INTRODUCTION

This bulletin presents forest-products statistics for seven Central States and five States in the Prairie region. As far as possible the State figures are given separately, in convenient form for those who are especially interested in the economic development of each State and in the significance of the various industries and forest resources in relation to such development. Although there are extensive gaps

¹ From basic data gathered in cooperation with the Bureau of the Census, United States Department of Commerce, and the Dominion Bureau of Statistics.

in the information presented and some data are unavoidably incomplete, the tabulations are a compilation from all known records and sources of information as well as a complete summary of the published data. As such, they furnish the best available indications, by States, of trends in production, distribution, consumption, and prices of important forest products.

Originally, the Central States region was heavily forested in the eastern and southern portions. About four-fifths of the timber was hardwood, much of which was of the finest quality and some of which attained great size. From northwestern Indiana westward through Illinois and southwestward through Missouri, prairies dominated large areas, and in Kentucky grass-covered barrens were extensive and treeless. Smaller included prairies were found as far east as central Ohio.

The Prairie States were characterized by vast areas of grass-covered land and in the westerly portions by sage-covered plains. In southwestern South Dakota (Black Hills) are mountainous areas with a forest cover of ponderosa pine, the easternmost extension of western commercial saw timber. In eastern and southeastern Iowa timber occurred in bodies of considerable extent, consisting largely of fine walnut, sycamore, oak, and numerous other hardwoods. Limited commercial stands of white pine in the northeastern part of the State, and of eastern redcedar more widely scattered, were lumbered long ago. Elsewhere throughout the region, as in the Dakotas, Nebraska, and Kansas, were strips of hardwood, principally cottonwood, along the watercourses.

While the two regions are somewhat similar in total land area, the Central States had 10 to 15 times as much timber as the Prairie States, which are consumers rather than producers of timber commodities.

In order to prevent unlawful disclosures it has been the custom of the Bureau of the Census to publish figures combining the products of two or more States in which there are only a few reporting agencies. The effect is to lessen the number of tables which can be presented for the individual Prairie States, even in respect to lumber production. The cut of Nebraska is thus combined in some years with Kansas and in others with Iowa. In 1925, 1926, and 1927 Kansas was combined with Iowa. After the lapse of years it is not feasible to separate these combined reports. North Dakota reported hardwood lumber production of 2 million feet in 1899. Previous to that year there is no dependable record, and no production or distribution has been reported in succeeding years.

For census reasons also the statistics of pulpwood, wood pulp, and paper for many States cannot be shown separately. The Prairie States have no mills which consume pulpwood and produce wood pulp. Of the Central States, only Ohio, Tennessee, and West Virginia are active in the wood-pulp industry. So few plants are engaged that the latest State record afforded by the census is that of Tennessee in 1931, when the State consumed 95,193 cords of pulpwood. Satisfactory tables for pulpwood consumption and wood-pulp production are thus not feasible. All of the States in these regions except the Dakotas and Nebraska do manufacture paper, however, and for that reason a national table of paper production is included giving the available data for all States.

The aggregate cut of lumber from 1900 to 1935 has been estimated as follows for the two regions:

| | Million board feet |
|-----------------|-----------------------|
| Central region: | |
| Softwood..... | 52, 000 |
| Hardwood..... | 218, 000 |
| Total..... | <u>270, 000</u> |
| Prairie region: | |
| Softwood..... | 20, 900 |
| Hardwood..... | 6, 100 |
| Total..... | <u>27, 000</u> |

¹ The Prairie softwood includes 10,750 million board feet of white pine, sawed in Iowa from logs which grew in the Lakes States, and 1,300 million feet of ponderosa pine from South Dakota.

The Central region ranks fourth in aggregate lumber production, being surpassed only by the Lakes States, Lower Mississippi, and North Pacific regions. It has produced more than 40 percent of all the hardwood lumber sawed in the United States.

