WAGE AND JOB PRICES
FOR THE CALIFORNIA WORKER

1963

State Department of Finance
Division of Labor Statistics

PUBLICATION at this time of the information in a series of annual records of stumpage and log prices, is regarded as the most expeditious means of satisfying instant demands from a large number of governmental and nongovernmental agencies, individual, and corporations for authentic and comprehensive information on prices of standing timber and logs. It is evident that the interest in and need for the data given in this annual compilation, have been greatly accentuated by the wartime demands, including the establishment of price ceilings on lumber, logs, and other forest products, and the prospect of additional ceilings.

The material here presented constitutes an important source of evidence as to current timber values. These data are nowhere else obtainable in this comprehensive form.

UNITED STATES DEPARTMENT OF AGRICULTURE
STATISTICAL BULLETIN NO. 80

WASHINGTON, D. C.

January, 1945

**STUMPPAGE AND LOG PRICES FOR
 THE CALENDAR YEAR 1943**

Compiled by HENRY B. STEER,¹ senior forest economist, Division of Forest Economics,
Forest Service

¹ A large part of the statistical work was contributed by Lake F. Compton and Irene W. Uderitz.

INTRODUCTION

Stumpage- and log-price data are collected annually by the Forest Service, with the cooperation of the Bureau of the Census, Department of Commerce; 1943 is the sixteenth consecutive year for which records have been published in comparable form. Statistics of this nature, compiled and analyzed for a number of years, are fundamental to the development of forest plans and programs, both public and private.

They are used for this purpose by foresters and economists. The annual record, aside from its value in indicating long-time trends and permitting comparisons, is in itself useful to public and private agencies and to individual timber owners.

The record for the calendar year 1943, like those for the years 1928-42 which were published in former statistical bulletins, has been compiled from a large number of representative reports of private stumpage and log transactions, coming from 46 States.¹

Sales or purchases of State or Federally owned standing timber were not included in the study. Publicly owned timber is invariably sold on the basis of an actual or closely estimated log scale, whereas privately owned timber is frequently sold on the basis of a rough timber cruise. On the other hand, as in previous years, the log-price data presented are based on private transactions of logs without regard to ownership of the timber from which the logs were cut.

The reports on which the price-data compilations are based were obtained by means of a questionnaire sent to selected lists of independent loggers, operators of sawmills, and of primary wood-using industries other than sawmills—such as pulp, veneer, and cooperage establishments. The survey for 1943 resulted in usable reports involving 15,391 transactions of stumpage and 6,125 transactions of logs. In terms of over-all quantities of timber, the stumpage sales reported involved 14,646,800 M board feet, and the log sales, 5,517,087 M board feet.

The quantity and distribution of the stumpage and log sales, which are shown in tables 1 and 2, are deemed adequate to give reliable average prices of major species for the country as a whole and of total logs and stumpage of species combined for individual States. The average prices presented for species involving only a few transactions and small quantities have been included for sake of completeness although it should be understood that their reliability may be subject to considerable sampling error.

The market prices given in this bulletin should be used with the clear understanding that the average prices cannot be applied indiscriminately to a specific tract. There are many factors which determine the price of stumpage or logs, as is reflected by the range between the minimum and maximum prices for each species.

The selling price of standing timber follows in a general way the same trends as the prices of lumber and other wood products. For individual transactions, however, the price paid for standing timber depends, among other things, on the species, quality, size, and density of the timber; the quantity sold, and whether for immediate or future

¹ No reports of sales of logs were received from Arizona or Nebraska; and no reports of either stumpage or logs from Nevada or North Dakota.

cutting; the quantity of other timber available and the competitive demand for it; the kind of product to be manufactured; the location with respect to manufacturing plants, transportation facilities, and markets; the cost of exploitation as determined by local conditions with respect to topography and surface, labor, cost of equipment and supplies, etc.; the form of sale (lump sum, flat rate per thousand feet, specific rate for different kinds of timber, etc.); the terms of sale, including provisions as to time and rate of payment, method of cutting, requirements as to fire protection, brush disposal, utilization, etc., and provisions regarding taxes; and, finally, the desire of the purchaser to buy and the seller to sell, and the knowledge of values on the part of each. With logs, also, the price received depends to a large degree on the conditions involved in the particular transaction. Competition between purchasers and the knowledge of values on the part of both purchaser and seller exert a very great influence on the selling price of both standing timber and logs.

