## Statistical Bulletin Series

The bulletins of the statistical series contain available statistics on one or more commodities, annual, monthly, or weekly, on production, movement from the farm, receipts at markets, reshipments, farm and market prices, exports, imports, production in foreign countries, and foreign market prices, for the current year, together with comparable data for earlier years.

Statistical Bulletins have been issued or are now in press (1927) as follows:

1. Cold-storage Holdings.
2. Seed Statistics.
3. Sheep, Lamb, Mutton, and Wool Statistics.
4. Cold-storage Holdings.
5. Horses, Mules, and Motor Vehicles.
6. Grain Futures: Daily Data.
7. Shipments and Unloads of Certain Fruits and Vegetables.
8. Carload Shipments of Fruits and Melons from Stations in the United States.
9. Carload Shipments of Vegetables from Stations in the United States for the Calendar Years 1920, 1921, 1922, and 1923.
10. Statistics of Potatoes and Sweet Potatoes.
11. Hay and Feed Statistics.
12. Wheat and Rye Statistics.
13. Cold-storage Holdings.
14. Prices of Farm Products Received by Producers, North Atlantic States.
15. Prices of Farm Products Received by Producers, North Central States.
16. Prices of Farm Products Received by Producers, South Atlantic and South Central States.
17. Prices of Farm Products Received by Producers, Mountain and Pacific States.
18. Statistics of Hogs, Pork, and Pork Products.
19. Carload Shipments of Fruits and Vegetables from Stations in the United States for the Calendar Years 1924 and 1925.
20. Statistics of Cattle, Calves, Beef, Veal, Hides, and Skins.

### INTRODUCTION

#### NUMBERS OF CATTLE

The data as to cattle on farms and losses from disease are based primarily on census returns and on the reports of the Division of Crop and Livestock Estimates. The original census data were obtained by enumerators who visited the individual farms and obtained the required information from the farmer or some member of his family. The census figures, therefore, represent the tabulation of returns obtained direct from farmers.

In the main, the tables indicate the specific source as well as the nature of the data and the method used to compile them. The information of the reporting service of the Division of Crop and Livestock Estimates consists of two parts, (1) the reports made directly to the bureau in Washington by a staff of correspondents appropriately distributed with regard to the cattle industry, and (2) the reports made by the State agricultural statisticians of the bureau. These reports made by the State statisticians are compiled from information of two kinds, (a) that supplied by a staff of correspondents distributed appropriately throughout the State (or States) which the statistical agent covers, and (b) the information gathered by the agricultural statisticians in travel over their territory.

The information from the State statisticians of the bureau and that received in the bureau directly from its correspondents is compiled in the bureau into the completed report.

The tables showing the number and value of cattle on farms in the United States have been compiled by the livestock reporting service of the Division of Crop and Livestock Estimates, using as the basis

<sup>1</sup> Prepared under the direction of Lewis B. Flour, by Mrs. Florence C. Fitch and James J. Window Division of Statistical and Historical Research.

of the data the census enumeration, with such revisions of the census figures as are necessary to eliminate known errors.

Every precaution is used to make the preliminary figures as nearly correct as possible but on revision later the estimated number of cattle on farms is carefully checked against the information on shipments, receipts at markets, and slaughter, to insure the highest possible degree of accuracy. Table No. 3 on purebred cattle is taken from the 1920 census.

### RECEIPTS, SLAUGHTER, AND SHIPMENTS

The information in regard to receipts, slaughter, and shipments at the markets of the country (Tables 9 to 16) is derived from the reporting service of the Division of Livestock, Meats, and Wool, and for the earlier years, the yearbooks of the various stockyards, as mentioned. It should be noted that for certain of the years included in the tables, full information is not obtainable because of quarantine against foot-and-mouth disease. The group of tables (17 to 19) giving results of shipments is based on a study of the returns made to cooperative shipping associations in the year 1921, by the Division of Cost of Marketing. These tables show the results by distances and by seasons, as well as by straight shipments and mixed shipments.

