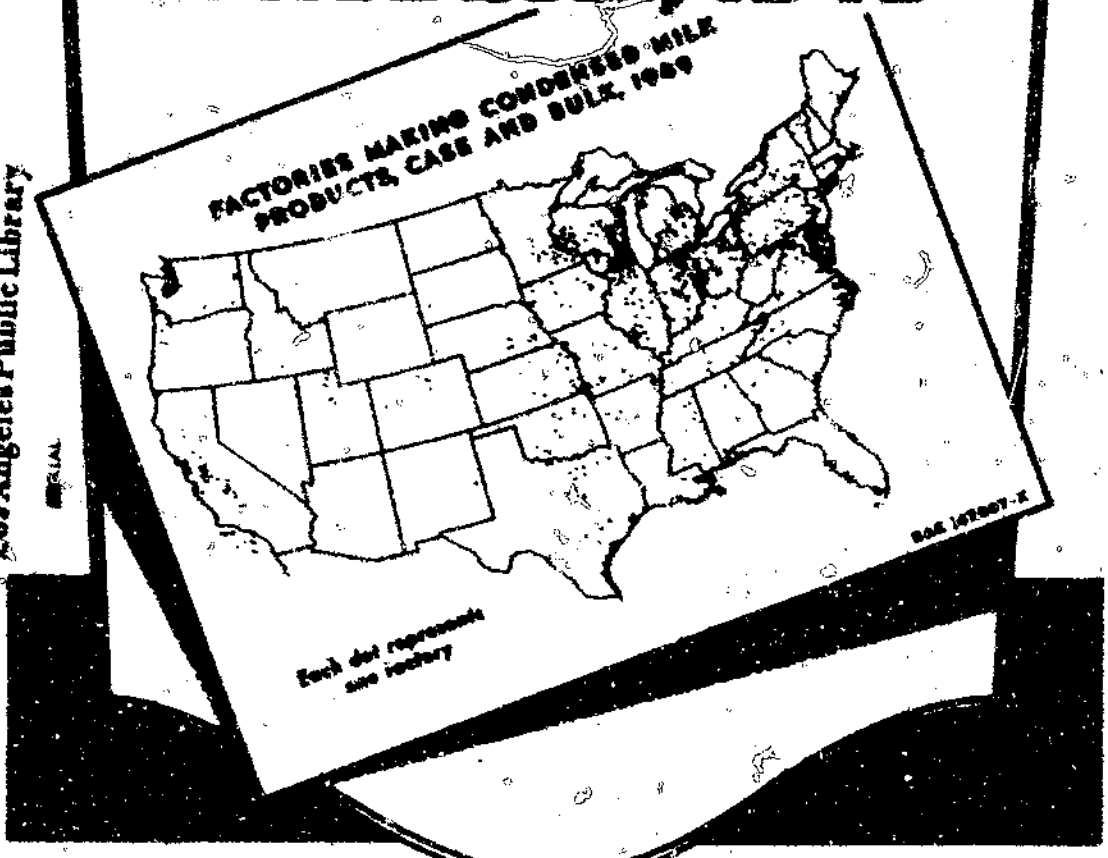
PRODUCTION OF MANUFACTURED DAIRY PRODUCTS, 1949



Los Angeles Public Library
DEC - 8 1950

UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF AGRICULTURAL ECONOMICS

Washington, D. C. November 1950

R 630.5 U53-13 no. 93-102

STATISTICAL BULLETIN No. 93

© UPDATA 1981

The data for manufactured dairy products in 1949, given in this report, are compiled from reports made by dairy manufacturers direct to the United States Department of Agriculture or through the cooperating State agencies shown below

