Cash Receipts from Major Farm Commodities by States
as Percentage of State Totals, 1924-55

by

Harry C. Norcross
Agricultural Economic Statistician
Division of Agricultural Economics
Agricultural Marketing Service

The purpose of this publication is to show the changes that have occurred in each State over the past 30 years in the sources of cash receipts to farmers from marketings of crops and livestock.

There are now approximately 150 different commodities that contribute to the total agricultural income of the country. Only about 30 of these items are included in the livestock category and the rest are crops. No one State reports the sale of all of these commodities. The number sold tends to run larger in the West Coast States and in Texas. In some of the range States like Nevada and Wyoming, in part of the spring wheat States, and in many of the Northeastern States, the number of commodities produced and sold is smaller.

The present pattern of commodity participation in the agriculture of any particular State is the product of an evolutionary process. Because of the increase in population, the expansion of markets, the change in tastes, the growing need of agricultural products in industry, the variation of foreign requirements, etc., commodity demand has always been changing both in quality and variety. Agricultural producers try to meet these changing needs. The result has been a tremendous change in the long-run character of agricultural production in nearly all States and regions. The westward movement of livestock production and grain growing in the 19th century is a well-known phase of our agricultural history. In more recent years we have seen, among other changes, the decline in the sales of butter-fat in most of the dairy sections, the expansion of the broiler industry in Georgia and the Del-Mar-Va area, the extension of the cotton-producing area to some of the Western States, and the increase in soybean production in many of the States in the central part of the country. With these shifts in production have come comparable changes in the kinds of commodities and the quantities of each commodity marketed in each State.

The combination of these highly variable quantities with constantly changing prices has resulted in values of marketings that differ a great deal from year to year for the same commodity and for the total of all commodities in the same State. Consequently, the share that each commodity has contributed to the total of cash receipts in any State has generally been extremely variable.

The basic data used are the annual estimates of cash receipts from farm marketings by States as computed in the Farm Income Branch of the Agricultural Marketing Service. The annual estimates of cash receipts from each of the 12 most important commodities in each State was divided by comparable estimates of total cash receipts to obtain percentages representing the commodity contribution to the State total. These commodity percentages are shown in tabular form at 5-year intervals from 1924 to 1954 plus 1955 for each State and for the United States. The percentages for a few of the most important commodities in each State and the United States are shown annually from 1924 to 1955 in charts so that their trend may be seen more clearly.

The data on average size of farms, the percent of commercial farms in 1949 and 1954, and cash receipts from farm marketings, total and per farm, were included as relevant information. Figures in the first two columns were taken directly from Census reports. The third column contains the totals of cash receipts used as a basis for the individual commodity percentages. The commodity estimates of cash receipts that were used in working out the percentages are components of the total cash receipts shown. These estimates, with those for "Other," add to total cash receipts. The percentages used in the charts were obtained from the same data, but were worked out annually instead of every 5 years.

It is expected that the estimates on cash receipts will be revised back to 1950 within the next year or two. This will be done by commodities, by States, and for the United States. However, it is felt that the greatest value of the publication will not be found in the exactness of the data for any particular commodity or year, but rather in the general direction of the trends in the commodity percentages and the shifts in the commodity composition of total cash receipts in the long run. It is not expected that the revisions will make any significant change in these over-all trends or in the relative importance of cash receipts from different commodities in the totals.

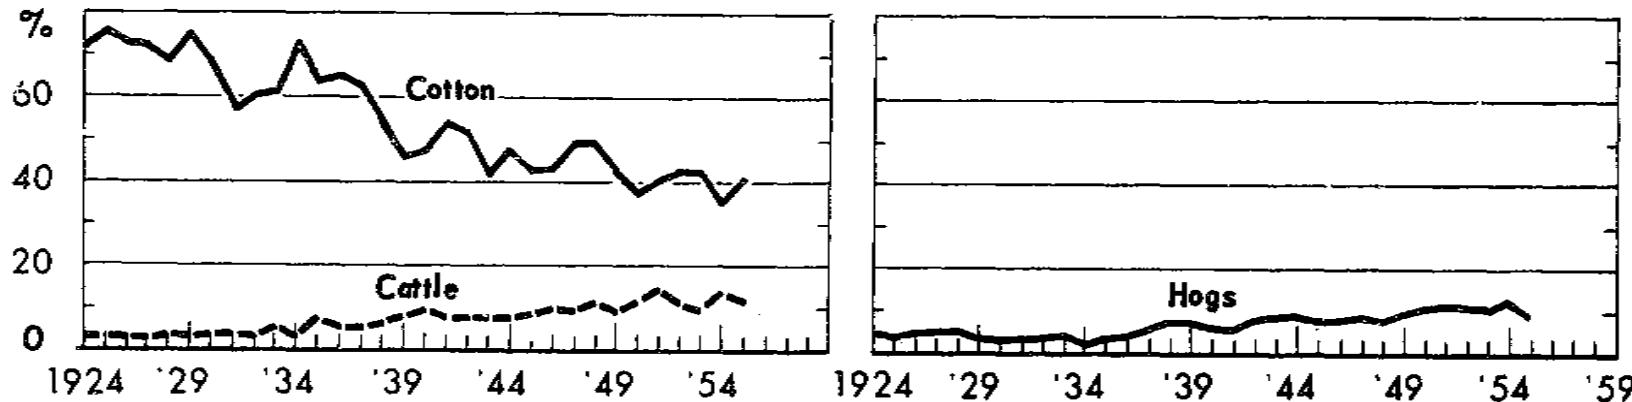

Martin Sorkin of the Commodity Stabilization Service helped plan this publication.

Note on Chart Labels

Dairy products include wholesale and retail milk, butter-fat, and farm butter.
Milk includes wholesale and retail milk.
Poultry products include eggs, chickens, broilers, turkeys, and other poultry.
Fruits in Oregon include fruits and nuts.
Cotton includes cotton lint and cotton seed.
Cattle include cattle and calves.
Sheep include sheep and lambs.

Alabama

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

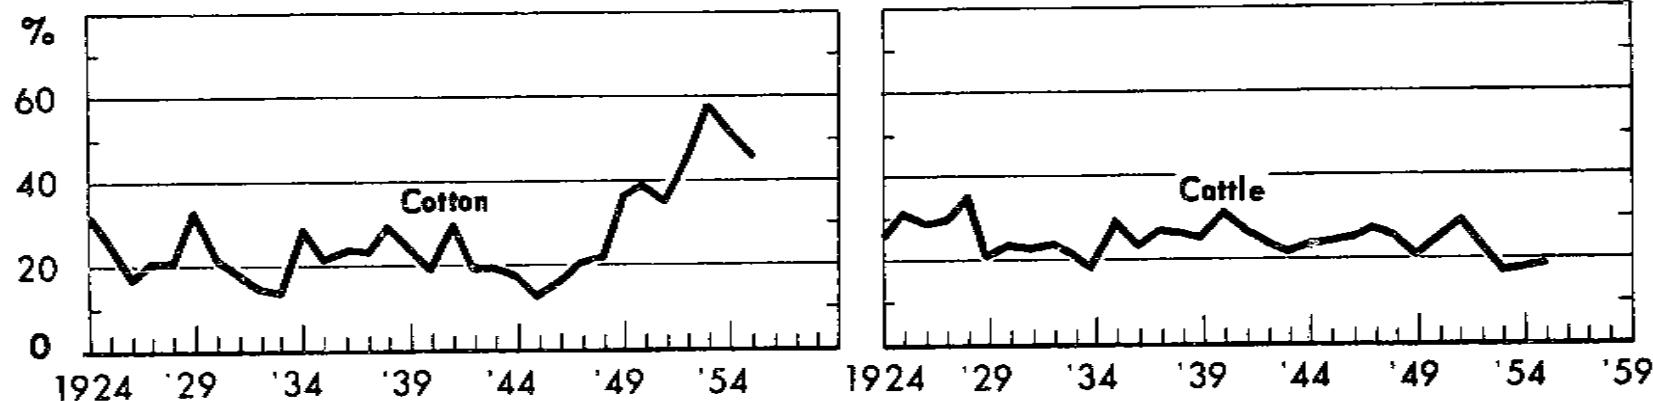

Cotton has declined in importance in Alabama since 1924, with cash receipts from cotton dropping from about 70 percent of total cash receipts in the early period to about 40 percent in recent years. However, broilers as well as cattle and hogs have been increasing in relative importance.

Year	Farms		Cash receipts from farm marketings		Percentage of total cash receipts

Arizona

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

The percentage of cash receipts from cotton has increased sharply since 1945, to about 50 percent of the total. Cattle varied between 20 and 30 percent for most years, but have remained below 20 percent since 1952.

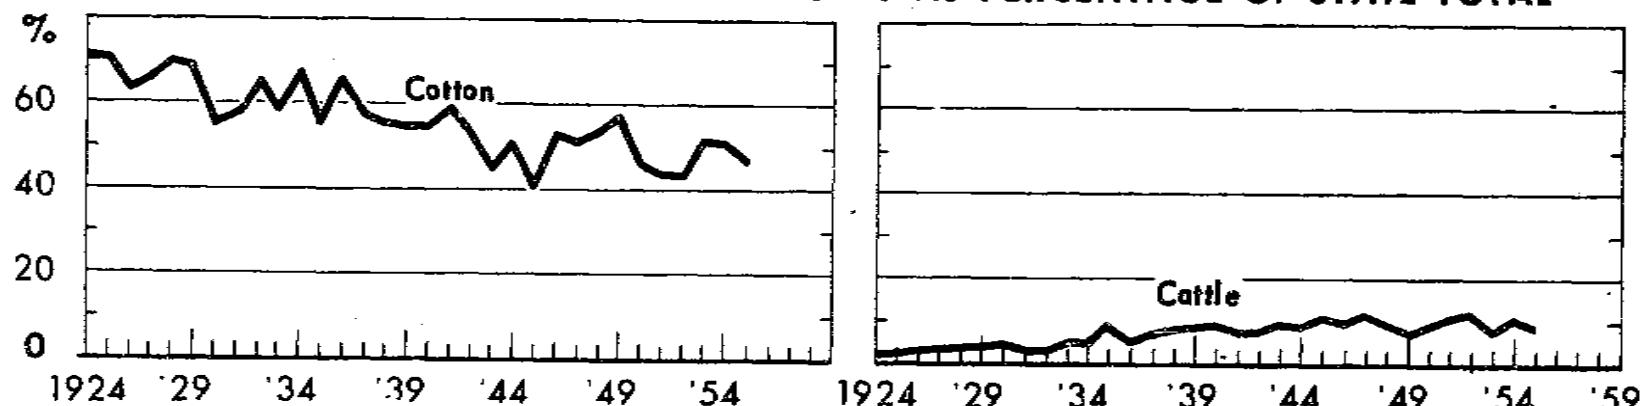

Year	Farms Average size	Cash receipts from farm marketings		Percentage of total cash receipts

AMS NEG. 3205 - 55 (4)

