STATISTICAL BULLETIN SERIES

The bulletins of the statistical series contain available statistics on one or more commodities, annual, monthly, or weekly, on production, movement from the farm, receipts at markets, re-shipments, farm and market prices, exports, imports, production in foreign countries, and foreign market prices, for the current year, together with comparable data for earlier years.

At the present time (January 2, 1930), statistical bulletins have been issued or are now in press as follows:

1. Cold-storage holdings.
2. Seed statistics.
3. Sheep, lamb, mutton, and wool statistics.
4. Cold-storage holdings.
5. Horses, mules, and motor vehicles.
6. Grain futures; daily data.
7. Shipments and unloads of certain fruits and vegetables.
8. Carload shipments of fruits and melons.
9. Carload shipments of vegetables.
10. Statistics of potatoes and sweet potatoes.
11. Hay and feed statistics.
12. Wheat and rye statistics.
13. Cold-storage holdings.
14. Prices of farm products received by producers, North Atlantic States.
15. Prices of farm products received by producers, North Central States.
16. Prices of farm products received by producers, South Atlantic and South Central States.
17. Prices of farm products received by producers, Mountain and Pacific States.
18. Statistics of hogs, pork, and pork products.
19. Carload shipments of fruits and vegetables from stations in the United States.
20. Cattle, calves, beef, veal, hides, and skins statistics.
21. American forests and forest products.
22. Vegetable statistics.
23. Carload shipments and unloads of certain fruits and vegetables, 1924-1926.
24. Statistics of fats, oils, and oleaginous raw materials.
25. Dairy statistics.
26. Cold-storage holdings.
27. Carload shipments of fruits and vegetables from stations in the United States for the calendar years 1926 and 1927.
28. Corn Statistics.
29. Statistics of Oats, Barley, and Grain Sorghums.

INTRODUCTION

The purpose of this bulletin is to present statistical data, relating to corn, and its important products of practical use to farmers, students of agriculture, research workers, and all others who may be interested. The figures have been made as inclusive as possible so as to show the long-time trends in such matters as production, prices, and market movements.

In the main the tables show the specific source, character of the data, and method used in compiling them, and have been arranged in groups showing acreage, yield per acre, production, cost of production, market movements, prices to producers and at certain domestic and foreign markets, corn-meal prices, and certain other statistical matters.

¹ Prepared under the direction of F. E. Ratcliffe, assisted by Caroline G. Gries, Florence C. Fitch, Jeanne Cavanaugh, John L. Wilson, and June A. Hodgkins, from data gathered by the Division of Crop and Livestock Estimates, Grain Division, Division of Farm Management and Costs, Division of Statistical and Historical Research, and other sources as indicated in footnotes.

LIMITATIONS AND QUALIFICATIONS

When using statistics contained in this bulletin certain limitations should be kept in mind. For example, the acreages of corn in the United States or in any State do not purport to represent the exact number of acres but estimates or an approximation of the exact acreages. The same can be said of all figures that are derived from returns to inquiries about factors relating to the various crops. In general, the figures should be used as trend indicators rather than as exact measures.

Foreign statistical data in this bulletin are compiled from official sources in the majority of cases. The data should be fairly reliable but are subject to whatever errors may result from shortcomings in the reporting and statistical services of the various countries. Inaccuracies may result from method of nomenclature and classification in different countries and through the conversion of foreign units into domestic equivalents. This applies particularly to acreages and production figures. Trade figures, among other things, are subject to lack of uniformity in the classification of goods among the various foreign countries and the United States, different trade practices, and carelessness or failure in recording countries of origin and final destination, and different practices in recording reexported goods.

SOURCES AND METHODS OF COMPILATION

Domestic statistical data have been obtained from several sources, including daily, weekly, and monthly trade papers, reports by boards of trade and chambers of commerce, and Government publications. The results of special research studies of governmental and private agencies have been used, but whenever possible official Government figures have been used. If these were not available, only such private figures as are believed to be reliable have been used.

The data on estimate of acreage, stocks, production, yield per acre, farm prices, condition of crops, and stocks of corn in the United States are supplied by the Division of Crop and Livestock Estimates. That division collects the data from three sources: (1) Voluntary township reporters, reporting for their immediate locality; (2) voluntary price reporters; and (3) salaried agricultural statisticians for each State or group of States, each with a corps of voluntary field aides. At present there are about 38,500 township reporters and about 40,000 field-aide reporters.

From the information supplied by crop reporters and field statisticians supplemented by other data, the crop reporting board in the Washington office arrives at an estimate or forecast for each State. These estimates and forecasts concerning the corn crop, together with similar estimates and forecasts concerning other crops, constitute the Government crop reports. They are released on dates previously announced. The schedule given below shows the dates and nature of the 1928 reports so far as they relate to corn. Similar information is released each year on corresponding dates. The preliminary estimate of yield per acre and total production based on acreage as reported July 1 is reported on November 1. Final estimates of production for the year, based on harvested acreage and yield per acre as of December 1, are released about the middle of December. Any revisions of the data for the preceding year are made in December.

DATE AND SCOPE OF REPORTS FOR CORN, 1928

March 8: Stocks on farms March 1 and shipments out of county where grown.

March 16: Intentions to plant.

July 10: Estimate of acreage, condition, and indicated productions as of July 1.

August 9: Estimated condition and indicated production as of August 1.