Tables 20 and 21, showing stocker and feeder and breeding cattle shipments from public stockyards by months, 1921-1925, with State of destination, are compiled from the Bureau of Animal Industry inspection records and, therefore, represent the cattle shipments made on certificates of inspection.

The data for the table on slaughter in the United States by States, compiled from reports of the Bureau of the Census, cover number slaughtered as follows:

(1) In wholesale slaughtering and meat packing establishments. These include plants that slaughter for the retail trade but also wholesale considerable quantities of meats; the reports made by such establishments generally cover both branches of their operations. Establishments slaughtering for the retail trade only are not included, nor are the numbers slaughtered on a custom basis.

(2) On farms and ranges. The schedules used in taking the census of 1910 and 1920 called for the number of domestic animals slaughtered on farms for food. In a few cases the reports received indicated that the establishments were really slaughterhouses that butchered animals as a regular business. Such cases were eliminated and as far as possible the data now relate only to slaughtering which was carried on as a farm enterprise and do not include commercial slaughtering. But since there is no definite line of demarcation between farm operations and slaughterhouse operations, the figures can not be considered to be absolutely accurate, but are given merely to show the general conditions.

(3) Retail slaughter. A special amendment to the act providing for the thirteenth census of the United States required the reporting of the total number of animals slaughtered for food, which was only partly represented by the number slaughtered in wholesale slaughterhouses and on farms and ranges.

The enumerators obtained reports from retail slaughterhouses. These data, combined with wholesale slaughter, were published by

states in the report of 1910. Subsequent reports for that year give only the wholesale slaughter and it is therefore possible to arrive at the retail figure by elimination. Almost two-thirds of the slaughter in 1909 was done in wholesale establishments but the larger number of calves were slaughtered by retail establishments. No data for retail slaughter have been collected since 1910.

The livestock slaughter statistics used in the various tables, are arrived at from information furnished to the bureau by the monthly report of "livestock slaughter costs and yields." The data are obtained from the officers of about 170 of the largest meat-packing concerns, who furnish detailed information, and from about 500 smaller concerns whose accounting systems do not cover as much detail. From the first named, the information obtained gives the source of purchase, whether from stockyards or other source; sex of animals; number slaughtered; live and dressed weight; live cost; quantity edible fat; quantity of edible offal and number of hides, in the case of cattle, calves, and sheep. In the case of swine the quantities of primal parts (cuts), lard, inedible grease, and trimmings are given. The second group of establishments named, furnish information regarding source of purchase, sex of animals, number slaughtered, and live and dressed weight.

These reports are on a monthly basis. Figures covering operations during the month are mailed to the bureau about the tenth of the succeeding month. The figures furnished are carefully edited, tabulated, and computed to averages and percentages. The resulting factors are the basis of the livestock tables.

#### COLD-STORAGE HOLDINGS

The statistics of cold-storage holdings presented in these tables (Tables 41 to 44) are compiled from the regular monthly reports made to this bureau.

For the purpose of these reports it is considered that a cold-storage warehouse is any place artificially cooled to a temperature of 45° F. or below in which food commodities are stored and held for 30 or more days.

The holdings of meats are reported on the first business day of each month. The reports received, after careful editing and correction or confirmation of important apparent discrepancies by correspondence or telegram, are tabulated and a complete report is issued by the twelfth of the month. In compiling the reports it is necessary to estimate the probable holdings of the few concerns not reporting. These estimates are a very small percentage because all firms not reported by a certain date are reminded by a follow-up letter, and from those whose holdings would materially affect the report the information is obtained, if possible, by telegraph. After the schedules have been tabulated, before the report is issued, a representative board, consisting of statisticians and specialists who are familiar with the movements and market conditions of the commodities reported, examine and approve the figures.

Minor discrepancies which could not be handled because of lack of time for correspondence, and corrections received after the report is issued, are adjusted, and revised figures are published the following month with the current report for that date.

The Bureau of Agricultural Economics is entirely dependent upon the voluntary cooperation of the operators of cold-storage warehouses and meat-packing establishments for the information contained in these reports. The returns received each month represent from 95 to 98 per cent of the firms listed and 98 to 99 per cent of the stocks held in the country.