CLASSIFICATION

Sales of both stumpage and logs have been classified into two main groups: (1) Individual sales, which include not only sales of single species but also sales of several species if each was sold at an individual price instead of being grouped with other species for a lump sum or at a uniform rate per thousand feet; (2) flat-rate sales, in which two or more species were grouped together and sold for a lump sum or at a uniform rate. In compiling flat-rate sales no accounting has been made of the different species involved, since the price paid for each could not be definitely or satisfactorily determined. Flat-rate and individual sales have been combined, however, into State and regional averages for softwoods, hardwoods, and all species.

Flat-rate sales amounted to 37 percent by volume of the stumpage transactions considered in the survey sample for 1943, and 14 percent by volume of the log transactions (table 1). Higher stumpage prices were obtained for both softwoods and hardwoods when sold individually. The same is generally true in the case of log sales, although flat-rate sales of logs are not nearly so common as are flat-rate sales of stumpage. The difference between the 37 percent of flat-rate stumpage sales and the 14 percent of flat-rate log sales is accounted for by the fact that logs are the first step in the conversion of standing timber into usable forest products. Although there are no definite and well-established log markets of any great consequence except in the Douglas-fir region of Washington and Oregon, the conditions under which logs are sold are fairly uniform, the price level varying with the kind and quality of logs sold, along with several other factors, such as the amount of competition and the distance to manufacturing plants. On the other hand, there is no fairly well-established stumpage market, and sales for a lump sum are much more common with regard to stumpage than to logs.

It is probably true that more of the higher grade stumpage and logs are sold individually (by species), and that the poorer grades are more likely to be grouped together and sold collectively. Yet this fundamental principle of merchandising is involved in the sale of standing timber and logs, as in sales of any other raw material or commodity: When all other factors have been given due consideration,

the vendor is more likely to receive the true value of his merchandise if he takes a careful inventory of the different kinds of material that he has for sale and markets them as individual items in one transaction rather than in one unitized lot. Flat-rate sales of stumppage or logs by the Government or by large timber-holding corporations are practically, if not entirely, unknown, and it is becoming more and more common, even for farmers, to cut their own timber and dispose of the logs to a manufacturing concern at individual prices for the different kinds.

COMPARISON WITH THE 1942 DATA

The size of the sample from which price data was solicited was approximately the same in 1943 as in 1942. The returns, however, yielded some 2,000 fewer transactions in 1943 on which average prices were based. In point of quantities of wood involved, the board feet of standing timber were somewhat less in 1943 (14.6 billion feet) than in 1942 (15.5 billion feet) and similarly the board feet of logs were less in 1943 (5.5 billion feet) compared with 1942 (7.2 billion feet). The smaller amount of data in 1943 can be attributed to a number of factors.

Part of the decrease was due to the failure of loggers, sawmill operators, and others to submit reports. Aside from this, however, it is evident from the reports received that there was an appreciably smaller amount of logs produced (and sold) by small, independent and part-time loggers in 1943 than in 1942. There appears to have been a growing tendency for the operators of sawmills and other log-using establishments to produce a larger amount of the logs consumed in their plants in their own logging camps or to increase the amount of logs produced by loggers under direct contract. This resulted, of course, in a reduction in the amount of logs purchased in 1943 from independent loggers, farmers, and other small operators.

The average price of standing timber, as judged by the sample surveyed, increased about 24 percent in 1943 over 1942; average log prices increased about 16 percent. This was to have been expected for two reasons, first because the general trend of commodity prices was up in 1943, and second because price ceilings on some important forest products were either removed or increased in 1943.