Arkansas

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

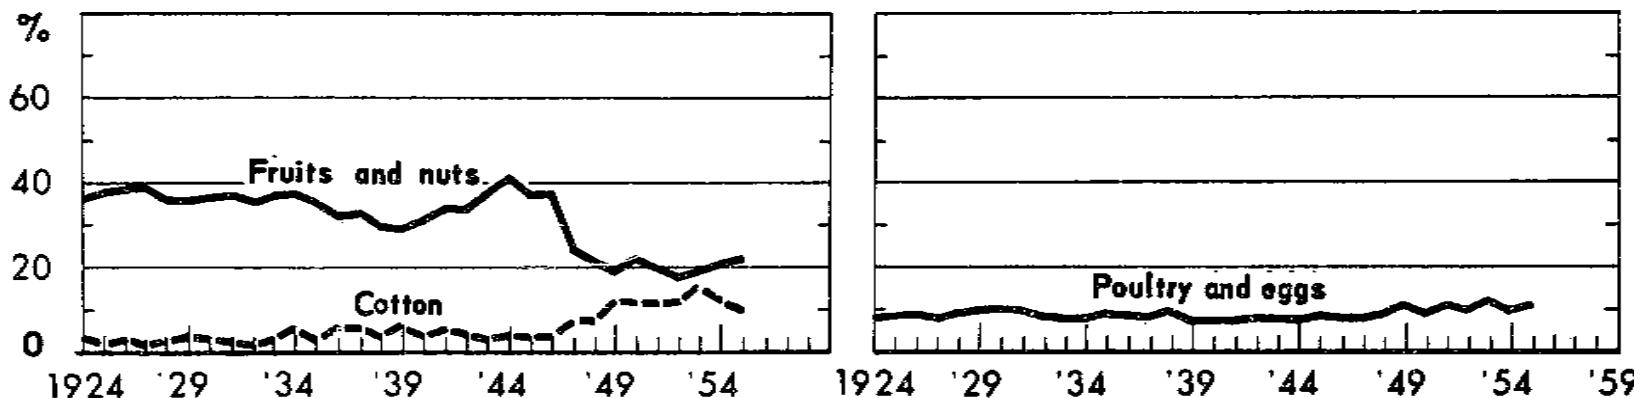

Cotton's share in total cash receipts in Arkansas has declined from 70 percent in the early part of the period to 46 percent in 1955. Receipts from cattle rose gradually from 2 percent in 1924 to 10 percent in 1945, and have remained near that level. Broilers and soybeans have both shown rapid increases since 1934.

California

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

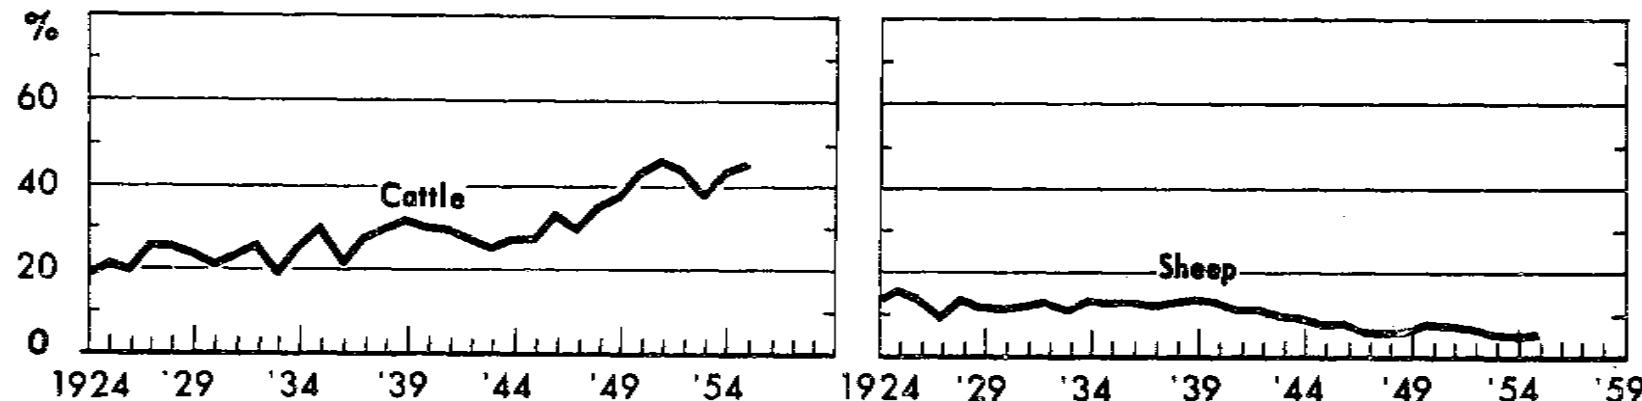

Cash receipts from fruits and nuts in California were close to 40 percent of total receipts in the early years. However, they declined to a low of 29 percent in 1939, rose again to 41 percent in 1944, and then dropped off sharply to approximately 20 percent in the last 7 or 8 years. Cotton has increased considerably since 1946. Cattle as well as poultry and eggs have remained near the 10 percent mark most of the time.

Colorado

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

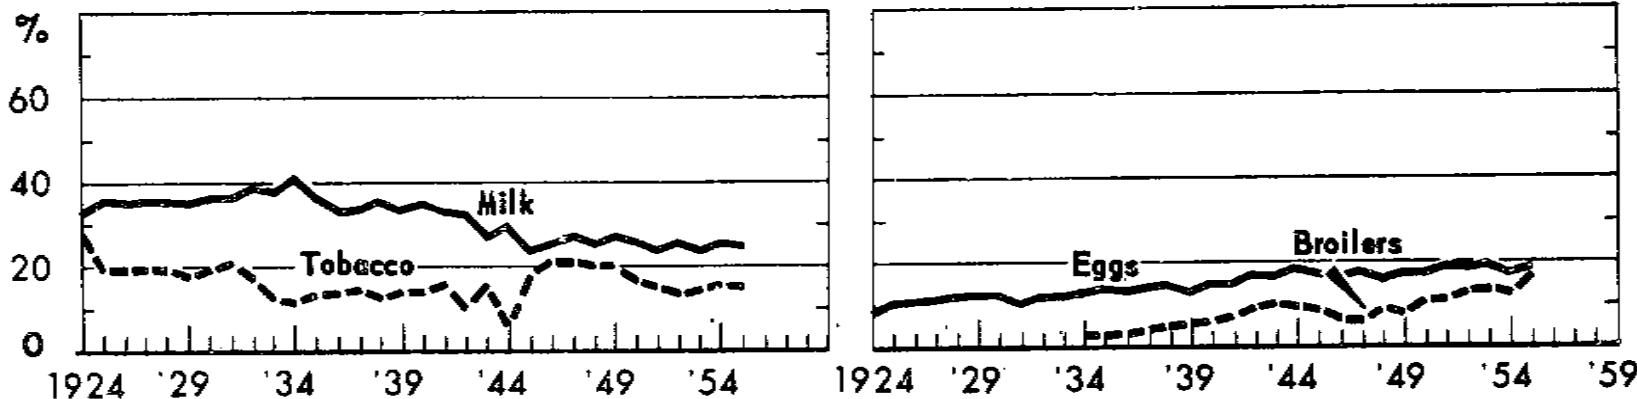

Cash receipts for cattle in Colorado ran from 20 to 30 percent of total cash receipts in most years from 1924 to 1943. An upward movement started in 1944, and in recent years they have been 40 percent or more of the State total. Receipts from sheep were quite steady at about 12 percent of total receipts until 1943. The gradual decline which started at that time has resulted in a drop to 5 percent for recent years.

Connecticut

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

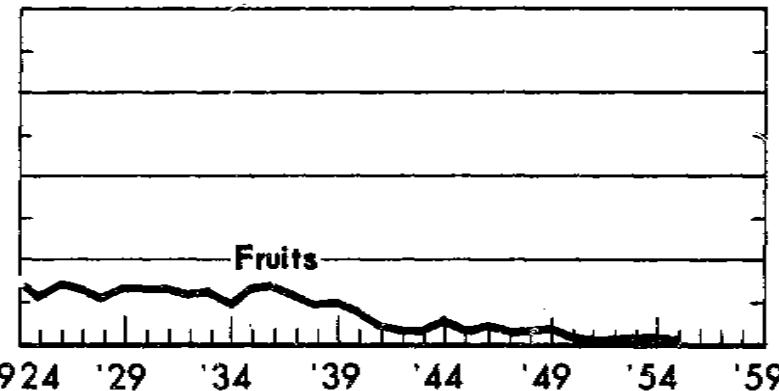

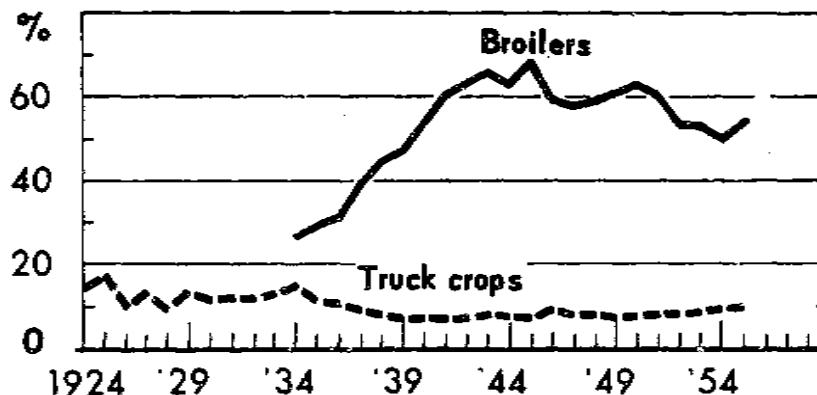

Cash receipts from milk reached a high point of 41 percent of the State total in 1934, but have since declined to about 25 percent. Tobacco has generally remained between 10 and 20 percent of total receipts. Eggs rose over most of the period and now account for 20 percent of total receipts. Broilers have been climbing steadily and are now nearly as important as eggs.

Delaware

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

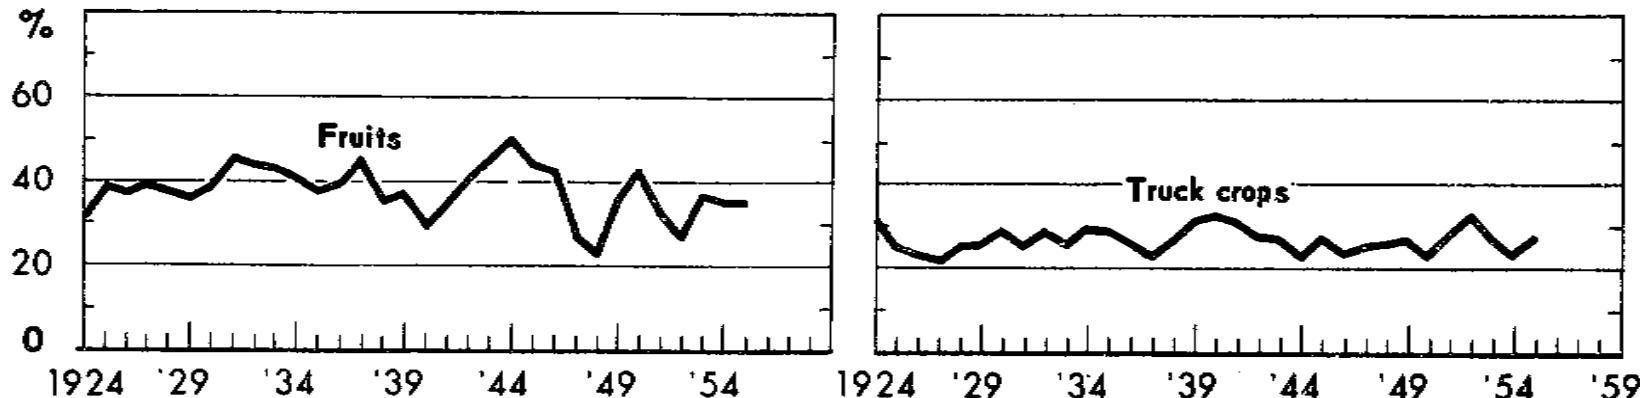

Cash receipts from broilers in Delaware rose from 26 percent of total receipts in 1934 to 68 percent in 1945. Since then they have declined slightly. Truck crops have declined from around 15 percent of the total in the early part of the period to about 8 percent in recent years. Fruits remained around 10-15 percent until 1937. Since then they have declined steadily and are now a negligible item.