It will be observed that some of the lumber production tables show white pine, hemlock, spruce, and larch in States which did not have these woods in their forests or at least had them only in small quantities. This is because the census of manufactures records lumber production in the State where the sawing occurs, regardless of the source of the logs. In Illinois (table 2) the heavy cut of white pine in earlier years came, at least in large part, from logs grown in Wisconsin and Minnesota. Yellow pine also was largely from logs shipped into the State. In Indiana (table 3) the white pine, spruce, and part of the hemlock lumber must have been sawed from logs grown in Michigan or Wisconsin. The yellow pine probably was from Kentucky or Tennessee. The white pine and larch reported from Missouri (table 5) could have had no other original source than the Lake States. In Ohio (table 6) the spruce, much of the white pine and hemlock, and probably some of the larch were sawed from logs which grew either in Michigan, or in Pennsylvania, West Virginia, or Canada. Almost all of the white pine sawed in Iowa (table 9), and all of the hemlock, larch, and spruce came from the upper Mississippi and its tributaries in Wisconsin and Minnesota. Why these softwoods were sawed so far from the stump is discussed later.

Hardwood distillation is of considerable importance in Tennessee, and less so in West Virginia, Kentucky, and Missouri. But since the industry is not of outstanding importance in the Central States as a whole, and there is no development in the Prairie States, and no data by States in either region are available since 1929, a satisfactory distillation table cannot be provided.

The average annual prices of standing timber (stumpage) and of logs intended primarily for the manufacture of lumber, as given in tables 36 and 37, are the best existing indexes of market trends. Each entry is a weighted average from which the prices of the individual transactions included may show considerable variation. Prices for some species and in some States are unavoidably fragmentary for some years. The variation in prices for the 15-year period for which price data are given is no greater than might be expected in view of the great variation in quality and accessibility, as well as the knowledge of values on the part of both purchaser and seller.

Fuel wood, posts, hewed ties, mine timber, poles and piling, and cordwood used for distillation, tanning extract, and excelsior accounted for 64 percent of the estimated average annual timber cut of 1,947 million cubic feet in the Central States for the period 1925-29, and for 88 percent of the total cut of 122 million cubic feet during the same period in the Prairie States. Periodic records of cut for these products are not available by States. Total fuel-wood consumption from earliest settlement to 1930 is estimated for the two regions in tables 48 and 49.

Damage by fire, disease, and insects amounted to 196 million cubic feet annually during 1925-29, practically all of which was in the Central region.

Comparison of the aggregate lumber production estimate previously shown with the estimates of fuel-wood consumption (tables 48, 49) shows that more native saw timber was burned as fuel than ever was sawed for lumber in the Prairie States. Similarly in the Central States region, the aggregate saw timber used for fuel far exceeded the lumber cut. There was ample hardwood for fuel but relatively little softwood for lumber.

It is probable also that in the Central States the saw timber felled in clearing land and not utilized exceeded the lumber cut. Extensive destruction of timber in clearing was inevitable. The percentage of hardwoods in the original stand was very heavy, and notwithstanding their fine quality, the great quantities that encountered the agricultural soils could not all be marketed.

In both Central and Prairie States the lumber consumed has greatly exceeded the lumber produced at all periods since the Civil War (figs. 1 and 2). This and the sawing of species alien to these regions are explained by the condition already indicated, namely, that neither region grew softwoods in sufficient quantity and availability for its needs. In many parts of the Prairie States there never was sufficient timber, even of hardwoods. Softwoods were strongly preferred for all sorts of building construction and fencing. That demand opened a market for softwood lumber which began in a minor way before the Civil War, grew to its peak about 1900-10, and continues in diminished volume to the present time, a period of nearly 100 years. During the first 60 years of that period a very large part of the needed softwood was brought into these regions in the form of logs floated down the Mississippi and Ohio rivers, and over the waters of Lake Michigan and Lake Erie.

Beginning in 1839, great log rafts floating down the Mississippi, steered by long oars or sweeps, were no uncommon sight. Ordinarily a log raft included upward of 1 million feet, but the largest of record, 270 feet wide and 1,550 feet long, carried from Lynxville, Wis., to Rock Island, Ill., in 1906 2¼ million feet of logs. The charge for rafting from West Newton to Davenport or Rock Island was \$1.10 per thousand feet. These rafts served busy sawmills in a score of river towns in Iowa, Illinois, and Missouri. Frederick Weyerhaeuser, then operating a mill at Rock Island, Ill., is credited with having been the first man to utilize steam power in rafting on the Mississippi. About 1869 powerful tugs and river steamers were used to tow or push the rafts down the river.