State	Agency	Collaborator
Alabama	State Department of Agriculture and Industries	J. Haygood Patterson, Commissioner
California	State Department of Agriculture	A. A. Brock, Director
Colorado	State Department of Agriculture, Division of Animal Industry	Harry B. Stover, Dairy Section
Idaho	State Department of Agriculture, Bureau of Dairying	Lester Hendrix, Director
Illinois	State Department of Agriculture	Roy E. Yung, Director
Indiana	State Experiment Station, Creamery License Division	T. H. Binney, In charge
Iowa	State Department of Agriculture, Dairy and Food Division	Roy J. Sours, Chief
Kansas	State Board of Agriculture, Dairy Division	E. E. Paige, Commissioner
Michigan	State Department of Agriculture, Bureau of Dairying	F. M. Skiver, Director
Minnesota	State Department of Agriculture, Dairy and Food Division	Byron W. Clark, Commissioner
Mississippi	State Department of Agriculture and Commerce	S. Corley, Commissioner
Montana	State Department of Agriculture, Labor and Industry	Alfred E. Anderson, Commissioner
Nebraska	State Department of Agriculture and Inspection, Bureau of Dairies, Foods, Weights and Measures	Gould B. Flagg, Chief
Nevada	State Extension Service	Dr. V. E. Scott, Extension Dairyman
New York	State Department of Agriculture and Markets, Division of Milk Control	Kenneth F. Fox, Director
North Carolina	State Department of Agriculture, Dairy Division	C. W. Pougrem, Director
North Dakota	State Department of Agriculture and Labor, Dairy Division	William J. Murphy, Commissioner
Ohio	State Department of Agriculture, Division of Foods and Dairies	H. S. Mount, Director
Oklahoma	State Board of Agriculture, Bureau of Dairying	Clyde D. Lacey, Commissioner
Oregon	State Department of Agriculture Division of Foods and Dairies	E. L. Peterson, Director
Pennsylvania	State Department of Internal Affairs	William S. Livengood, Secretary
South Dakota	State Department of Agriculture	L. V. Amman, Secretary
Tennessee	State Department of Agriculture, Division of Foods, Fertilizers and Dairies	James W. Parker, Commissioner
Utah	State Board of Agriculture, Dairy and Foods Division	Guy P. Stevens, Supervising Inspector
Virginia	State Department of Agriculture, Dairy and Food Division	S. S. Smith, Director
Washington	State Department of Agriculture, Dairy and Livestock Division	Seneca K. Crandall, Director
West Virginia	State Department of Agriculture	J. B. McLaughlin, Commissioner
Wisconsin	State Department of Agriculture Dairy Division	Harvey J. Vearners, Chief

PRODUCTION OF MANUFACTURED DAIRY PRODUCTS 1/
1949

The milk equivalent of manufactured whole-milk products produced in the United States in 1949 totaled 54,953,000,000 pounds; this is 6 percent higher than 1948 and is the fifth highest production on record, according to the Bureau of Agricultural Economics. Sharp gains were shown from 1948 to 1949 in creamery butter and cheese production, whereas declines were shown in evaporated and condensed milk, dry whole milk, and ice cream. New high records were established for output of American, Swiss, and total cheese, and for cottage cheese. Production of canned condensed and evaporated milk, dry whole milk, and ice cream was the lowest in several years.

Whole-milk Equivalents Increase in Volume

Whole-milk equivalents of manufactured dairy products totaled 54,954,748,000 pounds during 1949, a gain of 6 percent or 3,224,000,000 pounds from the preceding year. Use of milk on a whole-milk-equivalent basis in manufactured dairy products in 1949 represented 46 percent of total milk produced on farms during the year. Sharp gains in the quantities of whole-milk equivalent used in creamery butter and in whole milk used in all cheese were partially offset by declines in quantities used in evaporated and condensed milk, dry whole milk, and ice cream. Whole-milk equivalent used in creamery butter increased more than 4 billion pounds from 1948 to 1949, while whole milk used in all cheese rose more than 1 billion pounds. Utilization of whole milk in evaporated milk declined more than 1-1/3 billion pounds, while that for all other products dropped a total of about 1/2 billion pounds. Per capita use of whole-milk equivalent in the 1949 production of manufactured dairy products was 368.3 pounds, a gain of 5 percent from 1948.

