¹ These averages are calculated by a formula designed to serve the needs of Administrators of Federal milk marketing orders. They are averages of prices at which Cheddars sold on a given date weighted by the number of cars sold. When there are no sales, the highest bid is used, if higher than the average computed for the previous week; if no sales or bids, the lowest offering price is used. When there are neither sales, bids or offers, the average of the previous week is used by Milk Administrators as the prevailing price for the week.