The total output of Lake States logs into the Mississippi between 1830 and 1914 was about 32 billion feet log scale, as compiled from

FIGURE 1.—Lumber cut and consumption in the Central region, 1839-1936.

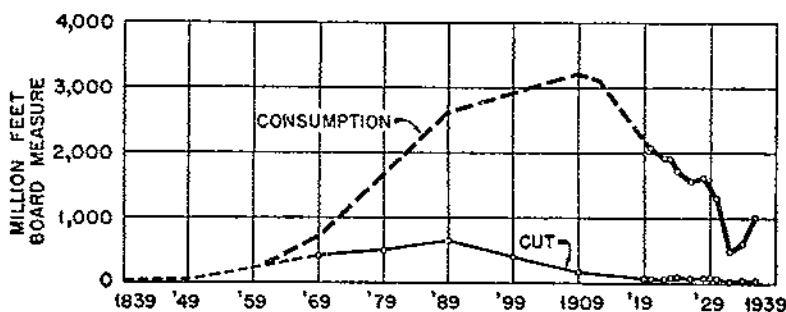

FIGURE 2.—Lumber cut and consumption in the Prairie region, 1839-1936.

records of the surveyor general of logs and lumber at St. Paul, Minn., and from archives of the State historical societies of Minnesota and Wisconsin.² Practically all the logs rafted were white pine of high quality, and about three-fourths came from Wisconsin. The estimated aggregate production of lumber from these logs, given in table 1, is based on records of the Bureau of the Census and Forest Service estimates of production previous to 1899.

TABLE 1.—Pine lumber sawed from logs rafted down the Mississippi River, 1850-1914

(In million feet b. m., i. e., 000,000 omitted)

| Decade | Illinois | Iowa | Missouri | Total | Decade | Illinois | Iowa | Missouri | Total |
|--------------|----------|-------|----------|-------|--------------|----------|--------|----------|--------|
| 1850-59..... | 15 | | | 15 | 1890-99..... | 1,205 | 4,085 | 1,085 | 6,445 |
| 1860-69..... | 465 | 25 | 10 | 410 | 1900-04..... | 460 | 1,400 | 270 | 2,130 |
| 1850-59..... | 1,075 | 676 | 345 | 2,095 | 1905-09..... | 140 | 875 | | 1,015 |
| 1860-69..... | 1,300 | 2,010 | 1,020 | 4,330 | 1910-14..... | | 200 | | 200 |
| 1870-79..... | 1,400 | 3,125 | 1,335 | 5,860 | Total..... | 7,535 | 11,750 | 5,265 | 20,550 |
| 1880-89..... | 1,445 | 4,375 | 1,200 | 7,020 | | | | | |

¹ Includes 50 million feet of hemlock.

From the census record it is also estimated that the production of shingles on the Mississippi amounted to 8,310 million pieces, of which 5,530 million were made in Iowa and 1,390 million each in Illinois and Missouri. The volume of shingles is equivalent to 831 million board feet. Lath were also produced in proportionately large quantities.

Part of the logs may have been sawed in southern Minnesota or Wisconsin. Possibly 5 percent were lost through rafting accidents or by sinking, and it is probable that not all the lumber cut was reported. Considering also the probable overrun of lumber, the combined quantity of lumber and shingles shows close agreement with the quantity of logs put into the Mississippi.

Indiana and Ohio also sawed white pine grown elsewhere. The totals for the Central States region by decades, in million board feet, including the two States already recorded, are:

| | |
|---------------|--------|
| Illinois..... | 7,535 |
| Indiana..... | 1,345 |
| Missouri..... | 5,265 |
| Ohio..... | 1,875 |
| Total..... | 16,020 |

To this total production of pine lumber from logs grown outside these four Central States may be added 165 million feet of imported hemlock logs sawed in Ohio. The shingle production from Lake States logs may have amounted to 4,500 million pieces, equivalent to 450 million feet additional.