Wisconsin led in the volume of whole-milk equivalent utilized in manufactured dairy products in 1949. Its total of 11,030,684,000 pounds was equal to 71 percent of the total milk produced on farms in the State. Minnesota ranked second with 6,397,308,000 pounds, or 77 percent of the State milk production utilized in manufactured dairy products. With a milk equivalent of 4,413,815,000 pounds, Iowa ranked third. About 92 percent of the milk produced in Iowa in 1949 for manufacturing purposes was used in the production of creamery butter.

Creamery Butter Production

Creamery butter production during 1949 totaled 1,412,101,000 pounds, the largest since 1944 and up 17 percent from 1948. Minnesota with an output of 252,621,000 pounds, ranked first as in preceding years. Iowa ranked second, with 193,153,000 pounds. Wisconsin strengthened its third rank position by a gain of 68 percent from 1948 to 1949. Production in Wisconsin was 168,214,000 pounds, 11.9 percent of the country's total. This is the highest proportion of the national production manufactured by Wisconsin in 25 years. Other States in order of their rank were Nebraska, Missouri, Ohio, Illinois, Michigan, Indiana, and Kansas. All principal regions registered gains over 1948 except the Mountain States.

1/ The material appearing in this report was compiled under the supervision of W. D. Bormuth, in cooperation with Federal-State Statisticians and cooperating State agencies, and under the general direction of B. H. Bennett, Head, Division of Dairy Statistics, Bureau of Agricultural Economics. All of the computations in this publication were made under the supervision of Jessie M. Cooley.

Production of Total Cheese Highest on Record

Production of total cheese in 1949 was 1,200,011,000 pounds, the largest on record, showing a gain of 9 percent over 1948. Wisconsin had an unchallenged leadership in volume of cheese production; it produced 47 percent of the United States total. This is the highest proportion of the national production made by Wisconsin since 1946. New York's output in 1949 exceeded that of Illinois. This enabled New York to recapture second rank for the first time since 1940. Illinois ranked third; Missouri fourth; followed by Minnesota, Tennessee, Ohio, Indiana, Michigan, and Kentucky.

American Cheese Production Also Record High

American cheese production totaled 935,018,000 pounds in 1949 -- the highest on record, and showing a gain of 9 percent over 1948. However, the new record was only fractionally above the previous record of 1947. Wisconsin remained the undisputed leader in volume, with a production of 430,103,000 pounds. Missouri surpassed Illinois for the first time to gain the second position; it produced 64,114,000 pounds, Illinois was third, with 57,136,000 pounds. Other States in order of production were: Minnesota, 54,309,000 pounds; Tennessee, 41,333,000 pounds; New York, 39,354,000 pounds; Indiana, 38,910,000 pounds; Ohio, 26,380,000 pounds; Kentucky, 26,354,000 pounds; and Oregon, 24,264,000 pounds.

© UPDATA 1981

Of the types of American cheese made in the United States, Cheddar is the most important, comprising 95 percent of the total American-type cheese made. Output of Cheddar totaled 885,114,000 pounds in 1949, a gain of 9 percent over 1948. Other types of American cheese are Colby, Washed Curd, Jack, and Monterey. Their combined production was 49,904,000 pounds, a gain of 18 percent over 1948.