September 10: Estimated condition and indicated production as of September 1.

October 9: Estimated condition and indicated production as of October 1.

November 9: Preliminary estimate of production and stocks on farms as of November 1.

December 14: Estimated acreage, production, and value.

Acreages for the years 1839, 1849, 1859, 1869, 1879, 1889, and 1909 are as reported by the Bureau of the Census; acreages in 1919 and 1924 are based upon the census, supplemented by State enumerations. In the intercensal years to 1909, and from 1911 to 1915, estimated acreages were obtained by applying estimated percentages of decrease or increase to the published acreage in the preceding year, except that a revised base was used for applying the percentage estimates whenever new census data were available. For the years 1890 to 1908, acreages have been revised to be consistent with the preceding and succeeding censuses. The estimates from 1915 to 1918, and from 1919 to date are based upon acreage changes from year to year as shown by samples of approximately 2 per cent of the crop acreage in each year, supplemented by State enumerations.

The estimates before 1890 are the original estimates. The Division of Crop and Livestock Estimates will revise these earlier estimates as soon as possible so as to make them entirely comparable with the revised estimates since 1890, but in order to make a complete series of acreage figures from 1866 to date the earlier estimates are included in this bulletin. Yields per acre are estimates based upon reports of one or more farmers in each agricultural township, on the average yield per acre in their localities. Production estimates are secured by multiplying the acreage by yield per acre, therefore they represent not only the quantities of corn harvested as grain, but in addition what would have been harvested had all the corn used for silage, for hogging down, and for other purposes been matured and picked. In some cases production estimates are revised in the following year on the basis of State enumerations and records of shipments. Stocks on farms are reported twice each year, on March 1 and November 1. Estimates of stocks as of the above dates are based upon information sent in by crop reporters concerning the percentage of total production on hand in their localities. Estimates of shipments out of county where grown as of March 1, and quality and condition of crops at various dates are obtained in the same manner. By "shipments out of county where grown" is meant the quantity of grain actually sold to go out of the county—not grain sold from one farmer to another or sold locally within the limits of a county.

Figures of intentions to plant are secured by the Division of Crop and Livestock Estimates from 40,000 to 50,000 producers each year. These reports indicate farmers' intentions to plant as reported about March 1, compared with the acreage grown by them the year before, and are not a forecast of the acreage that actually will be planted.

The tables on cost of producing corn were supplied by the Division of Farm Management and Costs. Data were secured by sending questionnaires to farmers located in all of the States. The tables

show for each year the number of reports upon which the results are based.

Sources of United States import and export statistics of corn are indicated in the various tables. Trade statistics for foreign countries with a few exceptions which are noted are taken from official reports of the various countries. Freight rates were supplied by the Interstate Commerce Commission.

Statistics on receipts and shipments are monthly and yearly totals of daily movements as tabulated from the annual reports of boards of trade or chambers of commerce at the markets at which receipts and shipments are reported and from other sources as shown in footnotes. Primary receipts and shipments are shown at those cities which include the bulk of the grain moved. Markets included are indicated in the tables showing primary receipts and shipments.

Movement data, supplied by the Grain Division, show inspected receipts and shipments by grades. The Grain Division issues these figures for the purpose of showing the quantities of grain handled. Inspected receipts should not be considered as a check on movement from farms or on production estimates, as there is necessarily some duplication in inspections of grain. After the grain leaves the hands of the first buyer it is inspected in connection with practically all commercial transactions through which it passes. Such inspections are necessitated by loss of identity of the grain each time a car is unloaded.

An attempt has been made to show as nearly as available data will permit the quantity of corn used for other purposes than that fed to livestock, used for seed, and exported. Statistics in this bulletin showing such use of corn include the quantity used for the production of alcohol and other distilled spirits, quantity used in the production of fermented liquors, quantity milled in the States, the quantity used in the manufacture of cornstarch, glucose, etc. and the quantity of corn meal produced in the States as compiled by the Census of Manufactures. Corn meal is shown separately, but is part of the quantity milled. A small part of the quantity used for these purposes probably goes into prepared feeds for livestock. The average quantity of corn used for these purposes during the period 1915-1925 amounted to approximately 8 per cent of the average corn production during the same period.

The data on supply-distribution, and disappearance were compiled from sources indicated in the tables. The supply of corn is the carry-over of November 1, which includes stocks on farms, the commercial visible supply, the new crop, and corn imported during the crop year. The quantity of corn distributed includes the items of exports, millings by merchant and custom mills, corn ground (wet process) in the manufacture of starch, glucose, etc., quantities used in the manufacture of alcohol and other distilled spirits, seed requirements, and the carry-over of October 31. The distribution figures do not show completely the use made of corn other than for feed and loss as no definite information is obtainable on the quantity of corn used in the manufacture of breakfast foods and similar products. Other uses made of corn, however, would be only a small percentage of the total supply. Disappearance for feed and loss is the difference between total supply and total distribution. Animal units are in terms of corn consumption rather than total feed consumption. The number

of livestock in each of the several classes is weighted according to the estimated percentage of the total fed to each class, as given in the Department of Agriculture Yearbook for 1920 (p. 811, Table 305).