Florida

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

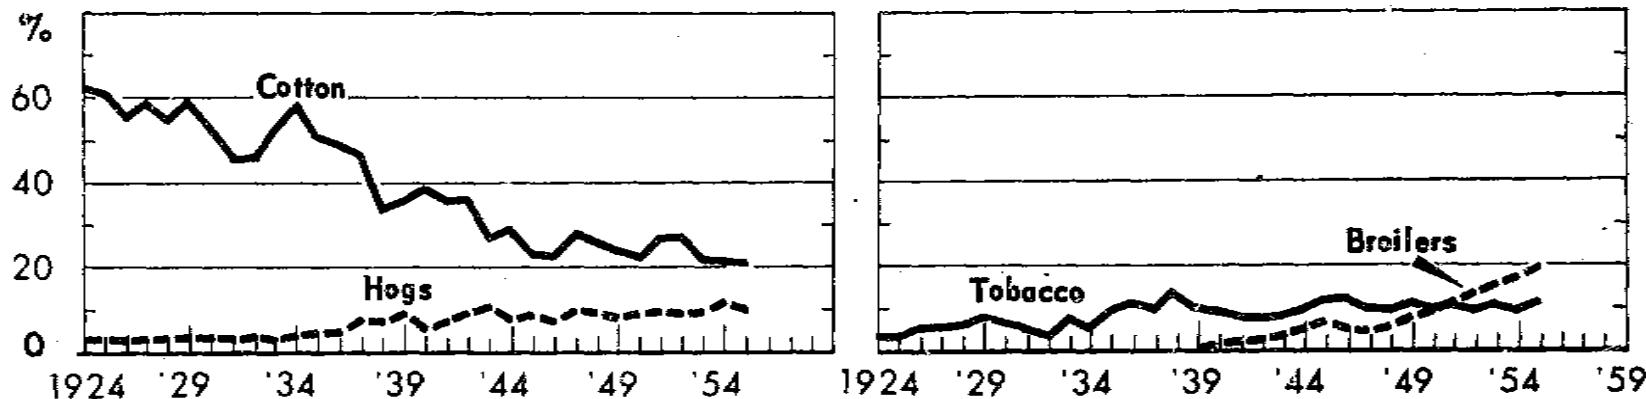

Cash receipts from fruits in Florida as a percentage of total cash receipts have fluctuated widely since 1924, with a slight downward tendency discernable from 1931 to date. Receipts from truck crops have been quite stable at from 20 to 30 percent of the total.

Georgia

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

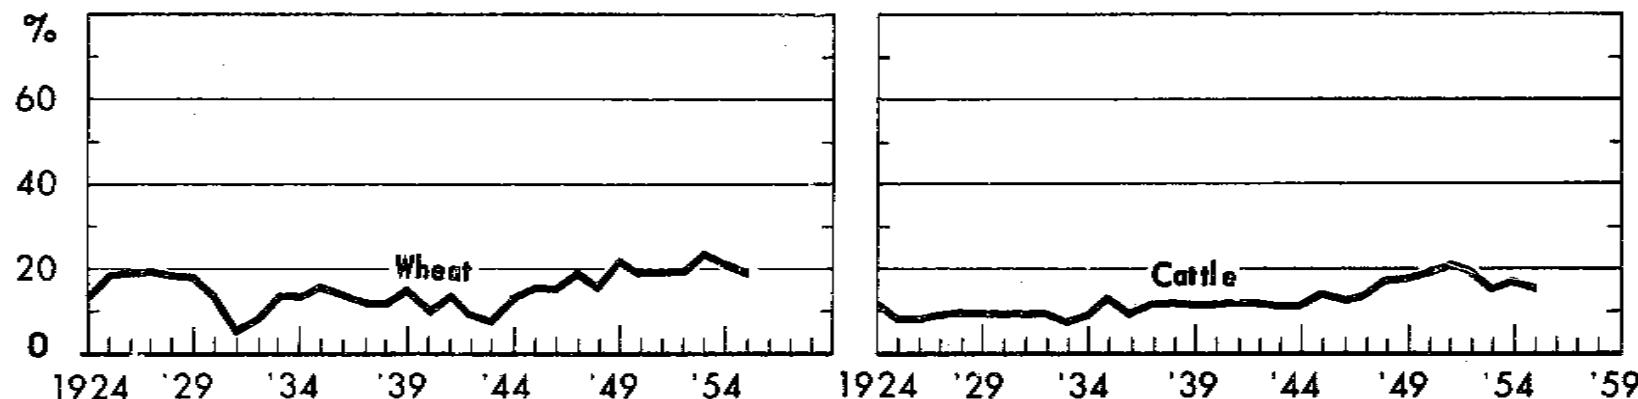

Receipts from cotton accounted for nearly two-thirds of the 1924 total of cash receipts in Georgia, but only one-fifth of the 1955 total. However, both hogs and tobacco were more than 3 times as important in 1955 as in the early years. Broilers have risen sharply during the past 20 years, and are now almost as important as cotton.

Idaho

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

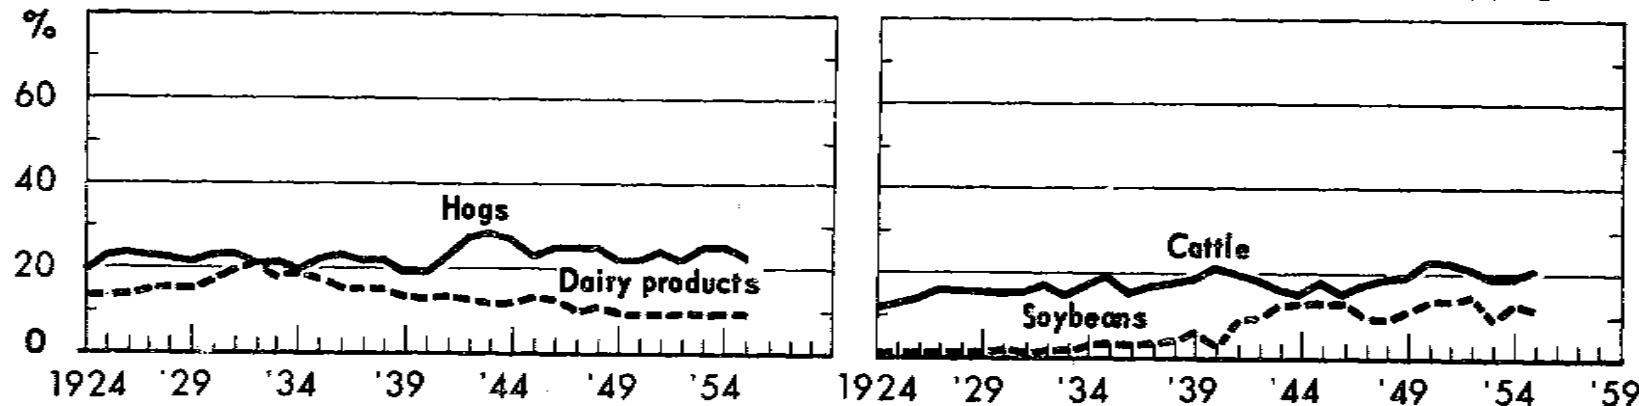

Cash receipts from wheat in Idaho dropped from around 20 percent of the total in the early part of this period to 5 percent in 1931. During the next 12 years they were between 10 and 15 percent most of the time. In 1945 they started up, and during the last 7 years have been around 20 percent again. Receipts from cattle were between 5 and 10 percent for most years before 1944. Since then they have been mostly between 15 and 20 percent. There were sharp declines over this period in the relative importance of the sheep industry, hay and butterfat. The importance of wholesale milk and sugar beets increased.

Illinois

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

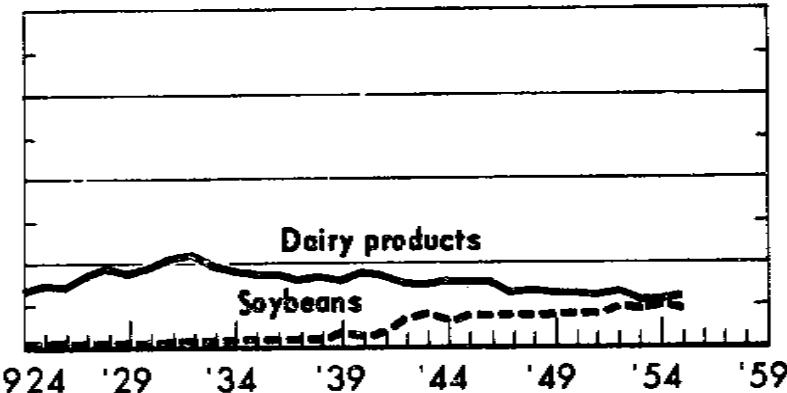

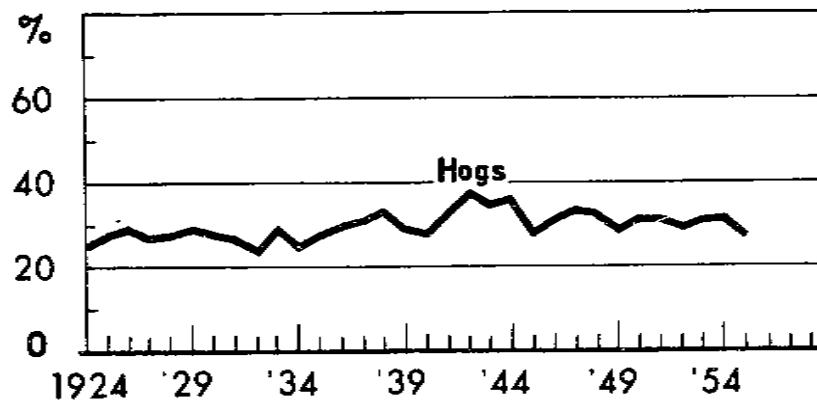

Cash receipts from hogs have generally varied between 20 and 25 percent of total cash receipts in Illinois. Receipts from dairy products rose to nearly a fifth of the total in the early 1930's, but they are now less than 10 percent. Receipts from cattle have risen quite steadily from 11 percent of total receipts to about 20 percent, and soybeans have shown even a sharper increase in relative importance. In addition to the commodities shown in the chart, corn is another important source of cash receipts in Illinois.