Other Cheese Higher in Volume

For the first time in 4 years, the combined production of cheese other than American whole-milk cheese increased. The output of 264,993,000 pounds for 1949 was up 9 percent from the preceding year. Most of the major varieties of cheese in this group registered gains in output from 1948 to 1949. The principal exceptions were part-skim American, Limburger, Blue Mold, and miscellaneous varieties. Production of Swiss cheese in 1949 reached a new high record of 81,043,000 pounds, 15 percent above 1948 and 13 percent above the previous record in 1947. Output of Munster cheese was 10,098,000 pounds, the second highest on record and 22 percent above the production in 1948. Brick cheese production totaled 20,278,000 pounds, the highest since 1941 and 11 percent above the preceding year. Limburger cheese production during 1949 at 7,180,000 pounds was the lowest since 1943 and 2 percent less than the previous year. Output of Italian varieties of cheese totaled 55,127,000 pounds, the highest since 1946, the third highest on record, and 26 percent higher than in 1948. At 54,449,000 pounds, cream cheese output for 1949 was 3 percent higher than in the previous year. Output of Neufchatel cheese was 4,046,000 pounds, 5 percent higher than in the preceding year. Production of Blue Mold cheese at 8,141,000 pounds was the lowest since 1944 and down 12 percent from 1948. Unclassified varieties of cheese totaled 23,860,000 pounds -- the lowest total since 1944, and 7 percent below the preceding year.

Wisconsin led in the output of all classified varieties of cheese except cream and Neufchatel cheese. New York led in volume of cream cheese production, with Wisconsin ranking second. In output of Neufchatel cheese, Pennsylvania led and Wisconsin produced none. Wisconsin's proportion of the Nation's 1949 cheese production by varieties was as follows: Swiss, 60 percent; Munster, 95 percent; brick, 91 percent; Limburger, 49 percent; Italian, 50 percent; cream,27 percent; Blue Mold, 59 percent; and unclassified varieties, 28 percent.

Cottage cheese production for 1949 was the highest on record. Output of cottage cheese curd was 283,607,000 pounds, a gain of 11 percent over the previous year. Nearly one-third of the total United States output of both cottage cheese curd and creamed cottage cheese is produced in New York and California. Creamed cottage cheese production at 286,766,000 pounds was 15 percent higher than in 1948.

Evaporated Whole-Milk Production Sharply Lower

Production of evaporated whole milk during 1949 was 2,755,780,000 pounds, the lowest since 1940. However, gains in production over 1948 were shown by all regions except the South Central States. Wisconsin ranked first with 578,578,000 pounds, or 21 percent of the Nation's total. Other States in order of production were: Ohio, 280,213,000 pounds; California, 268,496,000 pounds; Kentucky, 199,816,000 pounds; Illinois, 166,052,000 pounds; Missouri, 163,396,000 pounds; Tennessee, 128,829,000 pounds; Michigan, 127,756,000 pounds; Indiana, 94,641,000 pounds; and Idaho, 74,349,000 pounds; Kentucky was one of the few States in which the output increased and its rank changed from seventh to fourth from 1948 to 1949. On the other hand, Missouri's production dropped from fourth to sixth place.

(C) UPDATA 1981

Canned condensed whole-milk output for 1949 was 100,902,000 pounds, down 20 percent from the previous year. States in order of production were: Michigan, Wisconsin, Oregon, Mississippi, New York, and California.

Output of plain condensed whole milk was 202,073,000 pounds for 1949 -- 1 percent higher than in the previous year. Production of sweetened condensed whole milk totaled 48,085,000 pounds, a gain of 6 percent from the preceding year.

Production of Ice Cream Declines for Third Successive Year

Production of ice cream in 1949 totaled 556,654,000 gallons, a decrease of 3 percent from 1948 and 2 percent from the 1944-48 average. This was the third successive year since the peak in 1946 that national output of ice cream has been lower than for the preceding year. Production is still considerably larger than prewar, however, when it averaged around 315,000,000 gallons annually.

The decline in the 1949 production of ice cream was rather general. Only nine States -- New York, Pennsylvania, Wisconsin, Louisiana, Montana, Idaho, Colorado, Nevada, and Oregon -- reported a larger output than in 1948. The increase in most of these States was small.

Production of ice cream for wholesale distribution in 1949 totaled 506,803,000 gallons and for retail distribution 49,851,000 gallons. The output in both of these categories declined; the decrease in wholesale production was 3 percent, and in retail production it was 2 percent.

