzania, Uganda, and Zambia.
15. West Asia includes Aden, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Saudi Arabia, Syria, Turkey, Lebanon, Qatar, and Yemen.
16. South Asia includes Afghanistan, Bhutan, Ceylon, India, Nepal, and Pakistan.
17. South East Asia includes Burma, Cambodia, Laos, South Vietnam, and Thailand.
18. Other East Asia includes Hong Kong, South Korea, Macao, Philippines, Portuguese Asia, Ryukyu Islands, and Taiwan.
19. Far East and Oceania includes Australian New Guinea, Brunei, New Caledonia, Fiji, Guam, Indonesia, Malaysia, West Irian, Papua, French Polynesia, Sabah, W. Samoa, Sarawak, and Singapore.

The quantity data for trade in sugar, fruits, and vegetables were compiled from the commodity trade statistics of the United Nations, and supplemented with data from individual country trade statistics, FAO, OECD, EEC, and international commodity association trade publications. Both exports and imports for all countries were compiled in tabular matrix forms and further aggregated into the more concise tabular matrix of 19 major importing and exporting areas (tables 3 and 4).

The reader can best understand the use of the following trade matrices if one or two things are kept in mind. First, the column headings are importing regions, while the exporting regions for each column are shown on the rows in the far left-hand stub.

Table 8.--Commodities and years for which quantity import data were obtained

For example, the tabular matrix for total sugar, fruits, and vegetables for 1951 (table 9), the origin of imports for the EEC can be found by reading down the column labeled EEC. The first figure (86) represents imports of these commodities of 86,000 tons from the United States. The third figure (1,452) represents sugar, fruit, and vegetable imports of 1,452,000 tons from countries within the EEC. As one proceeds down the column to the figure (1,024), it can be seen that the EEC imported 1,024,000 tons of sugar, fruits, and vegetables from Latin America. The last figure (4,204) represents the total of 4,204,000 tons of sugar, fruit, and vegetable imports of the EEC in 1951.

The exports of any region can be found by reading across the column on a particular row, say Latin America. Latin America exported 3,955,000 tons to the United States, 480,000 tons to Canada, 298,000 tons to Japan, 1,024,000 tons to the EEC, and so forth across the table until we arrive at the total sugar, fruit, and vegetable exports from Latin America of 8,422,000 tons.

The absence of data for any one importing region from a particular exporting region, say Japan from South East Asia, may not mean that Japan did not have any sugar, fruit, or vegetable imports from this region. Rather, it means that if Japan had any imports of these commodities, they were less than 500 metric tons. Similar interpretations can be made for other cells in the following tables where there is no data. For most purposes, the absence of data means trade flows of less than 500 metric tons.

The two trade matrices that summarize world total and agricultural trade for 1964 in tables 4 and 5 are presented as guidelines, so that appraisals can be made of the magnitude of export earnings by regions in a recent year and as a basis for comparison for those wishing to evaluate export earnings from sugar, fruits, and vegetables. This latter comparison can be made by multiplying selected unit prices (shown in table 2) by the quantity data in each cell of the appropriate quantity trade tables. However, these resulting values can be considered as only estimates of the value of exports or imports. Actual trade matrices could have been compiled from the United Nations trade data, but time limitations prevented this undertaking.

The following trade data were compiled primarily on the basis of import statistics, since the developed countries have had the most highly developed set of historical statistics and a longer history of reporting these statistics to the United Nations. When import data were lacking, they were supplemented by export statistics. In all cases where there were conflicting data, efforts were made to reconcile these, subject to the magnitudes of exports and imports of any one region as listed by the trade statistics of individual countries show in the FAO trade yearbook (11).

Table 9.--World trade in sugar (061), fruits (051, 052), and vegetables (054) 1951, thousand metric tons*