Indiana

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

Hogs have generally contributed around 30 percent of total cash receipts in Indiana. Dairy products rose to a high of 22 percent in 1932 and then gradually declined to the current level of about 12 percent. Receipts from soybeans have risen quite consistently over the entire period and now account for about 10 percent of the State total. Cattle are also of some importance as a source of cash receipts in Indiana.

AMS NEG. 3215 - 56 (4)

Iowa

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

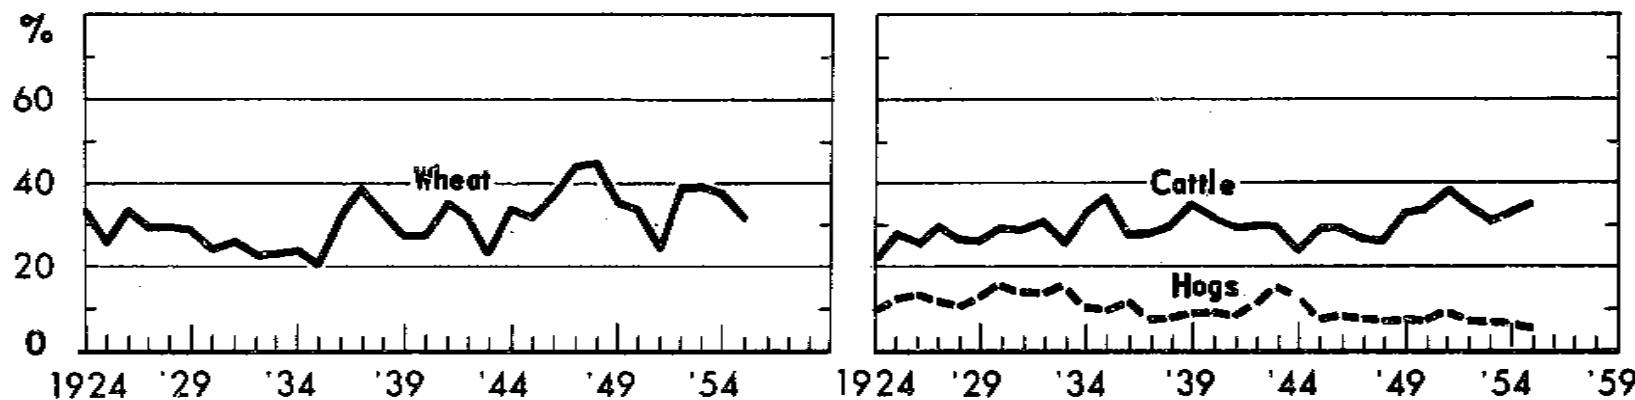

The percentage contributions of hogs and cattle to total cash receipts from all farm marketings in Iowa have been fairly steady over the last 30 years, with hogs providing from 30 to 40 percent of the total and cattle from 20 to 30 percent. Soybeans, a new crop, increased from 0 to 5 percent. The relative importance of butterfat and chickens has declined.

Kansas

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

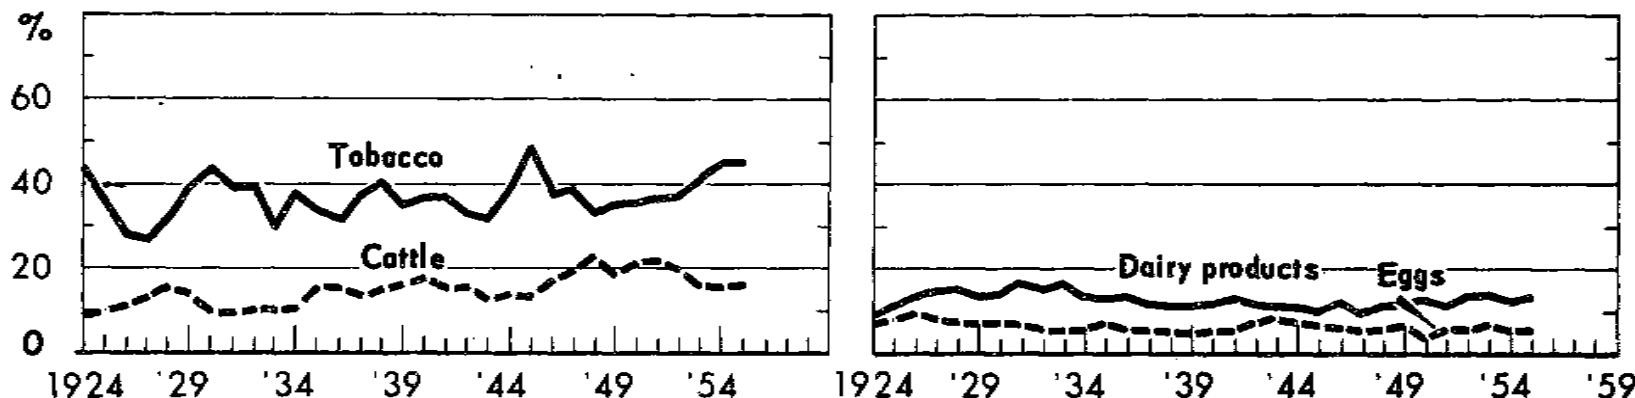

Wheat and cattle each contribute about one-third of total cash receipts in Kansas; and each shows some evidence of a slight upward trend in relative importance. Cash receipts from hogs, starting at a lower level, have gradually dropped to about half their former importance.

Kentucky

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

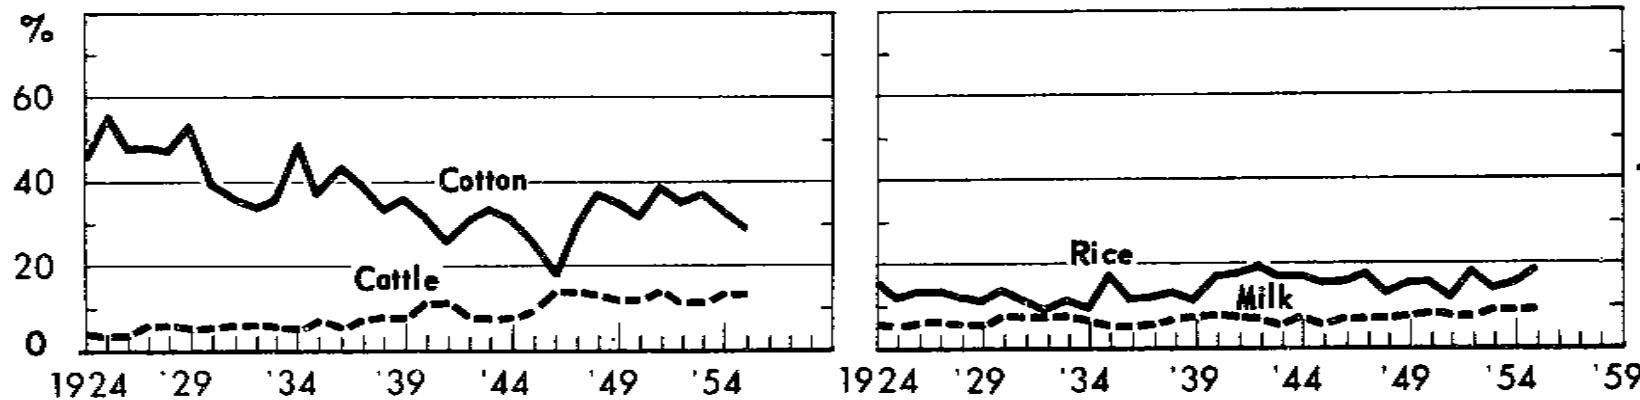

The composition of Kentucky agriculture has been quite stable over the past 32 years. Cash receipts from tobacco have been running mostly from 30 to 40 percent of total cash receipts from farming, and cattle from 10 to 20 percent, with a slight upward inclination in both cases. Dairy products have generally been from 10 to 15 percent and eggs from 5 to 10 percent of total cash receipts.

Louisiana

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

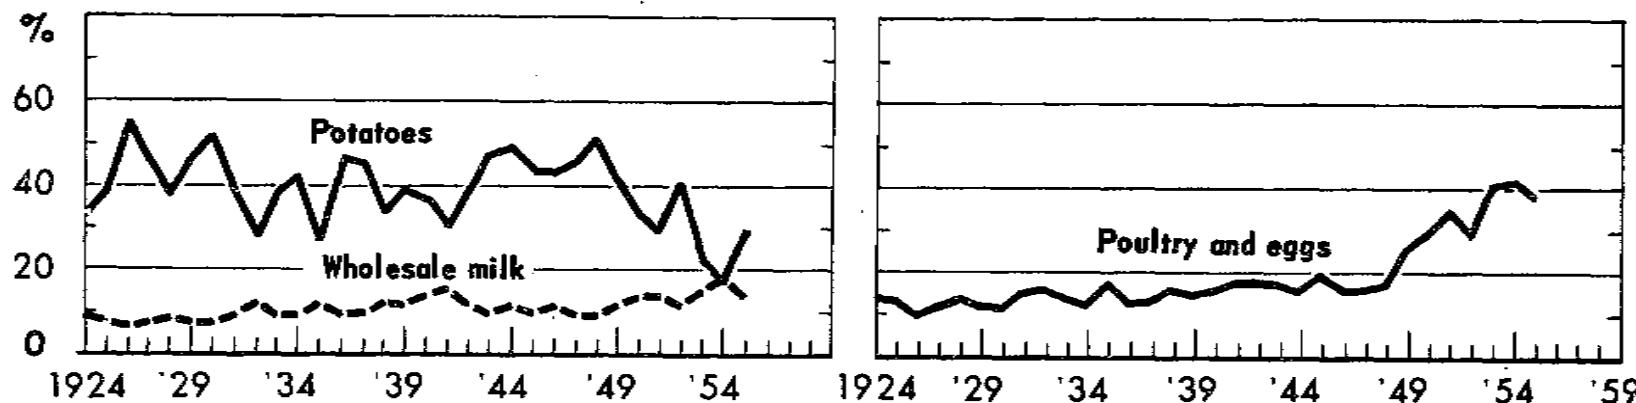

Cash receipts from cotton as a percentage of total cash receipts in Louisiana dropped sharply from 1924 to 1946, but have since levelled off at about one third of the total. Cattle rose gradually to a recent level of 10-14 percent. Receipts from rice and from milk are also relatively more important now than in previous years.