Output of Milk Sherbet and Ice Milk Increases

In contrast to the trend in ice-cream production, output of both milk sherbet and ice milk in 1949 was substantially larger than in 1948. Totaling 13,573,000 gallons, the production of milk sherbet was the largest since 1945 when a peak of 65,177,000 gallons was reached. Although the output in 1949 was sharply below that of the war years, the expansion in the last few years has been steady, and it appears to be of a more permanent nature than the rapid increases of 1943, 1944, and 1945. Those 3 years were war years when the limitation on use of butterfat in the production of ice cream caused manufacturers to hold back their output of ice cream and increase without limitation the production of such frozen dairy foods as milk sherbet and ice milk that did not require as much butterfat as ice cream.

The production of ice milk in 1949 totaled 25,455,000 pounds, a gain of 30 percent over 1948 and a new high record output for one year. Although the production of ice milk is widely distributed, the largest part is made in the West. The three Pacific Coast States -- California, Oregon, and Washington -- produced more than half of the total in 1949; California alone made about 43 percent of output.

Production of Other Frozen Dairy Foods

Before 1949, separate figures were collected and published on the production of frozen custards and frosted or frozen malted milk. Beginning with the year 1949 and because of the difficulty in obtaining a clearly defined classification for these two products, all frozen dairy products (other than ice cream, milk sherbet, and ice milk) were placed together in one category under the designation of "Other Frozen Dairy Products." Production for the year totaled 7,103,000 gallons. In

(C) UPDATA 1981

1948, the combined production of frozen custards and frosted or frozen malted milk totaled 4,986,000 gallons. Although it is not possible to make absolute comparisons between the combined production of frozen custards and frosted or frozen malted in 1948 with the production of "Other Frozen Dairy Products" in 1949, the comparison is sufficiently sound to indicate a rather sharp expansion in th production of miscellaneous frozen dairy products in 1949 over 1948.

Ice-Cream Mix

The Bureau of Agricultural Economics has been collecting data on the production of ice-cream mix in a few States for several years. In order to get a more comprehensive figure the 1949 survey of the ice-cream industry was extended to cover the production of ice-cream mix in all States. The collected data indicated a 1949 production of 299,528,000 gallons. Not all of this mix was used in ice cream, as some undetermined quantities were used for the production of "frosted or frozen malteds" and possibly some other miscellaneous frozen dairy products. This inquiry will be continued and the data should be more useful when year-to-year comparisons can be made.

Water Ices

In 1949, for the first time, an inquiry on the production of water ices was added to the questionnaire used by the Bureau in its survey of the ice-cream industry. Reports from the industry indicated that, in 1949, a total of 19,342,000 gallons of water ices was made by ice-cream manufacturers. Because of the absence of data, no comparison of this figure can be made with either the production in 1948 or in preceding years but from reports received informally from the trade, it is believed that the production was somewhat larger in 1949 than in 1948.

Skim-Milk Products Up Sharply

Total skim-milk equivalent of all manufactured dairy products for 1949 at 16,398,000,000 pounds was the highest on record and 25 percent above the previous year. The gain was largely the result of an increase of nearly 2 billion pounds used in nonfat dry-milk solids. Wisconsin held a substantial lead in the quantity of total skim-milk equivalent used in manufactured dairy products -- 3,564,106,000 pounds, or 22 percent of the United States total. Minnesota came second with 2,480,880,000 pounds, or 15 percent of the total. Other leading States in order of their rank were: New York, California, Michigan, Ohio, Indiana, Missouri, Illinois, Pennsylvania, and Iowa.

Nonfat Dry-Milk Solids Record High for Sixth Successive Year

Nonfat dry-milk solids produced in 1949 totaled 933,662,000 pounds, a new high record which was 37 percent above the figure for the preceding year. Spray-dried nonfat milk solids totaled 629,341,000 pounds, a gain of 44 percent from the previous year. Roller-dried nonfat milk production totaled 304,321,000 pounds, an increase of 24 percent from 1948. Production of total nonfat dry-milk solids showed a gain from 1948 to 1949 in all States except Idaho where output was only slightly lower.