## FARM VALUES AND PRICES

### MONTHLY PRICES

The so-called "farm" prices of milk cows, beef cattle, and veal calves are the prices received by farmers or producers in their local market on or about the fifteenth of each month. They have been collected monthly, beginning with January, 1910, and are available by States and for the United States. The monthly prices are reported by a list of about 13,500 voluntary correspondents made up largely of country merchants, dealers at country shipping points and a few well-informed farmers. From about August, 1920, to November, 1922, these prices were handled by the field statisticians. Prior to and since this period the price schedules have been sent from and returned to Washington.

The correspondent is requested to report on the average of all sales in the correspondent's locality. In calculating the averages for the various States and for the United States it has been assumed that the number of milk cows or beef cattle sold is proportional to the number kept. That is, the State prices are weighted by the January 1 estimates of the number of the different kinds of livestock, in obtaining the average for the United States. Prices of veal calves are weighted by the number of milk cows on farms January 1 of each year.

### JANUARY 1 VALUES

Beginning with 1867, the January 1 values of livestock were obtained by asking the average price per head for all ages for a given kind of livestock. This method has been employed to the present day with milk cows, but beginning with 1894 the inquiry for other cattle (as distinguished from milk cows) has been made on the basis of an age classification. The prices as obtained for the different age groups were averaged to obtain the value per head of other cattle. This change in the nature of the inquiry in 1894 was undoubtedly an improvement, but the comparability of the series was somewhat affected.

The January 1 values have been obtained each year from the crop correspondents of the Division of Crop and Livestock Estimates of this bureau, who are usually farmers. They are requested to report on the "average price per head January 1 in your locality" for milk cows or by age groups for other cattle, with a footnote attached which states "The purpose of asking the average price per head instead of the price per pound is to enable the department to estimate the total value of all stock."

For all States the values are probably somewhat affected by the fact that the crop correspondents reporting these prices are mostly progressive farmers and their quotations may tend to reflect the superior quality of livestock on their own farms. On January 1, 1920, the average value of milk cows in the United States was reported by crop correspondents as \$35.86. The average value of all dairy cows and heifers 2 years old and over for the same date was reported

to the enumerator of the 1920 census as \$76.62. Undoubtedly the crop correspondent has in mind an older and more mature milk cow than that on which the value was obtained by the census enumerator, which included the heifers over 2 years of age which had not freshened as well as other young heifers which had freshened. These values are reasonably comparable as between various years. In making comparisons between States the figures reflect differences in size, breeding, and quality as well as geographical differences in price. The advantage of using January 1 livestock values lies in the long period of time covered, beginning with 1866—a full 60 years—and the fact that the data are available by States.

The monthly prices of milk cows sold are usually higher than the January 1 values of milk cows, because a considerable proportion of the cows sold for milking purposes are relatively young and are either fresh or about to freshen, whereas old cows, even though of dairy breeding, are not generally thought of as milk cows when finally sold for slaughter. The January 1 values of milk cows represent more nearly the general average value of milk cows on farms, whereas the monthly prices tend to show the average price at which milk cows are being bought and sold by farmers.

#### ADEQUACY AND RELIABILITY OF CATTLE PRICES

These values and prices of livestock are obtained by a questionnaire sent to all parts of the country at the same time. The various parts of a State should be represented if the average of the reports is to be reliable. The more variation in the prices reported for a given State the more necessary are a large number of reports if the resulting average is to be dependable.

The variation depends to a considerable extent on how the questions are asked. By dividing up the price question on other cattle by age groups the variability for the particular age group is reduced and the weighted average of these groups is much more reliable with the same number of reports. In the localities where there are relatively more young stock and calves the price for all ages would be lower than in sections where there are a larger proportion of older cattle. As a result the prices per 100 pounds live weight are less variable for a State than the prices per head.

While usually the January 1 values are more variable than the monthly prices, the number of reports is from five to ten times as great, and as a result the average obtained from the larger number of reports is more reliable. The prices of beef cattle per 100 pounds live weight are less variable than the prices of milk cows per head. The prices of veal calves per 100 pounds live weight are usually less variable than beef cattle prices and only about one-half as variable as milk-cow prices.