According to preliminary statistics of the Bureau of Labor Statistics,³ the wholesale prices of all commodities increased about 4 percent; taking the 1926 average price as 100, the increase was from 98.8 in 1942 to 103.1 in 1943. Increases of about 16 percent (105.9 to 122.6) were reported for all farm products, 1 percent (110.2 to 111.4) for all building materials, and 4 percent (132.8 to 138.5) for lumber. An increase in the index number of lumber was recorded for every month except March (when there was no change), whereas the index number of all commodities increased steadily during the first 5 months of 1943, then decreased during the next 6 months (with the exception of September, when there was no change) and then rose slightly in December.

The index of wholesale prices for all commodities and for lumber, according to the Bureau of Labor Statistics, was as follows during 1942 and 1943 (1926 equals 100):

³ United States Bureau of Labor Statistics. Average wholesale prices and index numbers of individual commodities. U. S. Bur. Labor Statis. 43-4358, 4678, 5034, 5422, 5832; 44-214, 575, 983, 1385, 1700, 2085, and 2568. (Mimeographed.) 1943.

June.....			Year 1943.....	138.5

Some upward adjustments were made in price ceilings in 1943, which would tend to raise the prices of the finished commodities as well as of the raw materials—both logs and standing timber—from which they were made. For example, Maximum Price Regulations 19, 26, 94, 97, 222, and 223 issued during 1943 adjusted existing regulations to permit price increases in lumber of the following species: southern pine, Douglas fir, western pine, southern hardwoods, northern softwoods, and northern hardwoods. Furthermore, it should be noted that stumpage- and log-price statistics for years prior to 1943 reflect normal supply and demand relationships, whereas during 1943 maximum price regulations of the Office of Price Administration have restricted normal price movements. The basic orders through which controls were exercised were MPR 460, western timber (stumpage) and MPR 348 (logs). No order regulating the prices of standing timber has been put into effect in the East. Of some importance but not affecting a very large percentage of the total volume of logs sold is MPR 313, which placed ceilings on high-grade logs of veneer quality. MPR 161 (West coast logs) went into effect late in 1942 and was continued through 1943. Some upward adjustments in price ceilings were made in 1943, including the granting of price increases to operators working overtime.

Although the full effect of these maximum price regulations cannot be isolated or accurately determined, it is evident for the first time in this series of annual bulletins that prices have been affected by other than usual normal factors.

TRENDS SINCE 1929

A total of 15,703,564 M feet of standing timber and 8,590,595 M feet of logs constituted the quantities upon which average prices in this series of bulletins were determined for 1929. The yearly record of quantities since 1929, both actual and in percentage of the 1929 quantities, as recorded in these bulletins, is as follows:

Year	Stumpage		Logs	
	Quantity (M ft. b. m.)	Percent	Quantity (M ft. b. m.)	Percent
1929.....	15,703,564	100.0	8,590,595	100.0
1930.....	7,254,428	46.2	7,066,015	89.2
1931.....	3,280,528	20.9	3,551,917	41.3
1932.....	1,840,101	11.8	2,210,941	25.7
1933.....	3,801,765	24.0	3,527,548	41.1
1934.....	4,152,778	26.6	3,586,169	41.7
1935.....	6,543,006	41.7	4,203,703	50.0
1936.....	7,132,009	45.4	5,083,233	59.2
1937.....	8,938,678	67.0	5,612,861	64.2
1938.....	7,083,064	44.0	4,477,069	52.1
1939.....	8,440,632	53.8	5,783,040	67.3
1940.....	12,091,713	77.0	6,752,243	78.6
1941.....	13,502,245	88.4	8,109,325	94.4
1942.....	15,483,553	98.5	7,188,241	83.7
1943.....	14,040,800	93.3	5,517,087	64.2

This tabulation, although based on fluctuating samples of the log and stumpage transactions in the United States in the years covered, undoubtedly indicates the general trends.