UPDATA 1981

TABLE 2 -- SKIM MILK EQUIVALENT OF MANUFACTURED SKIM AND BUTTERMILK PRODUCTS, UNITED STATES, 1934-49

Year	Full skim American cheese	Cottage pot & bakers' cheese	Condensed and evaporated skim milk	Concentrated skim milk (for animal feed)	Nonfat dry milk solids	Dry casein	Cond. & dried buttermilk	Total
	Mil.lb.	Mil.lb.	Mil.lb.	Mil.lb.	Mil.lb.	Mil.lb.	Mil.lb.	Mil.lb.
1934	2	645	789	38	3,244	1,333	787	6,838

1940	4	1,089	1,244	45	5,300	1,664	1,083	10,429
1941	7	1,172	1,519	58	5,242	1,690	1,217	10,905
1942	16	1,230	1,651	40	6,892	1,509	1,276	12,614
1943	37	1,337	1,901	45	5,873	656	1,173	11,022
1944	42	1,402	2,216	62	6,593	545	1,096	11,956
1945	35	1,780	2,922	37	7,261	440	1,026	13,501
1946	38	1,574	3,971	70	7,339	654	1,105	14,751
1947	34	1,346	2,887	56	7,701	1,279	1,067	14,370
1948	28	1,598	2,257	68	7,641	513	973	13,078
1949	20	1,772	2,327	42	10,504	655	1,078	16,398

Dry Buttermilk Output Largest Since 1945

Dry buttermilk production for 1949 was 49,359,000 pounds, the largest total since 1945; it was up 18 percent from the preceding year. Volume of Minnesota's production was practically unchanged from the preceding year but it still maintained an impressive lead over any other State with an output of 19,646,000 pounds. Iowa ranked second with a production of 7,886,000 pounds -- a gain of 32 percent from 1948.

Dry-Casein Production Higher

Dry-casein production was 18,348,000 pounds for 1949, showing a gain of 28 percent over 1948. New York regained first rank in output, following 3 years during which California held the lead. New York made 4,188,000 pounds in 1949, a gain of 34 percent from 1948. California, with 4,059,000 pounds, was 20 percent below the preceding year. Minnesota ranked third, Wisconsin fourth, and Vermont fifth.

(C) UPDATA 1981

Dry Whey At Record High

Production of dry whey showed a sharp gain over 1948, establishing a new high record of 158,957,000 pounds. Wisconsin maintained a substantial lead over any other State with an output of 76,216,000 pounds. Minnesota, the second State, produced 18,439,000 pounds.

Condensed Skim Milk (Bulk Goods)

Plain condensed skim milk for 1949 was the highest on record, whereas sweetened condensed skim milk was the lowest since before the war. At 535,844,000 pounds, volume of plain condensed skim milk was 8 percent above the preceding year. Wisconsin, with 104,477,000 pounds of plain condensed skim milk ranked first in output. Other States in order of their volume are: New York, California, Kansas, Illinois, Pennsylvania, Michigan, Missouri, Ohio, and Virginia. The output in the United States of sweetened condensed skim milk was 218,209,000 pounds for 1949, 9 percent less than in the preceding year. Pennsylvania ranks first with 39,529,000 pounds, followed by New York, Wisconsin, Illinois,and Ohio.

Milk Sugar Production Slightly Lower

Crude milk sugar production for 1949 totaled 24,033,000 pounds, down 2 percent from the preceding year. Refined milk sugar, technical grade, at 4,466,000 pounds, made a gain in volume of 35 percent. Production of refined milk sugar, U.S.P. grade, was 8,592,000 pounds, marking a decline from 1948 of 9 percent.