Beef cattle, milk-cow, and veal prices are from two to six times as variable as the prices of wheat, cotton, corn, and hogs in States of surplus production.

Since the reliability of the average as a measure of the central tendency of a frequency distribution varies with the square root of the number of reports, it is evident that with about the same number of reports for the various kinds of monthly prices, the price samples with the greater variability are much less reliable than those that are less variable.

The change in the monthly prices of milk cows per head and beef cattle per 100 pounds for a given State from one month to the next would need to exceed about 4 or 5 per cent to indicate that a change in price level really had occurred; with veal calves a change exceeding 2 or 3 per cent would be significant in the more important States. With such a range, State monthly prices are of value primarily as indicating the general trend over a period of several months or a year rather than for determining small price changes from month to month. The average monthly prices for the United States, however, are much more dependable because of the large number of reports included.

With the much larger number of reports received from the crop reporters in connection with the January 1 value of milk cows and other cattle, State averages are usually reliable within a range of 1 or 2 per cent.

### MARKET PRICES FOR LIVESTOCK AND MEATS

The prices credited as originating with the market-reporting service of the Division of Livestock, Meats, and Wool are based on the information gathered by the division's reporters as they make their daily rounds of the markets.

Whether in the stockyards where live animals are bought and sold or in the wholesale meat coolers where the rails are filled with carcasses and cuts, the reporter is on the alert, observing trading conditions and hearing the bids made and prices asked as the buyer and seller endeavor to reach an agreement as to a value which will result in an exchange of animals or meat for money. This point of exchange represents the market price, but before it can be recorded so that it will have a meaning intelligible to the outside world the reporter must note the class and grade of the animal or meat being sold. These classes and grades are standards which have come into commercial use through trade customs and practices and have been refined and made uniform for the entire country by the Bureau of Agricultural Economics. The reporter seldom gets a report on every sale but he does get information on a sufficient number to enable him to quote representative prices of all the grades offered.

In the course of his rounds of the market during a day's trading, the reporter will observe that different prices are paid for the same grade of animal or meat. This is partly because of the differences of opinion among buyers and sellers as to values and partly because of the spread of the grade of the animal or meat itself. In order, therefore, to show the true price situation for any particular grade it is necessary to quote a price range extending from the lowest to the highest price paid. If the market offerings on any particular day fail to include the entire range of quality allowed for the grade in question, the reporter will be compelled to make his price range for that grade wider than was shown by the actual sales prices. In this event either his maximum or minimum price, or both, would be "nominal." By a nominal price is meant a price which the reporter believes, in view of existing market conditions, would have been paid had the market offerings included the entire range of quality allowed for the grade quoted. Such a price is included in the report prepared by the reporter for general dissemination in order that prospective buyers or sellers may know the full range of values for all the variations of the class or grade in which they may be interested, even though no actual sales of that class or grade were

transacted. Where a market seldom, if ever, receives a particular class or grade, nominal quotations for that class or grade are omitted.

As market practices and trade requirements involve sorting livestock into classes and subclasses and into use, age and weight selections and finally into grades, making in the aggregate a large number of grade groups, it is impossible, because of space limitations in a market report, to quote a price range on every grade of livestock that might be offered. For this reason it is a common practice in reporting prices on certain classes of livestock to quote a price range on several grades combined, as for example, feeder heifers, common to choice. In this instance the price range covers four grades—common, medium, good, and choice.

Copies of daily market reports with their price ranges on different grades and groups are received in the Washington office of the bureau where a statistical force reduces each range to a single figure by determining its arithmetical mean. This mean is considered the daily average price for the particular grade or group it represents. Weekly average prices are calculated by determining the mean of the daily average prices. The monthly average price represents the mean of four, or five, weekly averages, depending on the proportion of the fifth week falling within the month in question. Likewise the yearly average price represents the mean of the 12 monthly averages.

Top price as the name indicates represents the highest price paid for the class of stock offered on the day or period covered. In the case of cattle, top prices are quoted only on steers, but they are unsatisfactory for comparative purposes because of the possible wide variations in the maximum quality of the market offerings in the periods to be compared.