By applying these percentages to the average disappearance of corn during the period 1915-1925, the average yearly quantity of corn consumed by the various classes of livestock and poultry, including horses and mules, cattle, swine, sheep, and chickens was estimated. To arrive at the average number of bushels consumed per head, the average quantity of corn consumed by each class of livestock was then divided by the average number of animals in each class for the period 1916-1926. These are the January 1 number as estimated by the Division of Crop and Livestock Estimates supplemented by census figures during census years, excepting chickens, the number of which was based on the census figures of 1910 and 1920. To reduce the number of all classes of livestock and poultry to terms of animal units, the average quantity of corn consumed by a horse was considered as 1 unit and the quantity consumed by each unit of the other classes as a percentage of the quantity used by a horse. In determining the number of animal units then a horse was considered as 1 unit, a cow as 0.3 unit, a hog as 0.86 unit, a sheep as 0.03 unit, and a chicken as 0.017 unit. These units were then applied to the number of the various classes of livestock on January 1 to determine the number of animal units each year. Such a computation as this, of course, can be expected to yield only roughly approximate results. The quantity of corn fed to animals varies from year to year depending upon the relative abundance and cheapness of corn and the other feeds available. Thus in years when the price of wheat is low relative to corn, chickens will be fed more wheat and less corn than in other years. However, satisfactory estimates of these changes are not available.

The tables on corn-and-hog ratios supplied by the Division of Crop and Livestock Estimates show the number of bushels of corn required to buy 100 pounds of live hogs, based on the average farm prices of corn and of hogs for the month. The yearly averages are not based upon the average price of corn and hogs for the year but are simple averages of the monthly ratios.

The data on prices received by producers, commonly called "farm prices," have been supplied by the Division of Crop and Livestock Estimates. Such prices are those the farmers receive at their local markets and are not strictly "at-the-farm prices." Farm-price data are not passed on by the crop-reporting board as are other reports.

The department began collecting farm prices in 1867 when farm prices of crops as of January 1 were obtained from correspondents. The date of reporting prices of crops was changed to December 1 in 1872. Crop prices reported as of January 1, 1867-1872, were considered equivalent to the prices as reported as of December 1, after the change was made, thus making a complete series of December 1 prices since 1866. The prices of crops for the period 1866-1878, as now published have been reduced to a gold basis, using equivalents supplied by the United States Treasury Department.

Beginning with the year 1908 monthly prices paid to farmers by States are shown. From January, 1908, until December, 1923, these monthly prices were reported on the first of the month by county reporters in connection with monthly crop reports. Beginning with

December, 1923, all monthly prices are for the 15th of the month. The first-of-the-month prices for the period prior to December, 1923, have been converted to an approximation of a 15th-of-the-month price by taking the average of the prices reported on the 1st of two consecutive months.

Since January, 1924, monthly prices have been obtained from a price-reporter list, which is made up almost entirely of small-town dealers in farm products, merchants, and a few well-informed farmers.

That the farm price may fairly well represent the average price received by producers, it is necessary that the samples be well distributed so as to represent both surplus-producing and deficit areas. When the reports received are well distributed there is a general tendency for more reports to be received on the price of a product in those sections of the State in which the most sales occur; that is, in the surplus-producing sections. For weighting purposes, each State is divided into about nine crop-reporting districts. In determining the State farm price of corn in this bulletin the price reports from each district are averaged and these district averages are weighted by the number of acres of that crop raised in each district the last year for which data are available. The State averages are combined into average prices for the United States and weighted by the latest estimates of production.

In States where a yearly enumeration of acreage is made, the district weights are usually based on the preceding year's acreage. In many of the States the latest census acreage is used. Prior to 1924, when crop prices as of the first of the month were obtained from crop reporters, the prices of crops were weighted by counties within the State, and the census acreage was used as a basis of weighting.

The annual average price for the United States is a weighted average of the monthly prices of each crop year. The weights are based on the percentage which each month's farm marketings is of the total of the crop year to which the price applies. This method will take care of any unusual variations in marketings as they occur.

The December 1 farm value is determined by multiplying the December 1 estimate of production by the December 1 price per bushel.

The market-price statistics are, for the most part, weighted average prices computed by weighting the selling price by the number of car lots reported sold. The weighted average prices for all classes and grades of corn at Chicago, Kansas City, Minneapolis, St. Louis, Omaha, and Cincinnati and at those six markets combined are comparable with farm prices. The farm prices are averages of the several prices reported covering all classes and grades sold from the farm. Sources and methods of compiling other domestic price-statistic tables are indicated in footnotes to the tables.

RELIABILITY OF DATA

For a reported farm price to be absolutely accurate such a price would have to be exactly the same as one computed from reports of the total quantity sold and the total receipts from the sales. Since it is manifestly impossible to secure such reports, essentially accurate prices are obtained by averaging a large number of reports. The measure of reliability of such reports is the size of the probable difference between the reported average price and the average of an

indefinitely increased number of individual reports. Tested in this way the prices reported in this bulletin would not be materially changed by a more extensive system of reports than that now in use. A somewhat detailed study of the reliability of the farm-price data indicates that the prices are based on a sufficient number of reports to render them reasonably stable and reliable. In the small States the December 1 prices of corn in this bulletin are probably more reliable than the monthly prices, as they are based on a much larger number of price reports.