* Revised.
1/ Includes whey butter.
2/ Cream cheese only.
3/ Included in "All Other Varieties of Cheese" prior to 1943.
4/ Excludes full skim cheddar and cottage cheese.
5/ Data not gathered on comparable basis with previous years. See cottage cheese curd and creamed cottage cheese.
6/ Comparable data for years prior to 1946 not available. Cottage cheese curd includes cottage, pot, and bakers' cheese with a butterfat content of less than 4 percent made by reporting plants. Creamed cottage cheese includes cheese with a butterfat content of 4 to 19 percent. Cottage cheese curd and creamed cottage cheese should not be added together to get a total cottage cheese figure, for while some of the cottage cheese curd is sold direct for consumption without further processing, a considerable part is creamed within the plant or shipped to another plant for creaming prior to sale.

* Less than 5 plants reporting.
1/ Includes Colby, Washed Curd, High and Low Moisture Jack, Monterey, and Granular.
2/ Comparable with data published prior to 1949 under designation of American Cheddar cheese.
3/ Not less than 33 percent butterfat.
4/ Butterfat content ranging from 20 to 32 percent, inclusive.
5/ Excluding full skim American and cottage cheese.
6/ Includes concentrated ice cream mix converted to dry ice cream mix equivalent.
7/ Number of plants not available.
8/ The production shown for frozen products includes that made by all types of plants for both wholesale and retail.
9/ Previous to 1949, separate figures were published on the production of frozen custards and frosted or frozen malted milk. Beginning with 1949, these two classifications were dropped and the production of frozen custards and frosted or frozen malted milk that did not meet the minimum standards for ice cream is listed where produced were included in the classification "Other Frozen Dairy Products." Because of this, the 1949 production of "Other Frozen Dairy Products" is not comparable with similar classification in preceding years.

* Revised. 1/ Includes Colby, Washed Curd, High and Low Moisture Jack, Monterey, and Granular. 2/ Comparable to data published prior to 1944 under designation of American Cheddar cheese.
3/ Not less than 33 percent butterfat. 4/ Butterfat content ranges from 20 to 32 percent, inclusive. 5/ Excluding full-skim American and cottage cheese.
6/ The production shown for frozen products includes that made by all types of plants for both wholesale and retail. 7/ Includes substandard ice cream in Oregon.
8/ Previous to 1949, separate figures were published on the production of frozen custards and frosted or frozen malted milk. Beginning with 1949, these two classifications were dropped and the production of frozen custards and frosted or frozen malted milk that did not meet the minimum standards for ice cream in States where produced were included in the classification: "Other Frozen Dairy Products." Because of this, the 1949 production of "Other Frozen Dairy Products" is not comparable with similar classification in preceding years.
9/ Not available for previous years.

* Revised.

1/ Includes Colby, Washed Curd, High and Low Moisture Jack, Monterey, and Granular.

2/ Comparable with data published prior to 1944 under the designation of American Cheddar cheese.

3/ Not less than 33 percent butterfat.

4/ Butterfat content ranging from 20 to 32 percent, inclusive.

5/ Excluding full-skim American and cottage cheese.

6/ Cottage cheese curd includes cottage, pot, and baker's cheese with a butterfat content of less than 4 percent, made by reporting plants. Creamed cottage cheese includes cheese with a butterfat content of 4 to 19 percent. Cottage cheese curd and creamed cottage cheese should not be added together to get a total cottage cheese figure, for while some of the cottage cheese curd is sold direct for consumption without further processing a considerable part is creamed within the plant or shipped to another plant for creaming prior to sale.

7/ The production shown for frozen products includes that made by all types of plants for both wholesale and retail.

8/ Production by States not shown when made by less than 3 plants.

9/ Sum of individual varieties does not equal total cheese since the production of some varieties is not shown separately when made by less than 3 plants.