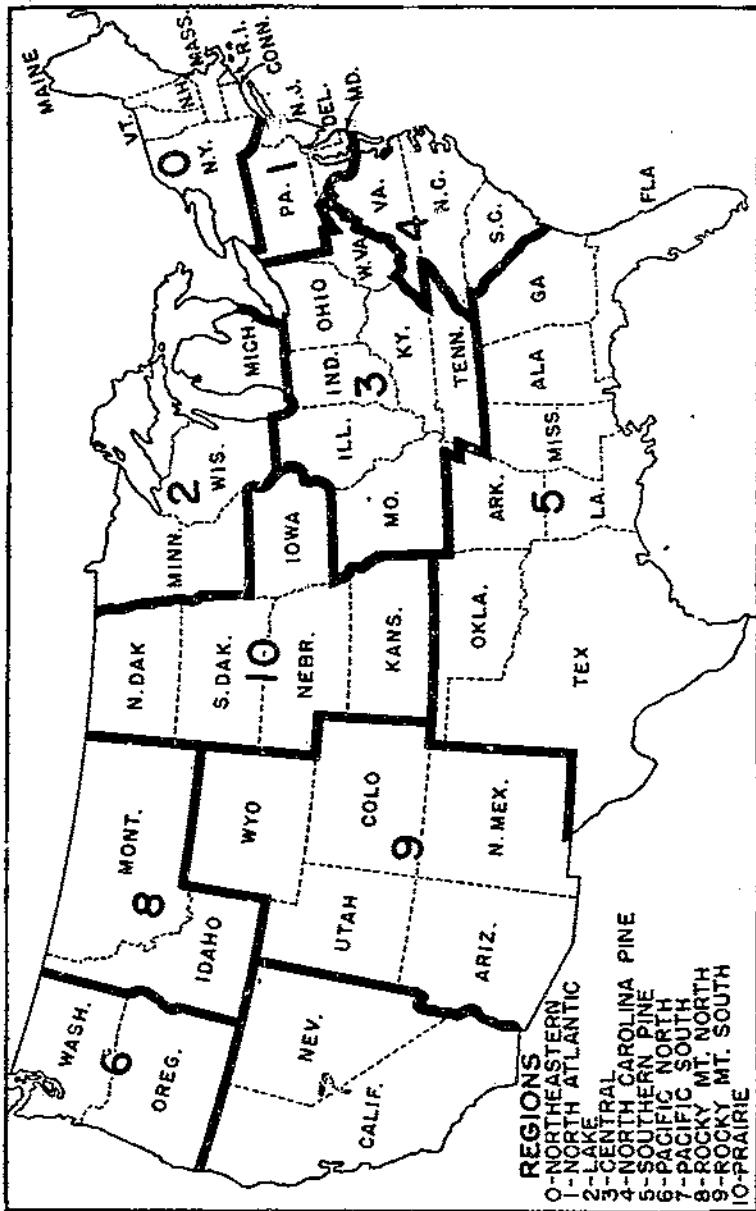

FIGURE 1.—Stumpage and log regions in the United States.

Generally speaking, price trends of most commodities are based on equivalent materials from year to year. In interpreting the stumpage-price data presented here, especially with regard to making comparisons of prices as between years, it should be kept in mind that although

there are probably some instances in which the same timber has changed hands two or more times before being cut, average stumpage prices of successive years cannot be based on the same stands of timber. No two tracts of timber are identical, although many may be similar as regards volume, species, topography, and accessibility. All the more important factors influencing stumpage prices vary considerably over a period of years, since standards of merchantability constantly change and since the natural tendency is to acquire and to cut the best and most accessible timber first. A comparison of the general average prices obtaining during the last 5 years should be based on as nearly identical transactions as possible. If, for example, the 1943 average stumpage and log prices are computed on the basis of the 1943 rates for the different species and the percentages which the different species formed of the total sales reported in 1942, the main cause of dissimilarity between the 2 years is removed. It is not illogical to assume that the important factors other than species distribution determining stumpage and log prices do not vary greatly as between 2 consecutive years. This method is less accurate in the case of widely separated years.