 HORTON, GEORGE W. HISTORY OF THE LUMBER AND FOREST INDUSTRY OF THE NORTHWEST. Chicago. 734 pp. 1906.

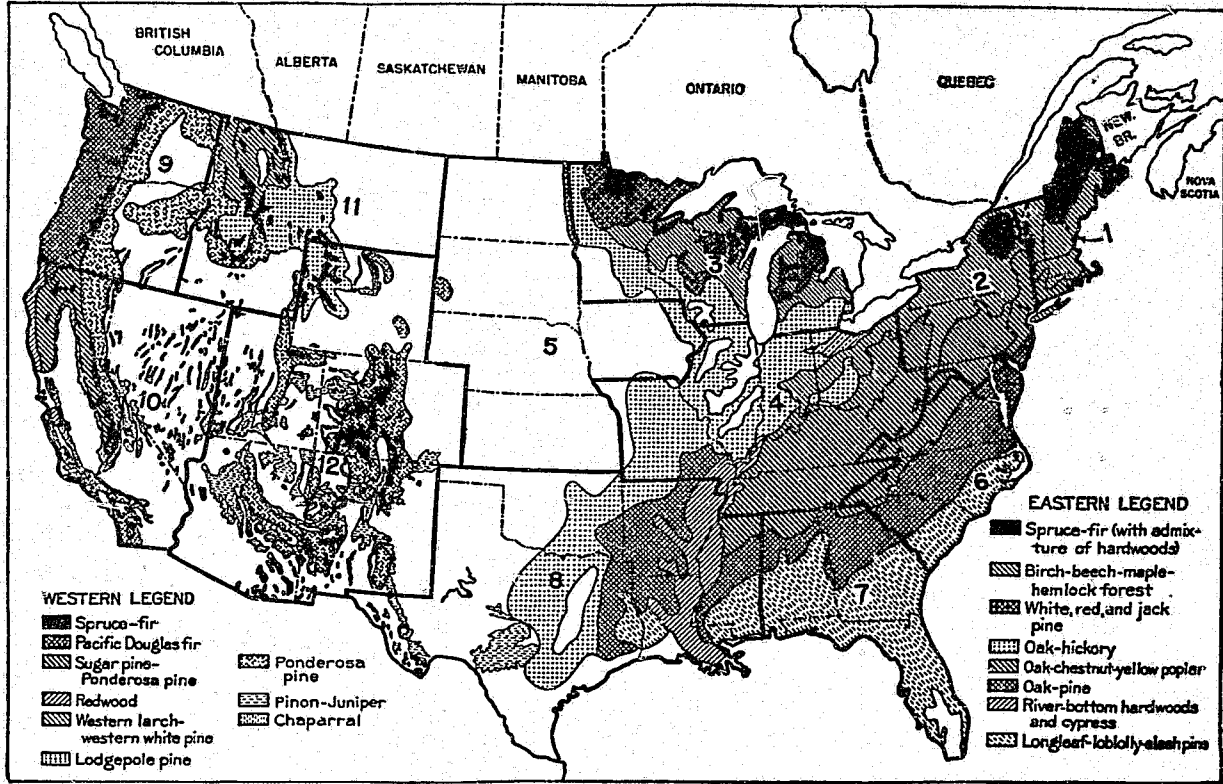

FIGURE 3.—Principal forest types of the United States and regions used in forest-products statistics.

The rafted logs alone, however, were not sufficient to supply the demand for building material arising from the settlement of the prairies of Iowa, Illinois, Missouri, Kansas, and Nebraska. Sawed lumber, shingles, and lath also came down the Mississippi in enormous quantities, sometimes as top loads on the log rafts, sometimes as rafts made up exclusively of lumber and timbers. This treatment did not improve the lumber, but it served until the railroads could carry the burden.³ The largest lumber raft went from Stillwater, Minn., to St. Louis in 1915. It was 270 feet wide, 1,450 feet long, 26 courses deep, and with its top load contained 9 million feet of sawed material.

Statistics of lumber production and lumber prices at the mill are derived from bulletins of the Bureau of the Census and the Forest Service, which have cooperated continuously since 1920. That cooperation has greatly facilitated the work of the Forest Service in gathering statistics of stumpage and log prices and of lumber distribution. Essential information in regard to the lumber distributed from Canadian Provinces to States has been provided by the Dominion Bureau of Statistics through cooperation established in 1928.