10/ Previous to 1949, separate figures were published on the production of frozen custards and frosted or frozen malted milk. Beginning with 1949, these two classifications were dropped and the production of frozen custards and frosted or frozen malted milk that did not meet the minimum standards for ice cream in States where produced were included in the classification "Other Frozen Dairy Products." Because of this, the 1949 production of "Other Frozen Dairy Products" is not comparable with similar classification in preceding years.

11/ Frozen custard shown in the 1948 report has been included in ice cream since it met the minimum standards for ice cream in this State.

12/ U.S. totals for all products include production for some States not shown separately in this table except ice cream for retail and total ice cream.

• Revised.

3/ Data comparable with years prior to 1946 not available. Cottage cheese curd includes cottage, pot and bakers' cheese with a butterfat content of less than 4 percent, made by reporting plants. Creamed cottage cheese includes cheese with a butterfat content of 4 to 19 percent. Cottage cheese curd and creamed cottage cheese should not be added together to get a total cottage cheese figure, for while some of the cottage cheese curd is sold direct for consumption without further processing, a considerable part is creamed within the plant or shipped to another plant for creaming prior to sale.

* Revised.

1/ Some regional totals include production for States not shown separately. Production omitted for States in which less than 3 plants reported.

2/ Data comparable with years prior to 1946 not available. Cottage cheese curd includes cottage, pot and bakers' cheese with a butterfat content of less than 4 percent, made by reporting plants. Creamed cottage cheese includes cheese with a butterfat content of 4 to 19 percent. Cottage cheese curd and creamed cottage cheese should not be added together to get a total cottage cheese figure, for while some of the cottage cheese curd is sold direct for consumption without further processing, a considerable part is creamed within the plant or shipped to another plant for creaming prior to sale.

1/ Total whole-milk equivalent of factory dairy products calculated from production in each State as reported by the Bureau of Agricultural Economics, and pounds of fat received at plants per pound of product made and test of milk used for each purpose as determined from a survey of 1,900 plants in 46 States for the year July 1930 to June 1931. No adjustment has been made for shipments of milk and cream between States differing in the test of milk produced. Because of interstate shipments the milk equivalent of products manufactured in each State does not necessarily show utilization of milk produced in the State.
Duplication is removed on the basis of information from the survey referred to above: 201 plants making American cheese reported the sale of 0.0281 pound of buttermilk per pound of cheese made. Buttermilk from whey cream is used primarily as a source of fat in making butter. In order to avoid duplication in calculating the milk equivalent of all products made, deductions were made for the amount of fat recovered in whey cream and used for making butter, and for the amount of fat from butter and concentrated milk used in making ice cream.
2/ Milk equivalent of this product included with "Other milk products" in previous years.
3/ Includes milk equivalents of sherbet and ice milk which had been included under "Other milk products" in previous years.
4/ Includes milk equivalents of dry cream, malted milk powder, part-skim dry milk, dry or concentrated ice-cream mix, and creamed cottage cheese. The latter product was not included until 1946.

1/ Skim-milk equivalents of the skimmed milk and buttermilk products as reported by dairy manufacturing plants. Totals shown exclude skim milk and buttermilk sold in fluid form or used for some minor products.
Products included and conversion factors for converting to a skim-milk equivalent basis are: American full-skim cheese, 16.0; cottage cheese, 6.25; dried or powdered buttermilk and nonfat dry milk solids, 11; dry casein, 35.7; and 3 each for case and bulk sweetened condensed skim milk, bulk unsweetened condensed skim milk (plain condensed), concentrated skim milk (for animal feed), and condensed or evaporated buttermilk. Because of the fact that some of the skimmed milk and buttermilk products are not standardized, and because of the variations in percentage of solids not fat in skim milk and buttermilk, these conversion factors are only approximate.

2/ Not strictly comparable with previous years as the cottage cheese for previous years included some duplication in the form of creamed cottage cheese.

3/ Plain condensed.

4/ Includes skim milk for animal feed.

5/ Skimmed milk or buttermilk.