Maine

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

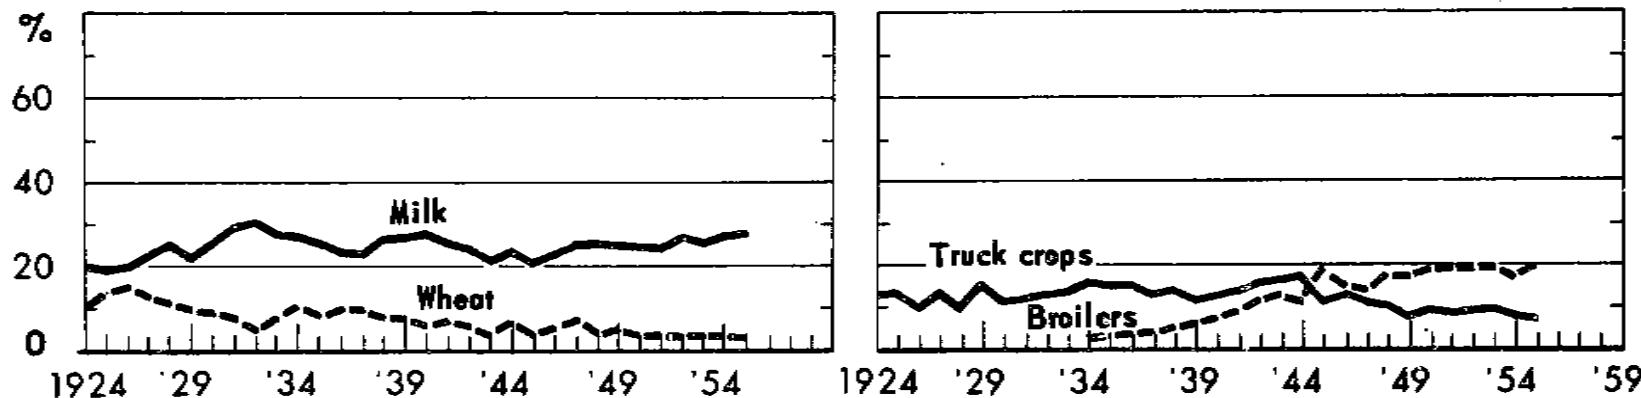

During most of the period, potatoes were the largest contributor to farm income in Maine, furnishing nearly half of total cash receipts. As they have declined in recent years, however, they were overtaken by poultry and eggs in 1951, and their unusually small percentage in 1954 was equalled by wholesale milk. Potatoes showed some recovery in relative importance in 1955.

Maryland

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

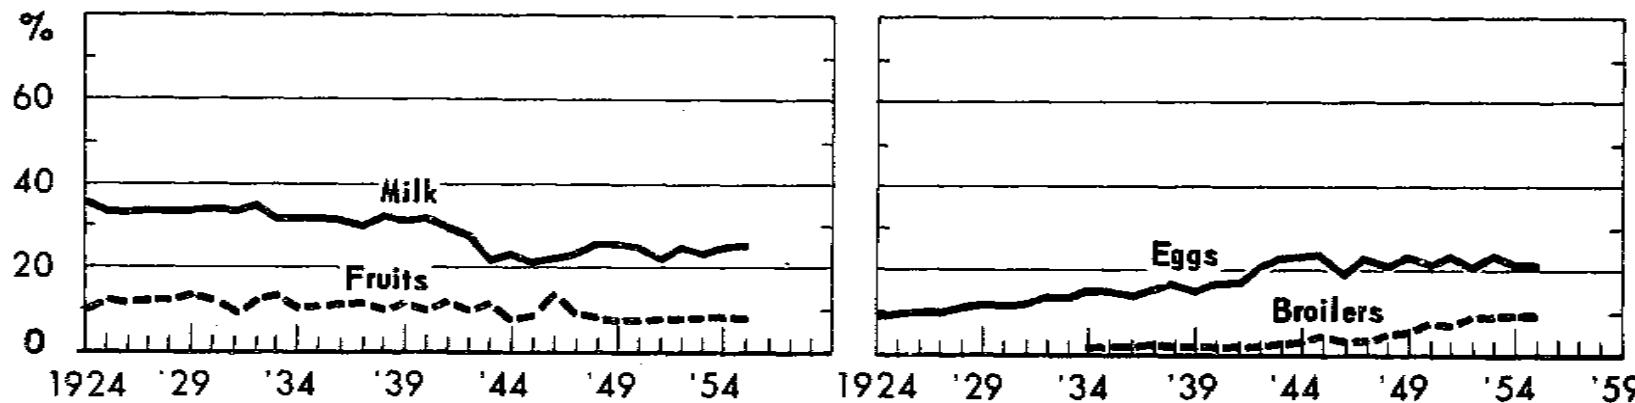

Cash receipts from milk have generally been between 20 and 30 percent of total cash receipts in Maryland. Wheat declined from about 13 percent of total receipts in the early period to only 3 percent in recent years. After fluctuating between 10 and 15 percent of total receipts in most years from 1924 to 1944, truck crops started downward in 1945 and contributed only 6 or 7 percent recently. Broilers have increased steadily in relative importance in the last 20 years.

Massachusetts

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

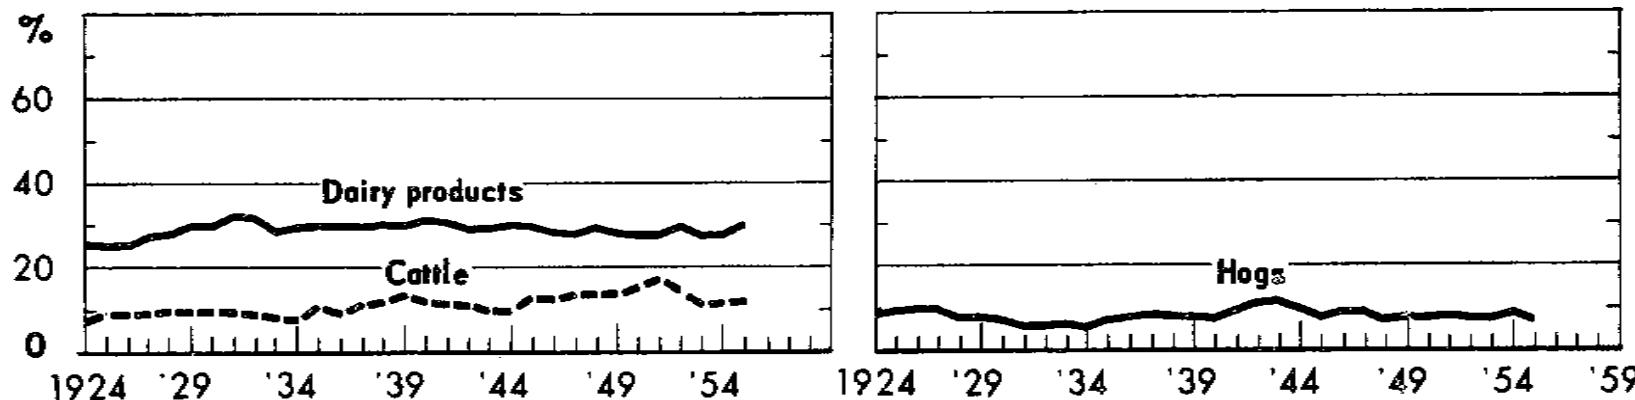

For nearly 20 years milk was the most important farm commodity in Massachusetts, running close to one-third of total cash receipts. By 1943, however, milk had declined to 22 percent of the total and was overtaken by eggs, which had risen gradually from about 10 percent in the early years of the period. Since then both milk and eggs have levelled off at 20-25 percent of total receipts. Fruits contributed 10-12 percent of the total for most of the period, but declined to about 7 percent in the past 10 years. Broilers rose quite steadily from their first recording in 1934, and reached 10 percent in 1955.

Michigan

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

The percentage contribution that dairy products have made to total cash receipts in Michigan has been relatively stable at 25-30 percent. Cattle show a slight upward trend in relative importance, but hogs have been quite steady at 5-10 percent of total receipts.

AMS NEG. 3223 - 56 (4)

Minnesota

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

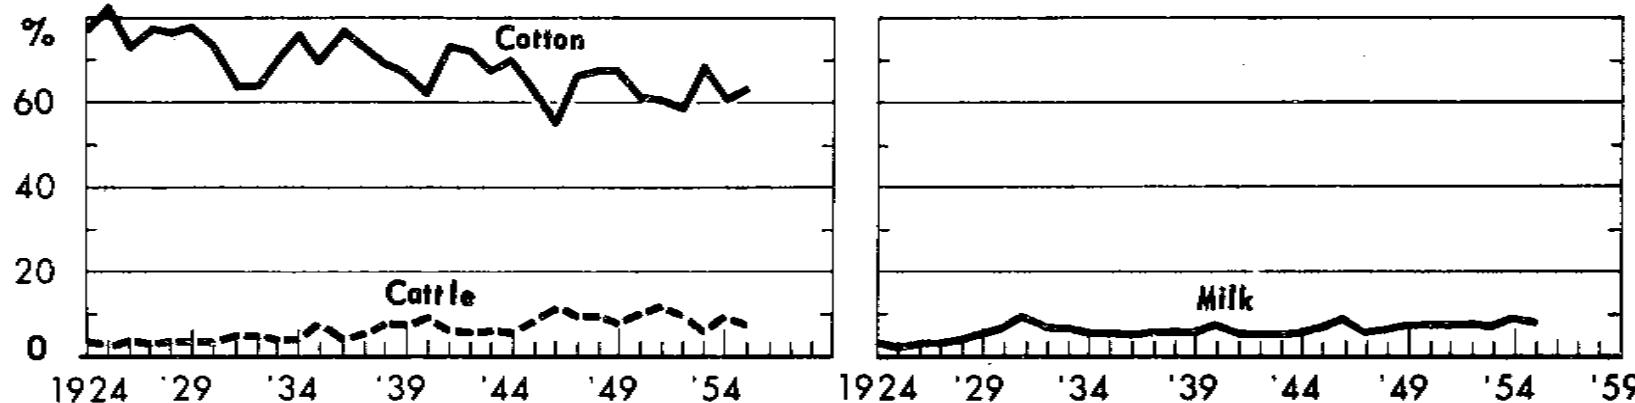

During the past 20 years cash receipts from dairy products have declined in importance to Minnesota agriculture, and have been less than one-fifth of total cash receipts from all farm marketings in some recent years. Receipts from cattle rose from 9 percent of total receipts in 1924 to 21 percent in 1950, and have since been at about the same level as dairy products. Hogs have been quite steady at 20 to 30 percent of total receipts for most years. The percentage of receipts from corn, turkeys, eggs, and soybeans has increased.

Mississippi

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

Although cotton is still by far the most important contributor to cash receipts from farming in Mississippi, it has declined noticeably since 1924. Increases in the percentage of total receipts furnished by cattle, soybeans, broilers and wholesale milk have helped to make up for the drop in cotton's share.