This presentation of Central and Prairie States statistics is the last in a series of six regional bulletins covering the entire United States. The different geographic divisions or regions covered by these publications, as listed below, are shown in figure 3 in relation to the principal forest types.

| <i>Statistical Bulletin</i> | <i>Region</i> |

³ Following the Civil War the extension of railroads facilitated the transportation of sawed softwood lumber from other regions, first from the great merchant mills of the Lakes States, then from the South, and finally from the Far West. In the decade 1920-29 Iowa alone received 5,600 million feet of softwood lumber from States outside the Prairie region.

¹ No published census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufactures, are given below in million feet board measure. The quantities for 1889 include the estimated production of custom mills.

| Kind of wood | 1860 | 1870 | 1889 |
|-----------------------|------|------|------|
| White pine..... | 125 | 169 | 129 |
| Yellow pine..... | 5 | 3 | 2 |
| Other softwood..... | 2 | 2 | 2 |
| Gum, red and sap..... | 2 | 4 | 10 |
| Oak..... | 91 | 120 | 57 |
| Yellow poplar..... | 15 | 23 | 20 |
| Other hardwood..... | 6 | 18 | 10 |
| Total..... | 246 | 334 | 230 |

² Reported as gum.
³ Reported as poplar.
⁴ Includes 2 M feet of chestnut.
⁵ U. S. Department of Agriculture Bulletin 1119, table 4, shows a larger total including the estimated cut of nonreporting mills.
⁶ Not separately shown.
⁷ No data collected.

TABLE 3.—Lumber production, Indiana, by kind of wood, 1899, 1904-38¹

¹ No published Census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufactures, are given below in million feet board measure. The quantities for 1889 include the estimated production of custom mills.

| Kind of wood | 1869 | 1879 | 1889 | Kind of work | 1869 | 1879 | 1889 |
|-----------------------|------|------|-------|---------------------|------|------|------|
| White pine..... | 20 | 50 | 15 | Oak..... | 415 | 690 | 690 |
| Yellow pine..... | 3 | 2 | ----- | Yellow poplar..... | 78 | 60 | 70 |
| Other softwood..... | 3 | 4 | ----- | Other hardwood..... | 105 | 85 | 83 |
| Gum, red and sap..... | 2 | 5 | 10 | | | | |
| Maple..... | 30 | 20 | 25 | Total..... | 650 | 916 | 893 |

² Reported as gum.

³ Reported as poplar.

⁴ U. S. Department of Agriculture Bulletin 1119, table 4, shows a larger total including the estimated cut of nonreporting mills.

⁵ Not separately shown.

⁶ No data collected.

¹ No published Census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufactures, are given below in million feet board measure. The quantities for 1889 include the estimated production of custom mills.

² Reported as gum.

³ Reported as poplar.

⁴ U. S. Department of Agriculture Bulletin 1119, table 4, shows a larger total including the estimated cut of nonreporting mills.

⁵ Not separately shown.

⁶ No data collected.

¹ No published Census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufactures, are given below in million feet, board measure. The quantities for 1889 include the estimated production of custom mills.

| Kind of wood | 1869 | 1879 | 1889 | Kind of wood | 1869 | 1879 | 1889 |
|----------------------|------|------|------|---------------------|------|------|------|

¹ No published Census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufacturers, are given below in million feet board measure. The figures for 1889 include the estimated production of custom mills.

² Reported as gum.

³ Reported as poplar.

⁴ U. S. Department of Agriculture Bulletin 1119, table 4, shows a larger total including the estimated cut of nonreporting mills.

⁵ Not separately shown.

⁶ No data collected.