What is said of the reliability and adequacy of farm-price data may be applied in a measure to other data where estimates are involved, such as acreage, stocks of grain, production, yield per acre, condition of crops, production costs, etc. As noted before, intercensal figures of acreages are estimated percentages of decrease or increase from the published acreage in the preceding year, revised as indicated to be consistent with census figures. Since these estimated percentages are sent in by reporters, the measure of reliability of the reports is the size of the probable difference between the reported average and the average of an indefinitely increased number of individual reports. Estimated figures used in this bulletin would not be changed materially if a more extensive system of reporting were used; therefore, such figures can be considered as reasonably reliable. The reports come from from all sections of the country and, in most instances, are weighted according to their importance, thus giving confidence in the adequacy of figures computed from them.

Market-price statistics may be considered very reliable as they are, in most cases, weighted averages of daily prices of sales as reported by the trade, subject, of course, to errors that may be made in reporting. Reported sales are approximately 50 per cent of actual receipts on the various markets. Other trade statistics such as market movements may be considered fairly reliable, allowing for some duplications of figures.

In general, domestic statistical data may be considered reasonably reliable and adequate for all practical purposes.

ANALYSIS OF FOREIGN TRADE IN CORN AND CORN PRODUCTS

Although the United States produces two-thirds of the world's supply of corn a comparatively small quantity flows into the channels of foreign trade. In 1927 less than 1 per cent was marketed abroad. A very large percentage is exported as pork and pork products. Only twice during the last 25 years have United States exports amounted to more than 5 per cent of the crop, and 1897 and 1899 were the only years on record in which they exceeded 10 per cent. Each year the domestic market absorbs larger and larger quantities, and this fact, together with the marked increase in production in Argentina, largely accounts for the decline in our exports. Argentina is now the world's largest exporter of corn and our most important competitor. Many of the northern European countries prefer the small-grained but hard, flinty Argentine corn to the larger and softer grain from the United States. Other surplus-producing countries are the Union of South Africa, Yugoslavia, Bulgaria, Hungary, and Rumania.

Exports of corn from the United States were very small until about 1850 when various events, both in this country and in Europe,

caused exports to increase rapidly. Exports of corn increased, except for a few years following the Civil War, until 1900 when a high record of 213,000,000 bushels were exported. Since that time exports of corn have been on the decline. In 1925 only 10,000,000 bushels were exported. A large part of our surplus goes to the United Kingdom, Germany, and the Netherlands. Cuba and Canada are also heavy purchasers.

A small percentage of the total corn exported goes out in the form of meal. In 1927 it equaled 11 per cent of the total exports of corn including meal, and has amounted to as much as 20 per cent. With the exception of 1918 and 1919 when exports of corn meal amounted to 2,019,000 barrels and 1,583,000 barrels, respectively, annual exports have always been less than 1,000,000 barrels. Until the beginning of the World War, imports of corn had been a negligible factor in our foreign trade, but at that time took on more important proportions. High prices in this country proved attractive to Argentine shippers with the result that from 1914 to 1921 imports ranged between 2,000,000 and 12,000,000 bushels annually. Most of these imports were received through the ports of New York and San Francisco. In addition to Argentina, small quantities are received from Mexico and the Dominican Republic.

Reexports are very small, the year 1921 being only one in which they amounted to more than 1,000,000 bushels.

Modern inventions and chemical analysis have greatly expanded the uses of corn and added to the value of the corn crop. A number of these products have become important factors in our foreign trade. Exports of glucose and grape sugar used to mix with sirups and in the production of such products as jams, jellies, and candy, have increased from a little over 13,000,000 pounds in 1883 to nearly 149,000,000 pounds in 1927. Only once since 1909 have we exported less than 100,000,000 pounds. Cornstarch, another corn product used in laundry work, in dressing and finishing textiles, in the manufacture of baking powder, and in toilet powders, is exported in heavy volume. Exports increased from 37,000,000 pounds in 1918 to 212,000,000 pounds in 1927, the peak of the export trade being reached in 1922 when foreign countries took 349,000,000 pounds. Exports of corn oil and corn-oil cake reached figures of considerable importance before the World War, but since then have shown decidedly downward tendencies. Such other corn products as hominy and grits, corn feeds, and "other corn preparations" are comparatively unimportant in our foreign trade.

SOURCES OF FOREIGN TRADE STATISTICS NOT MENTIONED IN CONNECTION WITH TABLES

1854-1866: "Imports from British North American possessions under the Reciprocity Treaty with Great Britain." For complete compilation for years 1854-1866 see Senate Executive Document No. 106, Thirty-third Congress, second session.

1861: See Tables 3 and 4 for exports of foreign merchandise under the act of March 3, 1857, also Tables 5 and 6 for exports of foreign merchandise under act of March 2, 1861. For imports under the act of March 3, 1857, see Tables 7 and 8, and Tables 9 and 10 for imports under the act of March 2, 1861. Figures under these two different acts should be added.

1860-1863: Commerce and Navigation for 1863, pages 660-661, for revised import figures for these years. Read introduction, pages 641-643.

1865: Commerce and Navigation of the United States, 1866, Tables 22, 23, and 24 for additional trade figures through New Orleans and San Francisco during the quarters ended December 31, 1864, March 31, and June 30, 1865, which were not included in the annual report of Commerce and Navigation for year ended June 30, 1865, as they were not received in time for publication.

1866: Commerce and Navigation of the United States, for 1867, Part II, Table 6, for imports through New Orleans and Paso del Norte during the three quarters ended December 31, 1865, March 31, 1866, and June 30, 1866, and through Puget Sound during the quarter ended June 30, 1866, which were not included in the annual report of Commerce and Navigation for the year ended June 30, 1866, as they were not received in time for publication.