Montana

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

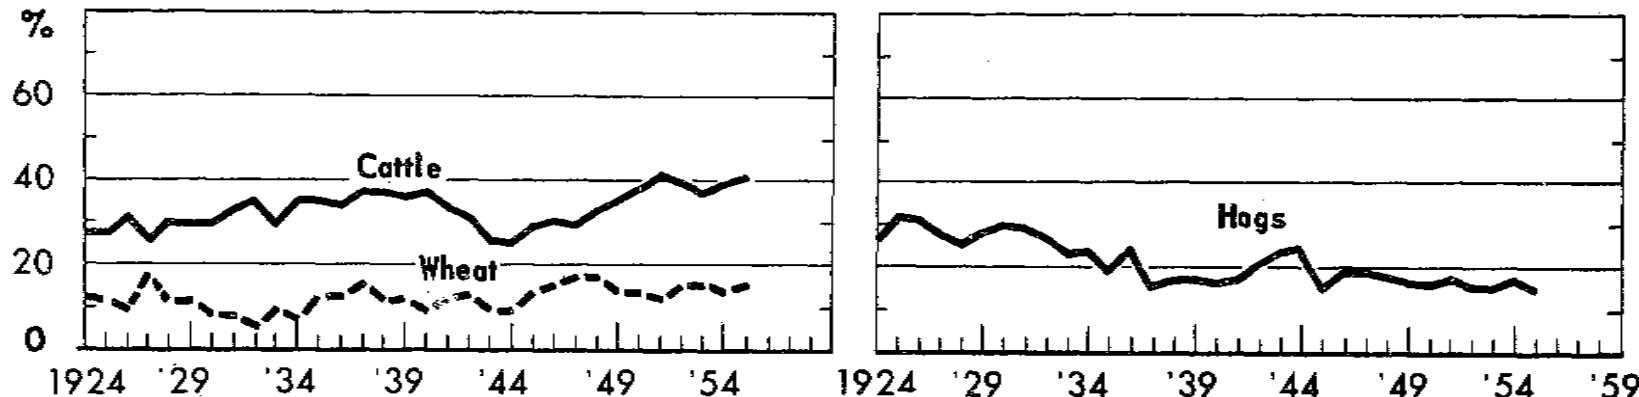

Except during the mid-1930's, cash receipts from wheat have generally been from 30 to 40 percent of total cash receipts in Montana, but the percentage has been considerably higher since 1952. Prior to 1945, cattle usually accounted for about 20 percent of total receipts, but during the past 10 years receipts from cattle have generally been 25 percent or more of the total, reaching nearly 40 percent in 1951. Sheep and wool rose gradually to a high of 22 percent in 1934, but had declined again to only 5 percent by 1955.

Nebraska

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

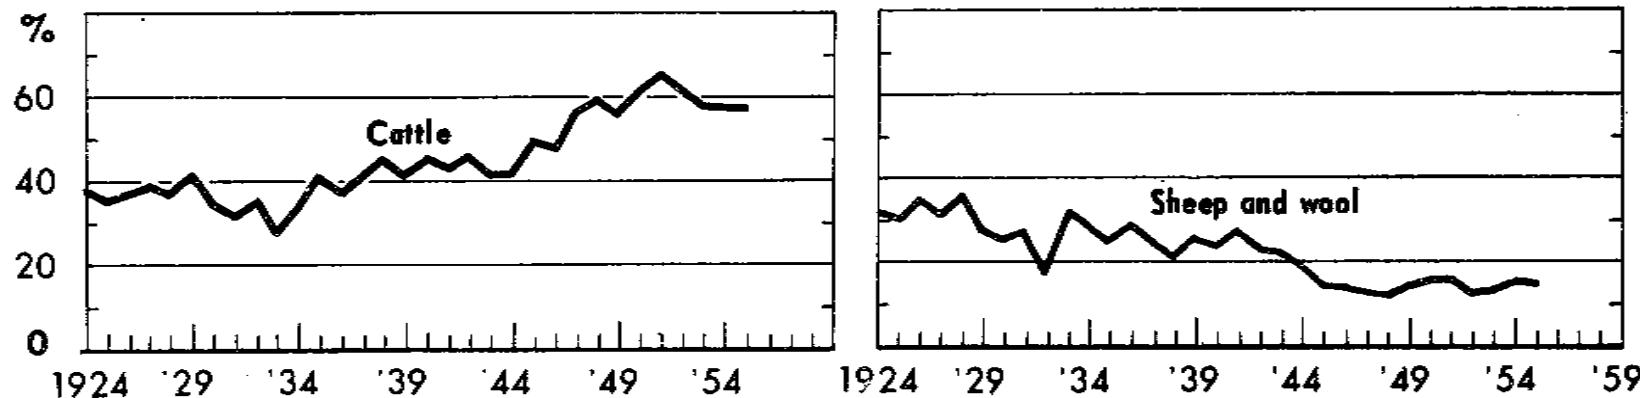

Cattle rose gradually in relative importance in Nebraska during the first half of the period shown, reaching 37 percent of total receipts in 1940. They dropped sharply during the next 4 years, but rose thereafter to a high of 41 percent in 1955. Receipts from wheat have been relatively stable, generally running between 10 and 15 percent of total receipts. Hogs have declined rather steadily from about 30 percent in the early years of the period to around 15 percent recently.

New Hampshire

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

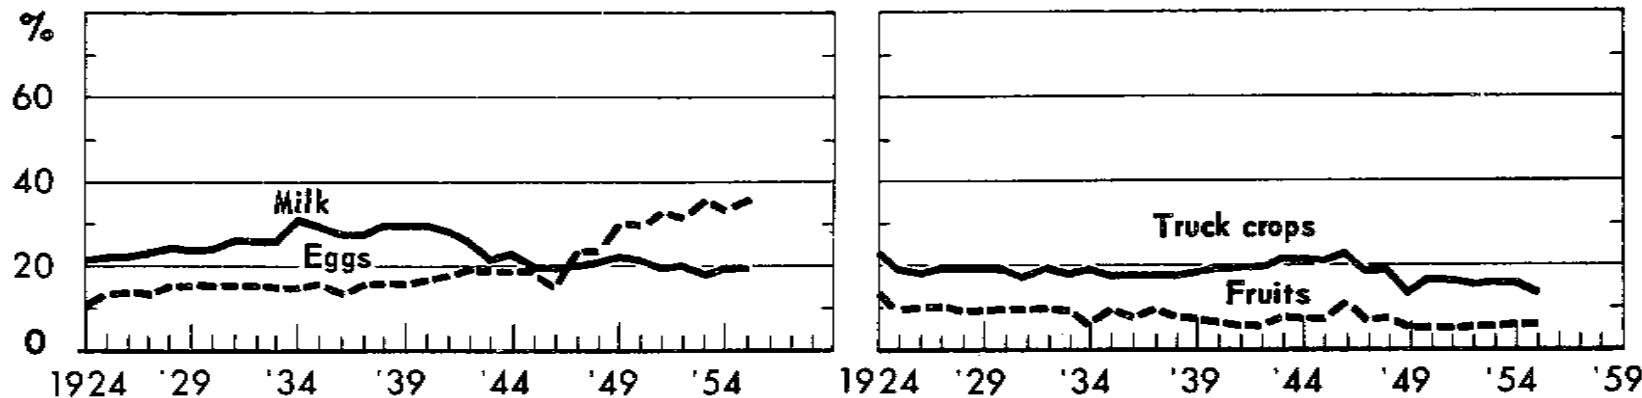

Receipts from wholesale milk now represent nearly one-fourth of total cash receipts in New Hampshire, after receding from a high of 30 percent in 1930 to a low of 19 percent in 1945. Fruits contributed about 6 percent of total receipts in the early part of the period, but have declined to 4 percent in recent years. Eggs increased gradually from around 15 percent in the early years to about 30 percent since 1949. Broilers rose sharply after 1944, and now contribute about 10 percent of the State total.

New Jersey

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

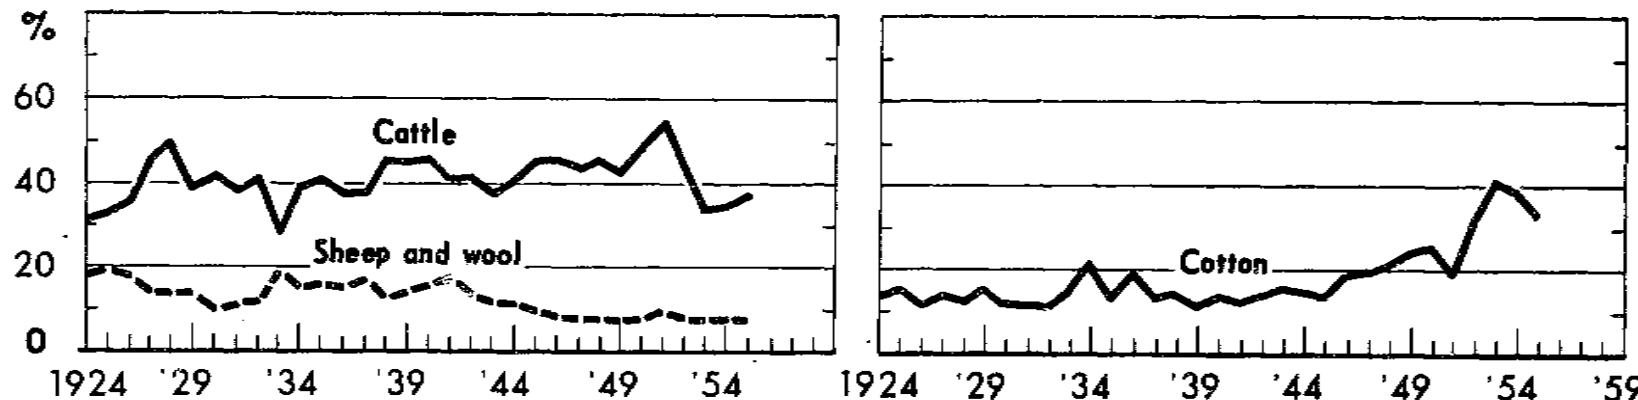

Milk, eggs, and truck crops are three mainstays of New Jersey agriculture. After running close to 30 percent of total receipts for nearly 10 years previously, milk dropped back to 20 percent in 1943 and stayed there. Eggs have gained quite steadily, but mostly in the last 10 years, and now account for more than a third of total receipts. Truck crops dropped from their previous 20-percent level in 1949, and have been between 13 and 16 percent since then. Fruits dropped gradually from around 10 percent in the early years to about 5 percent in recent years. Broilers have increased over most of the period, but potatoes have declined.

New Mexico

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

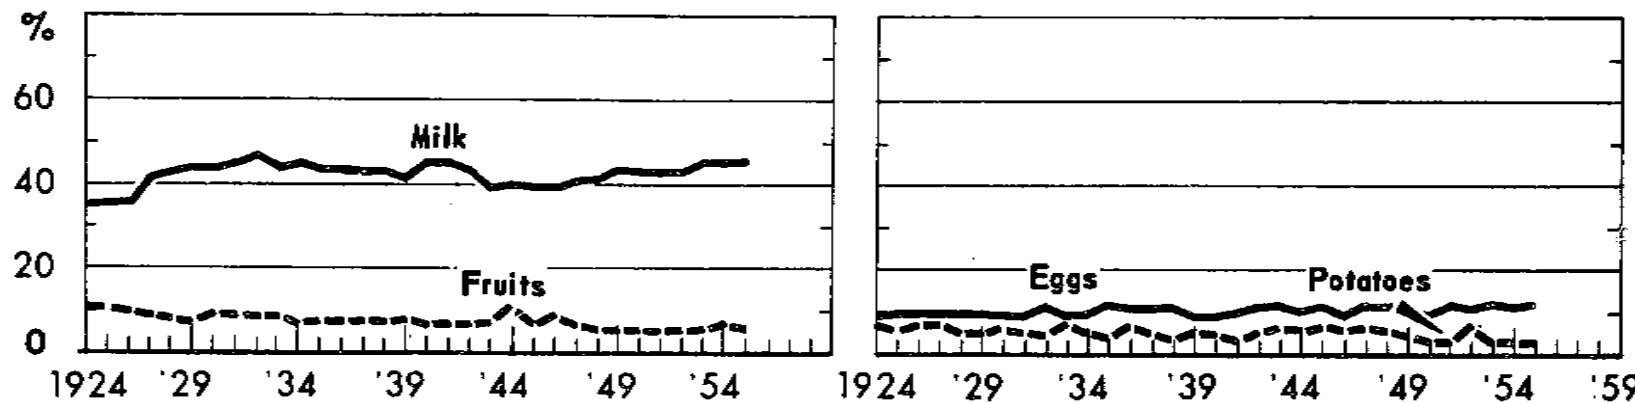

A sharp increase in the relative importance of cotton since 1945 and a gradual decline in the relative importance of the sheep industry have been the most significant trends in New Mexico cash receipts from farming. The cattle industry continues to lead all others as a producer of cash income, but there is little evidence of any trend for this item.