Bulk of sales prices represent the price range which would include the bulk of the market offerings. This price range is quoted in order to give the reader of a market report an intelligent idea as to the prices at which the majority of the market offerings are being sold.

Prices on purebred animals are obtained by the bureau annually by sending schedules to approximately 36,000 breeders who make reports on their total sales during the year. Prices are reported on the basis of sex and age groups and according to whether the sale was by auction or by private treaty. From these prices the bureau calculates the average price for each sex and age group according to breeds, and in addition to these averages it published the top or highest price reported for each group.

#### HIDES AND SKINS

Stocks of hides and skins, and the number disposed of during the month are compiled from the Report on Hides, Skins, and Leather, issued monthly by the Department of Commerce. These reports received monthly from butchers, packers, tanners, dealers, and importers, show the number of hides and skins, domestic and foreign either held by them or in transit on the last day of the month. These reports are edited and tabulated by the Bureau of the Census and are published the following month.

Monthly and yearly wholesale prices of cattle hides, calfskins and kipskins, were compiled from the annual reports of the Chicago Board of Trade, except for the current year's data which were compiled from quotations published in Hide and Leather weekly.

TABLE 1.—Cattle: Number and value on farms in the United States January 1, 1867-1926

Jan. 1—	Milk cows <sup>1</sup>			Other cattle <sup>2</sup>

Division of Crop and Livestock Estimates; figures in italics are census returns.

Revisions of former estimates for 1921-1924 and estimates for 1925 and 1926 are based on analysis and interpretation of dairy cow and heifer and beef cow and heifer figures, census of 1920 and of dairy cow and heifer, beef cow and heifer, and cows milked, preliminary reports, census of 1925.

<sup>1</sup> 1920 and subsequently reported as "Cows and heifers 2 years old and over kept for milk." "Heifers 1 to 2 years old being kept for milk cows" reported separately as follows: 1920, 4,418,000; 1921, 4,155,000; 1922, 4,023,000; 1923, 4,147,000; 1924, 4,137,000; 1925, 4,234,000; and 1926, 3,861,000.

<sup>2</sup> Not reported separately, 1920-1926.

<sup>3</sup> Not reported separately. Figures obtained by subtracting "Cows and heifers 2 years old and over kept for milk" from total.

TABLE 2.—Estimated total number of cattle (on farms and otherwise) in United States, 1850-1925

[The estimates are made by adjustment of the census figures to a January 1 basis and to include all ages and all animals in towns, villages, and ranges as well as on farms. The estimates of the department have been used to obtain the fluctuations between census years. A method is used by means of which the ratio of the estimates in successive years for 10 years after each census is multiplied by a constant factor so as to make the tenth year agree with the next census. The estimates for dairy cattle have been obtained from those for milk cows by multiplying by 1.572—the ratio of total dairy cattle to milk cows 2 years old and over in the census of 1920—this being the first census in which dairy cattle of all ages were separated from beef cattle. The estimates for beef cattle are simply the differences between the estimates for total cattle and dairy cattle. The term dairy cattle, resting as it does on the old census term "Milk cows" from 1850 to 1890, probably does not mean quite the same thing throughout. There has probably been a much greater increase in the amount of strictly dairy blood than indicated.]

Jan. 1—	Cattle			Jan. 1—	Cattle

<sup>1</sup> Registered. The number shown are those reported to the enumerators of the 1920 census as the instruction accompanying the question specified: "Report the number and breed of any animals on this farm that are registered." The number shown probably included relatively few of those animals that were eligible to registry, but not actually registered, and few of those animals that were of pure breeding but not eligible to registry because records of breeding had not been kept.

<sup>2</sup> Includes animals reported as purebred, with breed not specified.

Division of Statistical and Historical Research. Compiled from official sources and International Institute of Agriculture except as otherwise stated. Figures published as available in Foreign Crops and Markets.

<sup>1</sup> Revised estimates of Division of Crop and Livestock Estimates, 1921-1925. These figures are made on the basis of census figures of 1920 and 1925, of annual assessment data and other information. The estimates prepared in the Bureau of Animal Industry by adjustment of the census figures to a January 1 basis and including all animals in towns and villages as well as on farms and ranges are as follows: A average, 58,000,000; 1923, 65,900,000; 1924, 63,200,000; 1925, 66,600,000.