The result obtained by computing annual average stumpage and log prices by the method just described, beginning with the 1929 average of \$3.64 per thousand board feet for stumpage and \$17.08 per thousand board feet for logs are as follows:

Year	Stumpage		Logs	
	Average price per M ft. b. m. as reported	Percent deviation ¹	Average price per M ft. b. m. as reported	Percent deviation ¹
1929	\$3.64		\$17.08	
1930	3.27	-13.5	15.03	-10.3
1931	3.13	-20.8	12.44	-17.0
1932	2.88	-3.8	10.24	-17.0
1933	2.57	-6.6	10.99	+5.0
1934	2.87	+4.7	11.93	+10.8
1935	2.76	+1.7	12.45	+2.9
1936	3.05	+5.1	13.31	+6.3
1937	2.84	+6.9	14.58	+12.0
1938	2.90	-5.7	13.78	-7.3
1939	2.68	-6.0	13.84	-0.5
1940	2.61	+7.4	14.41	+5.8
1941	3.12	+10.9	17.23	+18.5
1942	3.79	+15.7	21.56	+24.7
1943	4.34	+23.5	25.12	+16.1

¹ From average price of previous year, when the percentages of the several individual species are held constant.

Computing annual average stumpage and log prices for 1942 and 1943 by the method just described, increases of 23.5 percent and of 16.1 percent in the average price of stumpage and logs, respectively, are indicated, as follows:

Average price per M feet b. m. individual sales:²

	Stumpage		Logs		
	Softwoods	Hardwoods	Softwoods	Hardwoods	
1942	\$3.77	\$7.69	1942	\$21.05	\$29.94
1943 ²	4.67	9.45	1943 ²	23.58	42.58
Increase, 1943 over 1942:			Increase, 1943 over 1942:		
Dollars	.90	1.76	Dollars	2.53	12.64
Percent	24	23	Percent	12	42

¹ Prices of flat-rate sales are not included because the percentage of the component species cannot be determined.

² Computed on the basis of the 1943 prices for the different species and the percentages which the different species comprised of the 1942 totals.

Since softwoods comprised approximately 90 percent by quantity of all stumpage and log sales, weighting the above increases results in an indicated rise of 23.5 percent in stumpage prices and 16.1 percent in log prices, as indicated on page 7.

In addition to the factors affecting stumpage and log prices listed earlier (see p. 7), prices of manufactured forest products, principally lumber, materially affect the levels of stumpage and log prices. When lumber prices rise there is a lag before the rise is reflected in log and stumpage prices because logs are commonly contracted for in advance of sawmilling, and stumpage in turn is purchased in advance of logging. For the same reasons, the order of events is reversed when lumber prices recede. Under any given price structure of lumber, logs, and standing timber, a certain amount of standing timber in any given locality is nonmerchantable because the cost of exploitation would be greater than the return recoverable from the sale of the manufactured forest products. This is not only true of individual trees, of tracts of timber, and of species of trees, it is also true of small or unsound logs. When lumber prices increase, it becomes economically possible to log individual trees, or tracts, or species, or to haul small or unsound logs to the mill, which it was not possible to do before lumber prices rose. Note, however, that the prices paid for this previously unmerchantable timber and logs will be relatively low and will tend to reduce the average price of all timber and logs sold. So it can very easily be that increases in prices of stumpage and logs in 1943 over the 1942 levels for comparable kinds have, as a matter of practical fact, been appreciably greater than those shown above.

THE 1943 RECORD

As shown in table 1, about 84 percent of all the standing timber in the 1943 sample were softwoods; 7 percent were hardwoods; and the remainder, flat-rate sales, consisted of mixed hardwoods and softwoods. The western species constituted a much larger percentage of the total volume than did the eastern and southern species; ponderosa pine, for example, amounted to about 15 percent and Douglas fir to 50 percent of the 1943 total of individual softwoods.

Similarly, 89 percent of the log sales reported involved softwoods and about 8 percent hardwoods. The remainder were flat-rate sales of hardwoods and softwoods combined.

Table 2 gives, by States and regions, the volume of stumpage and logs, the percentage distribution, and average prices for 1942 and 1943.