1869-1895: See also tables listing "All other articles" and "All articles not enumerated."

EXPLANATION OF FOREIGN TRADE TERMS

Domestic exports are goods, produced or manufactured in this country from either domestic or imported raw materials, which are shipped to foreign countries. The kinds, quantities, and values of exported merchandise are ascertained from the shipper's export declarations filed by the exporters with the collector of customs at the port of exportation.

Include exports to the Philippine Islands and Virgin Islands of the United States. Since 1902, exclude shipments from continental United States to Alaska, Hawaii, and Porto Rico.

1790-1802: Includes reexports or exports of foreign merchandise.

Imports, general, embrace articles entered at the customhouses for immediate consumption and imported articles entered for warehouse. Include imports from the Philippine Islands and Virgin Islands of the United States. Since 1902, exclude shipments to the United States from Alaska, Hawaii, and Porto Rico.

Imports for consumption embrace articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption. The statement of general imports and the statement of imports entered for consumption for any period will always differ to the extent that the value of entries for warehouse for the period differs from the value of withdrawals from warehouse for consumption. The term "entry for consumption" is the technical name of the import entry made at the customhouse and implies that the goods have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion. Some of them may be afterward exported. Imports for consumption were first reported in 1867 and published in 1868.

Kinds, quantities, and values of imports of imported merchandise are ascertained from the entry filed by the importer at the customhouse.

The value of imported merchandise as shown in the statistical tables is the foreign value or the export value, whichever is higher; that is, the market value or the price at which the merchandise, at the time of exportation to the United States is offered for sale in the prin-

cipal markets of the country from which exported, including the cost of containers or coverings and all expenses incident to placing the merchandise in condition ready for shipment to the United States.

Reexports or exports of foreign merchandise represent goods which have been imported into this country either for reexport or consumption and are afterward exported, having undergone no change in form or condition or enhancement in value by application of labor in the United States.

1790-1802: Combined with domestic exports.

Net exports are domestic exports and reexports minus imports.

Net imports are imports minus domestic exports and reexports.

Average export value per unit has been computed by dividing the total export value each year by the total quantity and is not to be regarded as quotation of prices. The value upon which a given average in this table was based is composed of items which represent shipments possibly of different grades of the articles mentioned from different parts of the United States and at different seasons of the year. The actual value of any one shipment included in this total is its value at the time and place of exportation.

Conversions.—Corn meal converted to terms of grain on the basis that 1 barrel of meal is the product of 4 bushels of corn. The present milling rate is approximately 4.5 bushels of corn to 1 barrel of corn meal, depending on the grade of corn milled, but in earlier days, before the modern process of degerminating was in use, 1 barrel of corn meal was the product of 4 bushels of corn and this factor has been used in this historic presentation. One bushel of corn meal weighs 48 pounds and 1 barrel, 196 pounds.

Years.—The years end September 30, 1790-1842; 1843 is for nine months, October 1, 1842, to June 30, 1843; and the years end June 30, 1844-1923.

Weights.—A bushel of corn weighs 56 pounds; a bushel of corn meal, 48 pounds; a barrel of corn meal, 196 pounds.

Leaders indicate that no information exists but do not necessarily signify that there were no figures for that period as they may have been included with "all other" or with the "unenumerated."

Noncontiguous territory.—In the statistics of foreign commerce of the United States, the Philippine Islands, and Virgin Islands of the United States noncontiguous territory is treated as foreign countries.

The statistics of foreign commerce include the trade of the customs districts of Alaska, Hawaii, and Porto Rico with foreign countries but since 1902 do not include the trade of these territories with the United States.

In 1903, the trade with Alaska, Hawaii, and Porto Rico was for the first time fully and definitely recorded (see Commerce and Navigation of the United States, 1903, vol. 1, p. 31). Therefore separate tables have been compiled showing shipments from the United States to Alaska, Hawaii, and Porto Rico, 1903-1923.

The collection of statistics of trade with all noncontiguous territory was authorized by an act of Congress, April 29, 1902.

CORN STATISTICS

TABLE 1.—Corn: Acreage, production, farm value, and foreign trade of the United States, 1839, 1849, 1859, 1866-1923

Year	Acreage	Average yield per acre	Production	Farm value, Dec. 1		Foreign trade, including corn meal, year beginning July 1		
				Per bushel	Total	Domestic exports	Imports	Percentage of crop exported
1839			377,532			825		
1849			692,071			14,878		
1859			558,793			2,768		
1866	34,397	25.3	867,946	47.4	411,451	16,027	82	1.8
1867	32,520	23.0	768,320	47.0	437,770	12,494	69	1.6
1868	34,887	26.0	906,527	46.8	424,057	8,287	61	1.9

Compiled from records of the Division of Crop and Livestock Estimates. Figures in italics are census returns. United States acreage and production figures for 1870 and 1886-1903, were revised about 1912 and the figures adopted at that time are now accepted as the official figures for the United States as a whole and appear in this table. Revisions were based upon State revisions, but the revisions by States have never been published. These revisions affect also figures for stocks on farms over the same period.

¹ Corn meal not separately stated in "general imports" subsequent to the year beginning July 1, 1870. Figures for corn meal, 1871-1927, represent "imports for consumption."

² Preliminary.