New York

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

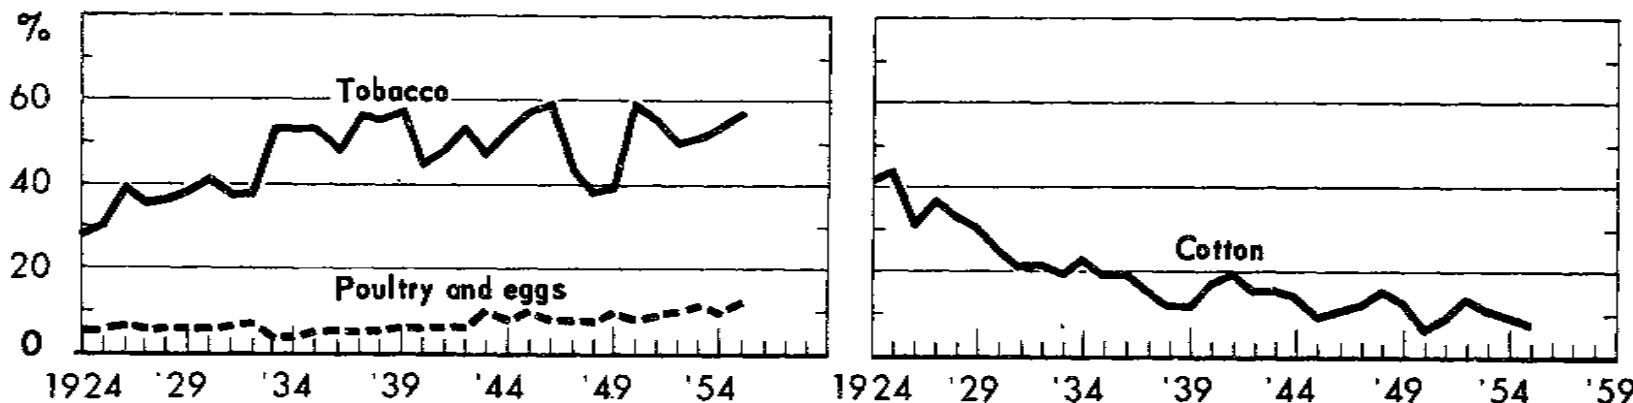

In most years, milk has furnished between 40 and 45 percent of total cash receipts in New York. Receipts from fruits have declined from 10 percent of the total to about 5 percent in recent years. Eggs, now running close to 10 percent, have shown a slight upward trend. Receipts from potatoes were about 6 percent of the total in 1924, but are nearer 3 percent now.

North Carolina

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

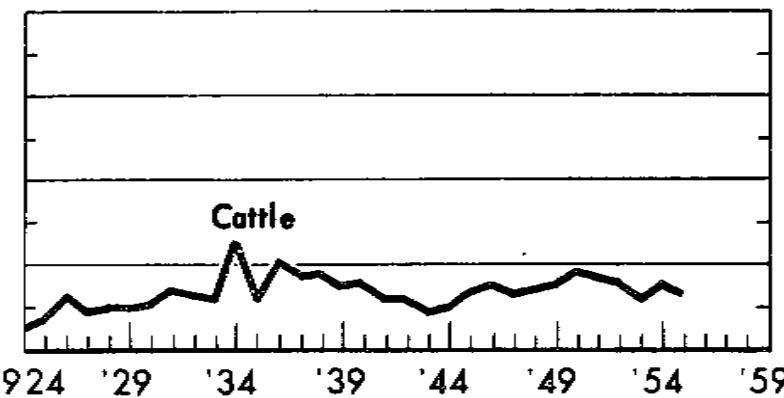

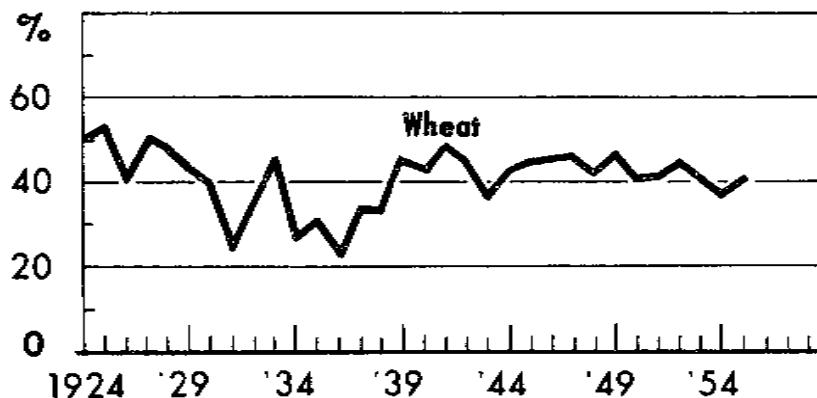

Generally below 40 percent of the total up to 1932, cash receipts from tobacco rose suddenly to 52 percent of total cash receipts in the State in 1933. Since then tobacco has been running between 50 and 60 percent of total receipts for most years. Poultry and eggs have doubled in importance since 1924, and are now about 10 percent of the total. Receipts from cotton declined sharply over most of the period, dropping from about 40 percent of total cash receipts in the early years to 7 percent in 1955.

Oklahoma

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

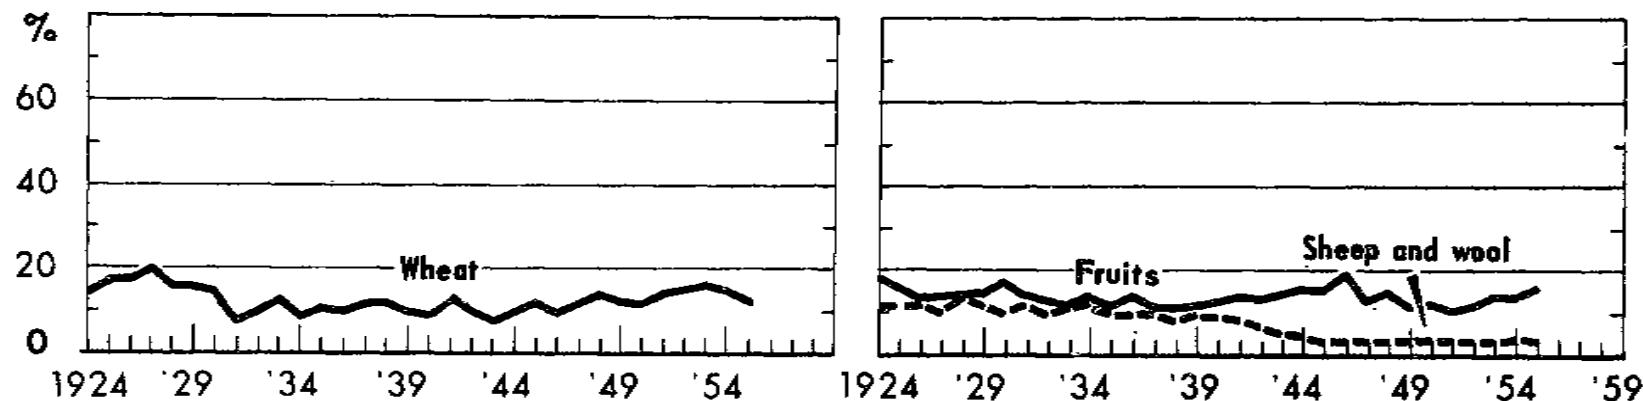

As in some other Southern States, the emphasis in Oklahoma agriculture seems to be shifting from crops to livestock and products. In 1924, cotton contributed over half of total cash receipts for the State, wheat 16 percent, and total livestock and products 23 percent. In 1955 receipts from cotton were only 15 percent of the total, and wheat 10 percent, whereas total livestock and products accounted for 61 percent. Cattle, now the largest item in the livestock category, furnished only 8 percent of total cash receipts in 1924, but 38 percent in 1955.

Rhode Island

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

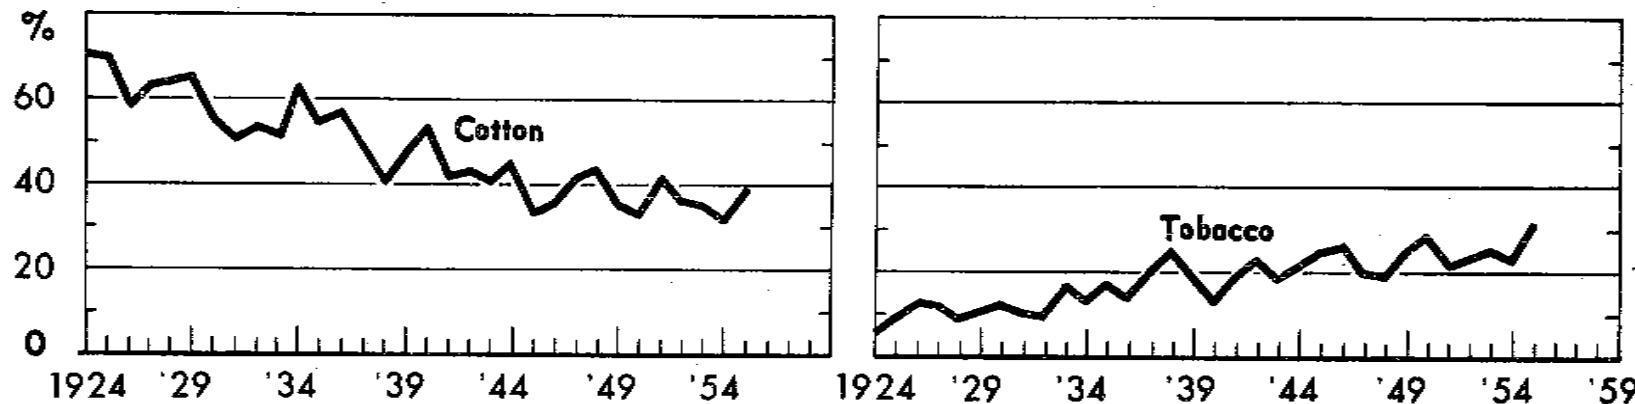

Receipts from milk declined from 44 percent of total receipts in Rhode Island in 1924 to 30 percent in 1945. Since then they have risen to nearly 40 percent of the total. Fruits have declined gradually from 6 percent in the early years of the period to around 2 percent in recent years. Eggs, starting at about 10 percent in the early years, have doubled in importance since then. Broilers began to be important in 1934, and are now contributing about 5 percent of total receipts.