<sup>2</sup> Countries reporting in December have been considered as of January of year following.

<sup>3</sup> Average for five years immediately preceding war, if available, otherwise for any year within this period, except as otherwise stated.

<sup>4</sup> Census June, 1914.

<sup>5</sup> Census.

<sup>6</sup> 1908.

<sup>7</sup> 1920.

<sup>8</sup> 1921.

TABLE 5.—Cattle: Number in specified beef importing countries of Europe<sup>1</sup>

[In thousands—i. e., 000 omitted]

Year	Republic of Germany, <sup>1</sup> January	France, <sup>2</sup> January	United Kingdom, June	Republic of Austria, <sup>3</sup> January	Belgium, <sup>4</sup> January
Pre-war average <sup>5</sup> .....	18,474	15,338	11,933	2,356	1,925
1923.....	16,316	15,576	11,999	2,162	1,517
1924.....	16,391	13,749	12,081		1,603
1925.....	17,320	14,025	12,037		1,628

Division of Statistical and Historical Research. Compiled from official sources and International Institute of Agriculture, except as otherwise stated. Figures published as available in Foreign Crops and Markets.

<sup>1</sup> In addition to these countries, Italy now imports considerable quantities of frozen beef, but as no slaughter or meat statistics are available it has not been included in this table.

<sup>2</sup> Countries reporting in December have been considered as of January of the year following.

<sup>3</sup> Average for five years immediately preceding war, if available, otherwise for any year within this period, except as otherwise stated.

<sup>4</sup> Census.

<sup>5</sup> Excluding Channel Islands which in 1922 had 16,244 cattle.

<sup>6</sup> No estimate was made as of December, 1923, which estimate would have been considered as of January, 1924, as explained in footnote 2 so the estimate for October, 1923, is given here.

TABLE 6.—Cattle: Tick eradication, progress and status of the work, December 10, 1925

State	Counties quarantined		Released counties tick free Nov. 1, 1925	Counties released to Dec. 10, 1925	Cattle dipped, year ended June 30, 1925 <sup>1</sup>	
	July 1, 1906	Dec. 10, 1925			Herds	Cattle

Total.....	984	261	601	723	1, 786, 486	24, 079, 918

Division of Statistical and Historical Research. Rearranged from reports of the Bureau of Animal Industry.

Areas released from Federal quarantine December 10, 1925: Alabama, 2 counties and 1 part of county; Arkansas, 2 counties and 2 parts of counties; Florida, 6 counties and 4 parts of counties; North Carolina, 7 counties; and Oklahoma, 1 county and 2 parts of counties. (The entire State of North Carolina is now released.)

Areas requarantined December 10, 1925: Alabama, 1 part of county; Louisiana, 3 parishes and 1 part of parish; and Texas, 4 parts of counties.

<sup>1</sup> Approximately 25,000 dipping vats used for these official dippings.

Division of Statistical and Historical Research. Prior to 1915 figures compiled from yearbooks of stockyard companies, except East St. Louis (1876 to 1893 from the Fourteenth Annual Report of Bureau of Animal Industry; 1897 to 1914, from Merchants Exchange Annual Report); subsequent figures from data of the reporting service of the Division of Livestock, Meats, and Wool. Figures for individual markets available in January issues of Crops and Markets Supplement.

<sup>1</sup> Figures not available prior to 1915.

TABLE 12.—Cattle and calves: Monthly receipts, stocker and feeder shipments and total shipments from all public stockyards, 1915-1925<sup>1</sup>

Division of Statistical and Historical Research. Prior to 1915 figures compiled from yearbooks of stock-  
yard companies; subsequent figures compiled from data of the reporting service of the Division of Livestock,  
Meats, and Wool. Current figures available in Crops and Markets supplement, monthly.

TABLE 15.—Cattle and calves: Monthly receipts, local slaughter, and stocker and feeder shipments at public stockyards, 1915-1925

<sup>1</sup> Division of Cost of Marketing.