¹ No published Census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufactures, are given below in million feet broad measure. The quantities for 1889 include the estimated production of custom mills.

| Kind of wood | 1869 | 1879 | 1889 |
|------------------|------|------|------|
| Cypress | | 2 | 2 |
| White pine | | 1 | 2 |
| Yellow pine | 35 | 32 | 32 |
| Other softwood | 20 | 22 | 16 |
| Gum, red and sap | | 2 | 5 |
| Maple | | 1 | 2 |
| Oak | 100 | 142 | 276 |
| Yellow poplar | 40 | 90 | 150 |
| Other hardwood | 10 | 11 | 12 |
| Total | 205 | 303 | 497 |

- ² Reported as gum.
- ³ Reported as poplar.
- ⁴ U. S. Department of Agriculture Bulletin 1119, table 4, shows a larger total including the estimated cut of nonreporting mills.
- ⁵ Not separately shown.
- ⁶ No data collected.
- ⁷ Data not available.

TABLE 8.—Lumber production, West Virginia, by kind of wood, 1899, 1904-38¹

| Kind of wood | 1899 (929 mills) | 1904 (620 mills) | 1905 (285 mills) | 1906 (652 mills) | 1907 (1,044 mills) | 1908 (1,044 mills) | 1909 (1,524 mills) | 1910 (1,069 mills) | 1911 (994 mills) | 1912 (961 mills) | 1913 (678 mills) | 1914 (913 mills) |

¹ No published Census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufactures, are given below in million feet board measure. The quantities for 1889 include the estimated production of custom mills.

| Kind of wood | 1869 | 1879 | 1889 |
|---------------------|------|------|------|
| Hemlock..... | 2 | 9 | 20 |
| Spruce..... | 2 | 10 | 20 |
| White pine..... | 2 | 3 | 5 |
| Yellow pine..... | 30 | 40 | 25 |
| Other softwood..... | 4 | 5 | 10 |
| Maple..... | | 1 | 3 |
| Oak..... | 20 | 69 | 131 |
| Yellow poplar..... | 14 | 40 | 100 |
| Other hardwood..... | 2 | 3 | 5 |
| Total..... | 76 | 180 | 319 |

- ² Reported as gum.
- ³ Reported as poplar.
- ⁴ U. S. Department of Agriculture Bulletin 1110, table 4, shows a larger total including the estimated cut of nonreporting mills.
- ⁵ Not separately shown.
- ⁶ No data collected.

¹ No published Census data by kind of wood previous to 1899. Forest Service estimates of lumber production for earlier years, based on the State totals of the Census of Manufactures, are given below in million feet, board measure. The quantities for 1889 include the estimated production of custom mills.

² U. S. Department of Agriculture Bulletin 1119, table 4, shows a larger total, including the estimated cut of nonreporting mills.

³ Not separately shown.

⁴ No data collected.

| Kind of wood | 1869 | 1879 | 1889 |

¹ Figures in parentheses in box heads show number of establishments reporting.

² Alabama, Arkansas, Colorado, District of Columbia, Mississippi, North Dakota, South Carolina, Texas, and Utah are included in "All other States" for all the years of record.

³ Included in "All other States."

⁴ Groups of States: Alabama, Arkansas, Georgia, South Carolina, Texas, boards, 32,000 tons; Colorado, Iowa, Kansas, Missouri, boards, 109,402 tons; Alabama, Arkansas, Mississippi, wrapping-papers, 87,691 tons; District of Columbia, Georgia, South Carolina, Texas, wrapping papers, 16,644 tons; District of Columbia, Rhode Island, Texas, other papers, 31,635 tons.

⁵ Groups of States: Alabama, Arkansas, Georgia, South Carolina, Texas, boards, 28,725 tons; Colorado, Iowa, Kansas, Missouri, boards, 94,682 tons; Alabama, Arkansas, Mississippi, wrapping papers, 104,361 tons; District of Columbia, Georgia, South Carolina, Texas, wrapping papers, 10,159 tons; District of Columbia, Rhode Island, Texas, other papers, 24,690 tons.

⁶ Includes 11,792 tons of bags.

⁷ Includes 798,267 tons reported from unspecified Southern States.

¹ Based on population and a variable per capita consumption, of which the earliest record, in 1879, shows 3.1 cords.

² Estimated cords taken from saw timber trees converted at 340 board feet per cord, declining after 1900 to 215 feet in 1930.

³ A approximate hardwood component at 60 percent of total, declining after 1910 to 75 percent in 1930.
