CARLOAD SHIPMENTS OF FRUITS AND MELONS FROM STATIONS IN THE UNITED STATES FOR THE CALENDAR YEARS 1920, 1921, 1922 AND 1923

Rapid development of the fruit industry during the past few years has multiplied the problems of successfully marketing the crop produced and has greatly increased the demand for basic statistics relating to the industry. Information as to the number of cars of perishable crops originating at each station throughout the country has been especially sought and the Bureau of Agricultural Economics has been able only partially to meet that demand by furnishing special tabulations and publishing fragmentary reports of such data.

This bulletin shows for each of 17 kinds of fruits and melons the number of cars billed during the calendar years 1920, 1921, 1922, and 1923 from every station handling 10 or more cars in any one year, grouped by States and counties. The information has been compiled from monthly mail reports furnished to the bureau by about 15,000 station agencies of railroad, express, and boat lines. Wherever possible, these reports have been checked against daily telegraphic reports rendered by the operating departments of the carriers and against all other available sources of information. In all of this work the common carriers have given most cheerful cooperation, and acknowledgment and thanks are hereby given for their valuable assistance.

In spite of the precautions taken to insure the accuracy of the figures herein presented, no doubt errors will be found for certain commodities or certain stations. On the whole, however, the figures show accurately the location of producing areas and the relative importance of shipping points and counties.

Stations originating less than 10 cars of a given commodity are grouped together and listed as "Others" in their proper county. Counties originating less than 10 cars of a given commodity are grouped together and listed as "Other counties" in their proper State.

"Conductors' waybills" cover movements from nonagency points forwarded on waybills made by conductors. Where possible, such shipments have been grouped under the proper county; otherwise they are added to the State total.

"Boat reports" cover movements by boat reduced to carlot equivalents. In some instances it has been possible to credit such movements to the originating point, in other cases it is credited to either county or State.

Similar information relating to vegetables is shown in Statistical Bulletin No. 9.

Summary of shipments, total United States

Commodity	1920	1921	1922	1923