<sup>2</sup> Shrinkage represents the difference between the shipping-point weight and the terminal weight, including the weight of all crippled and dead. Hence the shrinkage figure is over and above the direct losses due to crippled and dead.

<sup>3</sup> Straight shipments contain but one species of livestock.

<sup>4</sup> Mixed shipments contain more than one species of livestock.

TABLE 18.—Cattle: Percentage crippled in shipments by cooperative associations, 1921

Division of Statistical and Historical Research. Data for wholesale slaughtering and meat-packing establishments compiled from Meat-Packing Report, Census of Manufacturers, 1921, p. 17, and 1923, p. 13. Data for farms and ranges for 1909 from Census Report of Manufactures, 1910, Vol. X, p. 345; for 1919 from Report of Agriculture, Census of 1920, Vol. V, p. 693. Data for retail slaughter obtained by subtracting wholesale slaughter from total wholesale and retail slaughter in Census Report of Manufactures, 1910, Vol. X, p. 345.

<sup>1</sup> In addition there were 377,957 beeves and 243,360 calves slaughtered on a custom basis in 1914, and 553,339 beeves and 357,692 calves for 1919. No corresponding data for 1909, 1921, or 1923.

<sup>2</sup> No data collected by the Bureau of Census for 1914, 1921, or 1923 on farm or retail slaughter.

<sup>3</sup> No data obtainable for retail slaughter in 1919.

<sup>4</sup> Including calves.

<sup>5</sup> Included with cattle.

1925.....	15, 290	24, 805	3, 871			(?)			

Division of Statistical and Historical Research. Compiled from official sources and International Institute of Agriculture except as otherwise stated. Figures published, as available, in Foreign Crops and Markets.

<sup>1</sup> Estimated by Bureau of Animal Industry. Ratios are established for slaughter other than under Federal inspection which are subject to change due to more recent data from census and other sources.

<sup>2</sup> Does not include public abattoirs.

<sup>3</sup> Year ended March 31 of following year.

<sup>4</sup> In addition there was an average of 14,155 slaughtered on account of disease in 1910-13 and 27,885 in 1923.

<sup>5</sup> Average for five years immediately preceding war wherever available.

<sup>6</sup> Average 1912-13.

<sup>7</sup> Year 1910.

<sup>8</sup> Inspected slaughter in 1925 reached 975,814 compared with 890,021 in 1924 or an increase of 8 per cent.

TABLE 33.—Cattle and calves: Slaughtering in specified beef importing countries<sup>1</sup>

[In thousands—i. e., 000 omitted]

Year	Republic of Germany, home and inspected	France <sup>2</sup>	United Kingdom, total	Republic of Austria <sup>3</sup>	Belgium, farm and inspected
Pre-war <sup>4</sup> .....	7, 057	3, 166	3, 362	1, 910	758
1923.....	7, 753	2, 987	3, 000		625
1924.....	6, 840	2, 060	3, 020		599
1925.....	7, 478	2, 444	3, 009	755	

Division of Statistical and Historical Research. Compiled from official sources and International Institute of Agriculture except as otherwise stated. Figures published, as available, in Foreign Crops and Markets.

<sup>1</sup> Italy also imports considerable quantities of frozen beef but no slaughter or meat statistics are available.

<sup>2</sup> Average 1909-13, slaughtering in municipal slaughterhouses of all France. Subsequent years based on Paris slaughtering, which during the years 1909-13 averaged 23 per cent of the cattle and 15 per cent of the calves slaughtered in the municipal slaughterhouses.

<sup>3</sup> Estimates furnished by Doctor Thalmayer, Court Councillor for Austria; for year 1910 excluding Burgenland; 1925 figure includes Burgenland and represents the average for 1922-25.

<sup>4</sup> Average for five years immediately preceding war except for some countries having changed boundaries for which date are available for one year only.

<sup>5</sup> In 1911 the cattle and calves slaughtered in all France including farm killings was estimated by J. E. Luens, agronomic engineer in *Annales de la Science Agronomique Française et Etrangère* at 1,900,000 cattle and 3,000,000 calves. For the year 1911 the cattle and calves slaughtered in municipal slaughterhouses comprised 60 per cent of the total cattle slaughtering in France.