Tables 3 to 11, inclusive, give the average stumpage and log sale prices of all individual species of softwoods and hardwoods and the average flat-rate prices of softwoods, hardwoods, and mixed woods, and also State averages. The 1943 reports seem to indicate, like those of previous years, that, other things being equal, the prices of standing timber and logs increase in direct ratio to the nearness of the districts of largest consumption of wood products. While ponderosa pine stumpage, largely virgin stands, was bringing an average of \$4.31 per thousand feet in the far West, northern white pine stumpage, largely second-growth stands, was bringing \$7.83 per thousand feet in the Lake States and the Northeast. Similarly, while Douglas fir (largely virgin) averaged \$3.47 per thousand feet in 1943, shortleaf pine (largely second growth) averaged \$9.56. Generally speaking, both

stumpage and log prices have been maintained at higher levels east of the Great Plains than in the far West.

In tables 3 to 11, sales of individual species in the several States have been shown separately for each type of sale and prices have been averaged for each type; the price range (from minimum to maximum) has also been given. Because in the near future, in computing costs and returns, the prices of second-growth timber will probably be used exclusively, the average selling price per thousand feet for second-growth timber has also been given. Similarly, because the major volume of logs are manufactured into lumber, the average selling price of lumber logs has been given for individual species and for each type of sale, as well as the average price and the price range for all log sales.

Tables 12 and 13 give average stumpage and log sale prices in the several States, by individual species and type of sale, and also the quantities involved.

Recapitulation of the stumpage- and log-price data, by species, type of sale, and region (table 14), gives in some instances a clearer picture of conditions than it is possible to obtain through consideration and analysis of the data for single States, since the returns for some States are unavoidably fragmentary and therefore less consistently representative than regional averages, based on greater numbers of transactions.

Analysis of the 1943 data shows that the extremely low and high prices were effective in a relatively small proportion of the reported transactions, involving only a small part of the total volumes of stumpage and logs. Frequency of price-range classes is shown, by species and type of sale, in table 15. About 41 percent, by volume, of the stumpage was sold at prices between \$1 and \$4 per thousand feet.

Table 16 gives an analysis of the different species and types of sale, by virgin, second-growth, and mixed, or culled virgin stands. There are probably some inaccuracies in the reports on which this table is based, as is indicated by the footnotes. However, even when proper allowance is made for these, the relative quantity of second-growth timber transactions reported in this bulletin (24 percent) is surprisingly small.

One result of the tremendous need for forest products in connection with the war has been to shift the utilization of logs of the several species from the manufacture of the usual product to another which is in greater demand. Because of this situation, the quantity, total value, and average prices of the logs for which reports were obtained in 1942-43 are given by species and type of product in table 17.

Reports indicate that about 67 percent of all the logs sold in 1943 were intended primarily for the production of lumber. The percentage of logs intended primarily for this purpose is still below that of 1929; for the years 1929-43, respectively, the percentages were 92, 83, 81, 74, 69, 66, 72, 74, 70, 69, 73, 69, 69, 63, and 67.

By far the greater part of the volumes of standing timber and logs for which reports were obtained in 1943 were from the Northwest. Because conditions within those States with regard to both timber stands and log markets differ widely from conditions elsewhere, a separate analysis is justified.

Tables 18 to 25 give stumpage and log sales in California, Oregon,

and Washington, by species and type of sale, separately for the regions into which these States are divided by natural forest conditions, and of log sales in the northern Rocky Mountain region comprising western Montana, northern Idaho, and the three northeastern counties of Washington. Purchases of logs for the manufacture of lumber, veneer, and other products in western Washington and western Oregon as well as stumpage transactions by species and type of sale are shown in table 22.

In the administration of the provisions of the General Maximum Price Regulation, issued late in April 1942, which have been applied to logs, lumber, and other forest products, the Office of Price Administration has established certain eastern regions, the boundaries of which do not follow State lines in all instances. To facilitate the use of these data in connection with the determination and application of price ceilings, stumpage and log prices by these eastern Office of Price Administration regions are given in tables 26 and 27.

The report form used in collecting the data is shown on pp. 136 to 138.

TABLE I.—*Total stumpage and log sales reported, by species and type of sale, 1943, and average price, 1942-43*

STUMPAGE SALES

¹ The timber has been classified as reported by cooperators. In some instances species such as aspen and jack pine, although they are second growth in the strict sense of the word, have been reported as virgin, because stands have not been logged. In the far West, small virgin timber is commonly called second growth and has been so reported.² Less than 0.5 percent.