TABLE 2.—Corn: Estimated acreage by States, 1866–1928

[In thousands of acres—i. e., 000 omitted]

Year	Maine	New Hampshire	Vermont	Mas-sach-sets	Rhode Island	Con-nec-ticut	New York	New Jersey	Penn-sylvania	Ohio	Indiana	Illinois	Michigan	Wiscon-sin	Minne-sota	Iowa
1866	49	41	45	69	15	67	845	220	1,042	2,625	3,498	4,932	504	333	-----	1,660

Compiled from records of the Division of Crop and Livestock Estimates. See general note on Table 1. The State figures shown in this table for 1879-1909, are the only State figures available for publication. The sum of these State figures over this period will not agree with the revised figures for the United States given in Table 1.

¹ Preliminary.

² Indian Territory included, 1901-1906.

³ Less than 500 acres.

⁴ The States of Nevada and Colorado included in "The Territories," 1877-1879.

Compiled from reports of the Division of Crop and Livestock Estimates. See general note on Table 1. The State figures shown in this table for 1879, 1889-1909, are the only State figures available for publication. The sum of these State figures over this period will not agree with the revised figures for the United States given in Table 1.

¹Preliminary.

⁴The States of Nevada and Colorado included in "The Territories," 1877-1879.

Compiled from reports of the Bureau of the Census.

- 1 Dakota Territory prior to Nov. 2, 1889.
- 2 Virginia includes West Virginia through 1859.
- 3 Includes Indian Territory.
- 4 Less than 500 bushels.

66021°-30-3

TABLE 8.—Corn: Percentage production in the principal producing States, average, 1921-1925

State	Average annual production as a percentage of United States total		Cumulative percentage	State	Average annual production as a percentage of United States total		Cumulative percentage
	Average annual production, 1921-1925	Average annual production as a percentage of United States total			Average annual production, 1921-1925	Average annual production as a percentage of United States total

Compiled from records of the Division of Crop and Livestock Estimates. Value 1866-1878 reduced to gold basis. Value per acre not reported prior to 1913. See general note on Table 1. The State figures shown in this table for 1879, 1889-1900, are the only State figures available for publication. The sum of these State figures over this period will not agree with the revised figures for the United States given in Table 1.

¹ Preliminary.

² Indian Territory included, 1901-1906.

³ The States of Nevada and Colorado included in "The Territories," 1877-1879.

CORN STATISTICS

TABLE 12.—Corn: Acreage, production, and yield per acre in Argentina, 1895-1927

Year ¹	Acreage planted	Production	Yield per acre planted	Year ¹	Acreage planted	Production	Yield per acre planted
	1,000 acres	1,000 bushels	Bushels		1,000 acres	1,000 bushels	Bushels
1895	3,074	88,184	28.7	1912	9,484	196,042	20.8
1896	3,459			1913	10,280	263,135	25.6
1897	2,471			1914	10,380	325,178	31.3
1898	2,400	69,925	31.9	1915	9,928	161,133	16.2
1899	2,493	55,511	22.3	1916	8,069	53,839	6.6
1900	3,103	98,841	31.9	1917	8,715	170,660	10.6
1901	3,474	84,018	24.2	1918	8,252	224,230	27.2
1902	4,452	145,946	33.5	1919	8,184	258,686	31.6
1903	5,180	175,187	33.8	1920	8,090	330,420	28.5
1904	5,051	149,707	24.9	1921	7,343	176,171	24.0
1905	6,714	194,910	29.0	1922	7,851	176,103	22.4
1906	7,046	71,768	10.2	1923	8,489	276,756	32.6
1907	6,719	136,053	20.2	1924	0,162	186,298	20.3
1908	7,349	175,155	24.1	1925	10,618	279,510	26.3
1909	7,425	175,187	23.6	1926	10,599	320,853	30.3
1910	7,045	27,678	3.5	1927	10,739	305,691	28.5
1911	8,456	293,849	35.0				

Compiled from Argentine official sources.

¹ Corn planted in the fall of the year shown, and harvested in the spring of the following year.

Northern and Southern Hemisphere total, all countries reporting area and production all years through 1927.....	3,679,826	3,898,274	3,500,692	4,063,148	3,477,179
Estimated world total, excluding Russia.....	4,126,000	4,315,000	4,240,000	4,519,000	3,872,000

Official sources and International Institute of Agriculture. Figures refer to the crop harvested in the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Where changes in boundary have occurred, the averages reported are estimates for the crop within present boundaries.

² 2-year average.

³ 1 year only.

⁴ 4-year average.

⁵ The estimate for the 5-year period, 1909-1913, given in this table is somewhat larger than the figure obtained by averaging the same 5-year period in Table 16. This is because in the detailed table estimates for warring countries are for post-war boundaries, whereas in Table 16 they are for pre-war territory. As a result in excluding Russia which lost territory in the war, a smaller area is excluded in the detailed table than in Table 16.

⁶ Includes some sorghum.

Bureau of Agricultural Economics, official sources, and International Institute of Agriculture. For each year is shown the production during the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Includes all Russian territory reporting for the years shown.

² Total Russian Empire exclusive of the 10 Vistula Provinces of Russian Poland and the Province of Batum in Transcaucasia.

³ Exclusive of Russian Poland, Lithuania, parts of present Latvia and the Ukraine, and the Provinces of Batum and Elizabetopol in Transcaucasia.