<sup>6</sup> Average agricultural years 1906-10 to 1913-14.

<sup>7</sup> Home slaughter estimated on basis of returns for 1912 and 1924 when home slaughter averaged 2 per cent of inspected.

<sup>8</sup> Based on Wedde & Co.'s estimate that 25 per cent of total cattle are available for slaughter each year.

TABLE 34.—*Beef and veal: Estimated production in important beef exporting countries*

[In million pounds—i. e., 000,000 omitted]

Year	United States		Argentina		Australia	Canada, home and inspected	Uruguay, inspected <sup>1</sup>	New Zealand, inspected <sup>2</sup>
	Federally inspected	Total <sup>1</sup>	In packing plants	Total <sup>1</sup>				
Pre-war average <sup>3</sup> .....	4,100	7,157	1,190	2,312	.....	426	469	221

1924.....	5,324	7,055	1,183	.....	<sup>4</sup> 943	669	595	391
1925.....	5,476	7,146	2,177	.....	.....	.....	.....	.....

Division of Statistical and Historical Research. Compiled from official sources and International Institute of Agriculture except as otherwise stated. Figures published, as available, in *Foreign Crops and Markets*.

<sup>1</sup> As estimated by the Bureau of Animal Industry.

<sup>2</sup> Estimated by multiplying slaughterings by average dressed weights of animals slaughtered at packing houses.

<sup>3</sup> Production for years ended Mar. 31 of following year.

<sup>4</sup> For five years immediately preceding war when available.

<sup>5</sup> Average per annum for three years ending 1923-24.

TABLE 35.—*Beef and veal: Estimated production in specified beef importing countries of Europe<sup>1</sup>*

[In million pounds—i. e., 000,000 omitted]

Year	Republic of Germany, home and inspected	France <sup>2</sup>	United Kingdom, total	Republic of Austria	Belgium, home and inspected
Pre-war average <sup>3</sup> .....	2,139	1,240	1,714	251	316

1924.....	1,789	1,022	1,613	.....	168
1925.....	<sup>4</sup> 2,011	1,006	.....	177	.....

Division of Statistical and Historical Research. Compiled from official sources and International Institute of Agriculture except as otherwise stated. Figures published, as available, in *Foreign Crops and Markets*.

<sup>1</sup> In addition to these countries, Italy now imports considerable quantities of frozen beef, but as no slaughter or meat statistics are available it has not been included.

<sup>2</sup> Estimated by multiplying slaughterings by average dressed weight of animals slaughtered in the Villette and Vaugirard slaughterhouses in Paris.

<sup>3</sup> Average for five years immediately preceding war, except for some countries having changed boundaries, for which data are available for one year only.

<sup>4</sup> Home production estimated on basis of returns for 1912 and 1924, when home slaughter averaged 7 per cent of inspected.

CATTLE, CALVES, BEEF, VEAL, HIDES, AND SKINS

Division of Statistical and Historical Research. Compiled from report of Bureau of Animal Industry, issued July 1926; quantities based on carcass weight; edible offal not included because of the variable percentage used in edible products. Subject to revision.

<sup>1</sup> Not including goat meat.

Division of Statistical and Historical Research. Compiled from Crops and Markets Supplement, June, 1924, p. 191, for 1922; April, 1925, p. 127, for 1923 and 1924. 1925 data from records of the Division of Livestock, Meats, and Wool. Published yearly, as available, in Crops and Markets Supplement.

This table does not represent all of the animals sold in the United States, but it does represent the sales of a large number of breeders in various sections of this country and should indicate the trend of prices for the years reported.

Division of Statistical and Historical Research. Calculated from quotations in the Review of the River Plate. Prices prior to May, 1924, originally quoted on basis of price per head supplemented from 1916 by price per pound of dressed carcass weight. Calculations assume average dressed weight of 730 pounds or live weight of 1,250 pounds. Live-weight quotations per pound from May, 1924. Converted from Argentine currency at average monthly rate of exchange.