⁴ Beginning this year estimates within present boundaries of the Union of Socialist Soviet Republics, exclusive of Turkestan, Transcaucasia, and the Far East, which territory in 1924 produced 26,048,000 bushels.

⁵ Production in present boundaries, beginning this year, therefore not comparable with earlier years.

⁶ Preliminary.

CORN STATISTICS

¹ State average yields obtained by the Division of Crop and Livestock Estimates and published in the Yearbooks of the U. S. Department of Agriculture, carried to nearest whole number.

² Includes miscellaneous labor, irrigating, and water.

³ Sacks and twine, crop insurance, use of implements, use of storage buildings, and overhead.

⁴ Included in total for specified years. (See explanation given in footnote 6.)

TABLE 20.—Corn: Cost of production, by States, 1922-1927—Continued

Rearranged from reports of the Division of Farm Management and Costs.

¹Included in total for specified years. (See explanation given in footnote 6.)

²Not reported.

³Including records from States in which there were not enough reports to show State averages, as follows: 1922, 40 records from New Hampshire, Rhode Island, Connecticut, Delaware, Arizona, Utah, Washington, Oregon, and California; 1923, 55 records from Maine, New Hampshire, Arizona, Utah, and California; 1924, 91 records from Maine, New Hampshire, Massachusetts, Rhode Island, Utah, Washington, and California; 1925, 68 records from Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, Utah, and California; 1926, 60 records from Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, Utah, Idaho, Washington, and Oregon; 1927, 63 records from Maine, Vermont, Massachusetts, Rhode Island, Connecticut, Florida, Utah, Idaho, Washington, Oregon, and California.

TABLE 21.—Corn: Cost of production, by yield groups, 1923-1927

1923

Yield group (bushels per acre)	Re-ports	Average acreage in corn per farm	Average yield per acre	Gross cost per acre to—										Credit per acre (stover and fodder)	Net cost	
				Prepare and plant	Cultivate	Harvest	Market	Miscellaneous labor ¹	Fertilizer and manure	Seed	Land rent	Miscellaneous costs ²	Total		Per acre	Per bushel

5.....	47	21.5	6	10	1.0
6.....	44	23.0	7	15	3.0
Sample.....	Sample grade shall be white corn or yellow corn or mixed corn, respectively, which does not come within the requirements of any of the grades from No. 1 to No. 6, inclusive, or which has any commercially objectionable foreign odor, or is heating, hot, or is otherwise of distinctly low quality.				

Department of agricultural Handbook of Official Grain Standards as revised January, 1928.
 The corn in grades Nos. 1 to 5, inclusive, shall be cool and sweet.
 The corn in grade No. 6 shall be cool, but may be musty or sour.

Grain Futures Administration. Revised to Mar. 1, 1927. Zero (0) denotes grades deliverable at contracts prices. Plus (+) denotes grades deliverable at premium over contract prices. Minus (-) denotes grades deliverable at discount under contract prices.

¹ Provided that No. 4 corn can be delivered only during the months November, December, January, and February.

² Provided that No. 3 white corn, No. 3 yellow corn, and No. 3 mixed corn can not be delivered during the months of March, April, and May, except at 4 cents per bushel discount under the contract prices.

³ Provided that No. 4 corn of the new crop can be delivered only during the months of November, December, January, and February. Provided further, that in no case shall more than 25 per cent of No. 4 corn be applied on contract during any time of the year.

Compiled from reports of the Division of Crop and Livestock Estimates. United States totals for stocks on farms were revised, 1897-1910, due to revisions of United States production. The sums for State figures over this period will not agree with these totals. See general note, Table 1.

¹ Based on reported percentage of entire crop on farms, proportion merchantable, and percentage shipped out of county where grown.

² 1900-10 to 1920-21, quality reported as a percentage of a high medium grade; 1921, percentage of merchantable quality.

³ Represents the crop plus stocks on farms Nov. 1.

⁴ Not published.

Estimated percentage of crop on farms on Nov. 1, applied to estimated equivalent production for all purposes (grain, silage, forage, and grazing). Compiled from reports of the Division of Crop and Livestock Estimates. See general note on Table 1. The State figures shown in this table for 1897-1910 are the only State figures available for publication. The sum of these State figures over this period will not agree with the revised figures for the United States given in Table 32.

¹ Less than 500 bushels.

² Includes Indian Territory.

Estimated percentage of crop on farms on Mar. 1, applied to estimated equivalent production for all purposes (grain, silage, forage, grazing). Compiled from records of the Division of Crop and Livestock Estimates. See general note on Table 1. The State figures shown in this table for 1983-1910, are the only State figures available for publication. The sum of these State figures over this period will not agree with the revised figures for the United States given in Table 32.

† Includes Indian Territory.

¹ 1918, 1920, 1922, 1924, and 1926 are census figures for calendar year following; figures for other years are straight-line interpolations except 1927, which is a continuation of the 1926 census figure.

² 1915-1919, estimated from monthly average figures; all other years as reported for the year beginning November.

³ Treasury Department, Bureau of Internal Revenue, fiscal year.

⁴ Seed requirements for acreage of following year, 9.5 pounds per acre.

¹ No reexports reported prior to 1867.

² No imports reported prior to 1868.

³ No imports prior to 1802. General imports 1862-1871; imports for consumption 1872-1927.

⁴ Incomplete; quantity not reported for corn meal, valued at \$8.

⁵ Incomplete; quantity not reported for corn, valued at \$30.578.

⁶ Incomplete; quantity not reported for corn meal, valued at \$94.

⁷ Reports also show reexports of 461 barrels of corn meal.

⁸ Includes reexports of 461 barrels of corn meal.

CORN STATISTICS

TABLE 48.—Corn, corn meal, and corn, including meal in terms of grain: Quantity of domestic exports, imports, reexports, and net exports of the United States, 1858-1928—Continued

Year ended—	Domestic exports			Imports			Reexports	Net exports	
	Corn	Corn meal	Corn, including meal in terms of grain	Corn	Corn meal	Corn, including meal in terms of grain	Corn	Corn	Corn, including meal in terms of grain

Compiled from Commerce and Navigation of the United States, 1858-1917; Foreign Commerce and Navigation of the United States, 1918-1927; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-1926; January, June, and December issues, 1927-28; and official records of the Bureau of Foreign and Domestic Commerce.

1 No imports reported prior to 1858.

2 No imports prior to 1862, general imports 1862-1871; imports for consumption 1872-1927.

3 No reexports reported prior to 1867.

4 Reports also show reexports of corn meal valued at \$3,399.

5 Includes reexports of meal valued at \$3,399.

6 Imports for consumption.

7 Net imports.

TABLE 50.—Corn, corn meal, and corn including meal in terms of grain: Domestic exports from the United States, by months, 1910–1929

Item and year ended June 30	July	August	September	October	November	December	January	February	March	April	May	June	Total

Compiled from Commerce and Navigation of the United States, 1872-1917; Foreign Commerce and Navigation of the United States, 1918, and Monthly Summary of Foreign Commerce of the United States, June issues, 1919-1928, and official records of the Bureau of Foreign and Domestic Commerce.

¹ Domestic exports not reported prior to 1881. For 1878 and 1879, stated in the original returns as "grape sugar"; 1882 and 1883, as "glucose (grape sugar)". For 1880 stated as glucose, 2,085,800 pounds valued at \$103,771; and grape and maple sugar, \$171,277; 1881 glucose 821,957 pounds valued at \$28,587 and grape sugar 12,438,247 pounds valued at \$122,838.

² Imports not reported prior to 1872. General imports 1872-1893; imports for consumption 1894-1918. Glucose and grape sugar reported separately after 1907. Reexports not reported.

³ Reported in value only.

⁴ Net imports.

¹ No exports of corn meal reported prior to 1911. No imports of corn reported prior to 1905.

² These data can not be treated as comparable, owing to changes of frontiers during the period under review.

³ Corn only; corn meal not separately reported but included with "Other meal and flour."

⁴ On May 31, 1910, the self-governing colonies of the Cape of Good Hope, Natal, Transvaal, and the Orange River Colony were united in a legislative union under one government under the name of the Union of South Africa.

⁵ Net imports.

⁶ Less than 500 bushels.

⁷ 9 months.

⁸ No reports.

Rearranged from records of the Division of Crop and Livestock Estimates. Number of bushels of corn required to buy 100 pounds of live hogs, based on averages of farm prices of corn and hogs for the month. Published monthly in Crops and Markets.

¹ States under this division not shown separately.

² North Central division includes Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas.

³ South Atlantic division includes Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida.

⁴ South Central division includes Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas.

* Prices January-December, 1871, from Bartol's Redbook, 1885.

Compiled from annual reports of the Chicago Board of Trade. Monthly prices are averages of the weekly prices of cash prices. January, 1858-December, 1860, based on prices of No. 1 and No. 2 corn; January, 1861-August, 1863, the range of mixed corn is used; Sept. 1, 1863-Mar. 31, 1867, No. 1 corn was used except for some weeks in period, December-March, 1864-65, when quotations cover "rejected" corn only. The proportion of corn received in each grade varied widely. The prices used cover representative grades. The price of No. 2 corn was taken Apr. 1, 1867-Mar. 31, 1868; No. 1 corn Apr. 1, 1868-Mar. 31, 1869; thereafter No. 2 corn. Prices from January, 1892, are given for corn in store.

Data for December, 1886-December, 1921, taken from office records of the Federal Trade Commission as compiled from annual reports of the Chicago Board of Trade except quotations in May, 1893-1903, which were compiled from the Chicago Daily Trade Bulletin. Data January, 1922-October, 1928, compiled by the Division of Statistics and Historical Research from annual reports of the Chicago Board of Trade; and November and December, 1928, from the Chicago Daily Trade Bulletin.

Beginning November, 1928, prices are monthly average closing prices, which are approximately the same as the average of the daily high and low prices.

- ¹ Quotations were scattered.
- ² No quotations for first six days of month.
- ³ Quotations for first 11 days of trading only.
- ⁴ Quotations for the last half of month only.
- ⁵ No quotations for last eight days of trading.
- ⁶ No quotations for the first five days of trading.

Compiled from St. Louis Daily Market Reporter. Average of daily quotations.

¹ January, 1909, to Nov. 28, 1916, grits, hominy, and pearl meal; Nov. 29, 1916, to Mar. 2, 1917, grits and hominy; Mar. 3, 1917, to date, cream meal. Quotations, 1909 to Apr. 3, 1918, were given per barrel in wood and converted to 100-pound basis by deducting 20 cents for the price of the barrel (30 cents in 1917 when price was higher), and using 190 pounds per barrel.