South Carolina

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

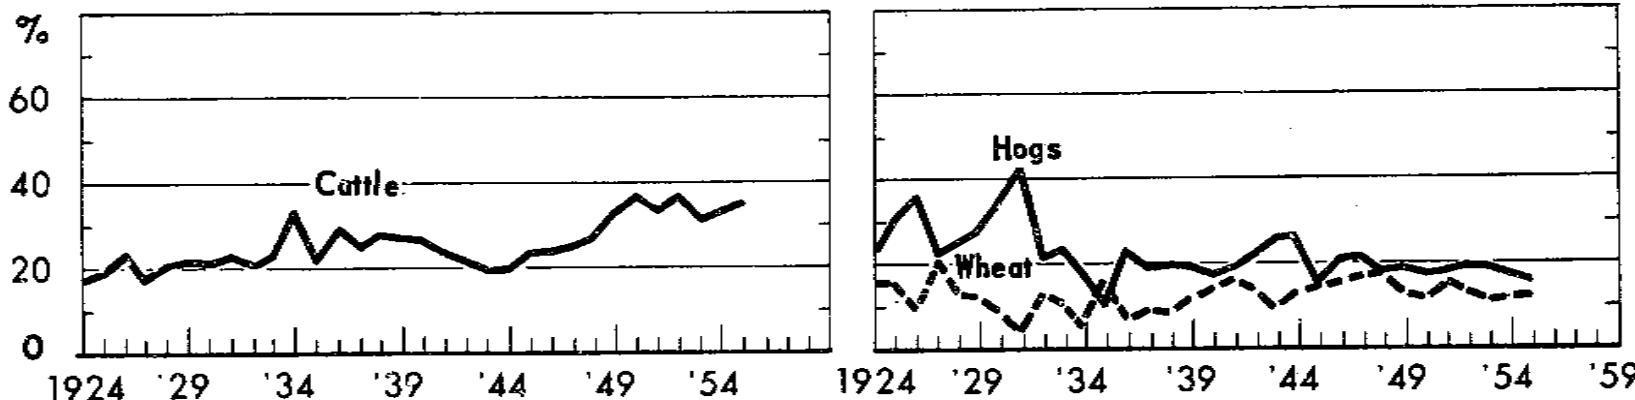

Receipts from cotton as a percentage of total cash receipts in South Carolina have dropped rather steadily since 1924, and cotton is now less than half as important as it used to be. A rise in the relative importance of tobacco, however, has nearly offset the decline for cotton.

South Dakota

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

Cattle generally accounted for from 20 to 30 percent of total cash receipts in South Dakota until 1949. Since then their contribution to total receipts has been between 30 and 40 percent. From 1924 to 1933, receipts from hogs fluctuated from 23 to 42 percent of total receipts. Starting with 1934, they were generally between 15 and 20 percent of the total for the State. Receipts from wheat have fluctuated widely and generally at a lower level than hog receipts. They were between 10 and 15 percent of total receipts for most years.

Texas

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

Cotton's share of total receipts in Texas dropped from 70 percent in 1924 to 20 percent in 1945. A partial recovery since then has resulted in percentages between 35 and 40 for recent years. Percentages for cattle and for poultry and eggs are each about twice as high now as in the early years of the period.

Vermont

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

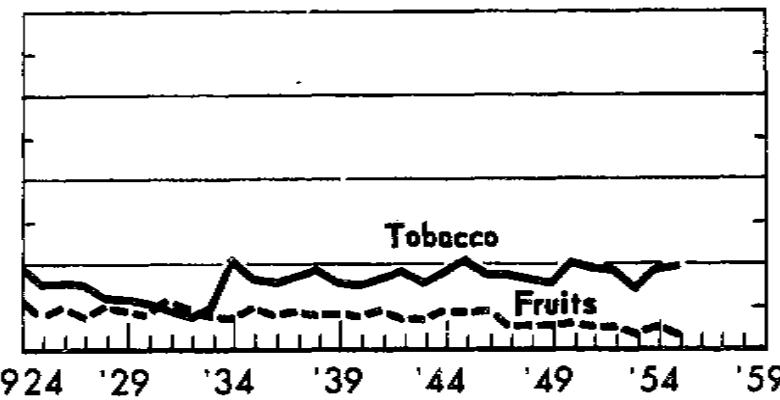

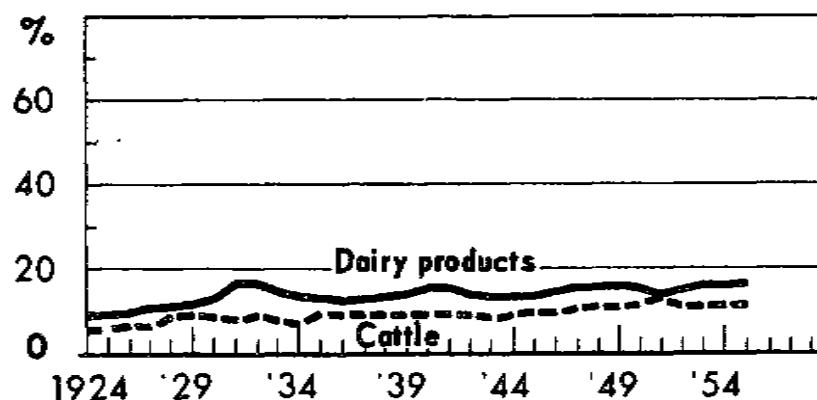

Dairy products have maintained a very important place in Vermont farm income over the entire 32-year period, running between 60 and 70 percent of total cash receipts in nearly every year. Eggs have been quite steady at 4-7 percent of the total, but maple products have declined somewhat in relative importance.

Virginia

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

Cash receipts from dairy products in Virginia have generally been from 10 to 15 percent of total cash receipts during the past 30 years. Cattle have gradually risen to nearly double their importance in the early years and now contribute about 10 percent of the total. Receipts from tobacco have accounted for between 15 and 20 percent of the total in most years. Fruits have declined gradually over the entire period to about one-third their earlier percentage. Receipts from broilers and turkeys have increased sharply.

Washington

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

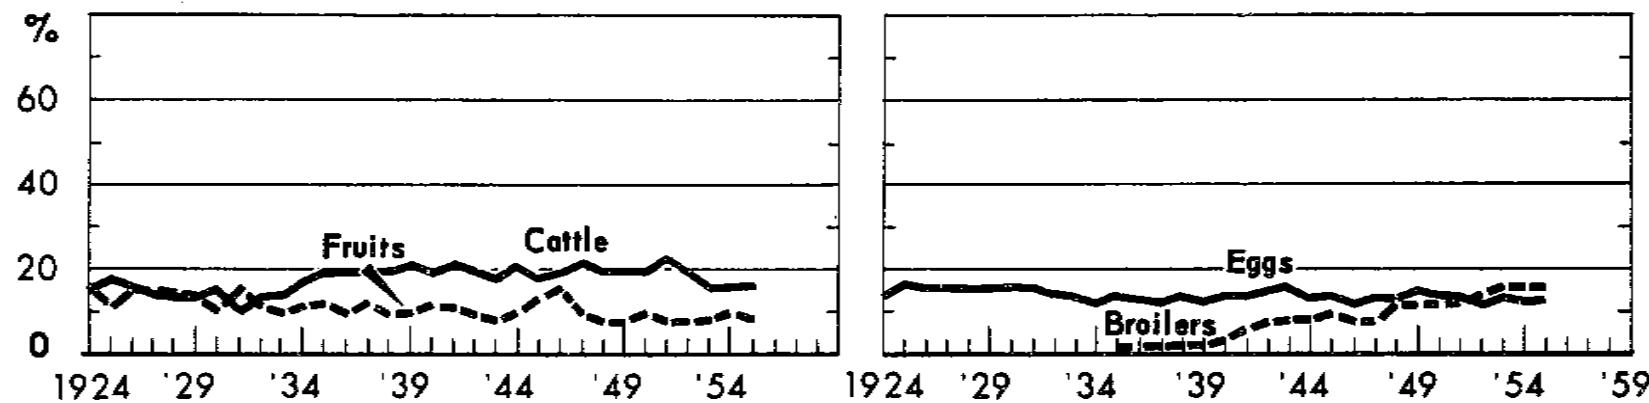

Cash receipts from wheat as a percentage of total cash receipts in Washington fluctuated between 15 and 20 percent for most years, but higher prices for wheat have brought somewhat higher percentages in recent years. Although receipts from fruits and nuts have generally been between 20 and 30 percent of total receipts, there is some indication of a slight downward trend.

West Virginia

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

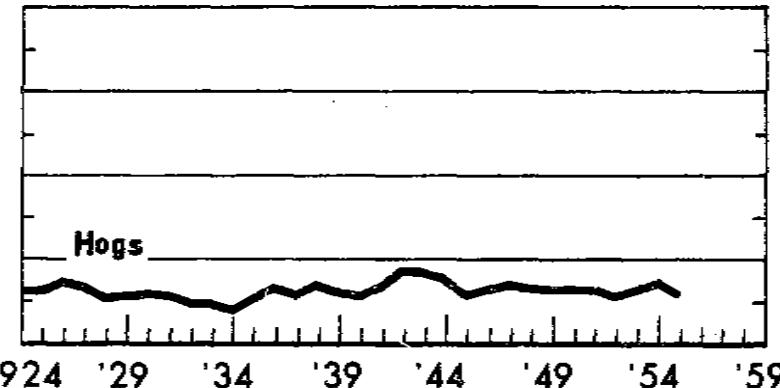

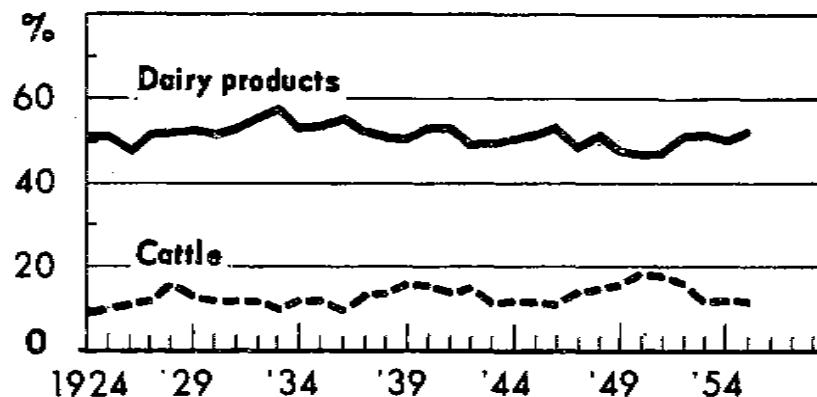

Cash receipts from cattle were between 10 and 15 percent of total cash receipts in the State for the years 1924-33. Since then they have been running from 15 to 20 percent of the total. Fruits dropped rather consistently from 16 percent in 1924 to 7 percent in 1955. Eggs have declined slightly. Broilers have risen sharply since 1935 and now contribute a larger share than eggs.

Wisconsin

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

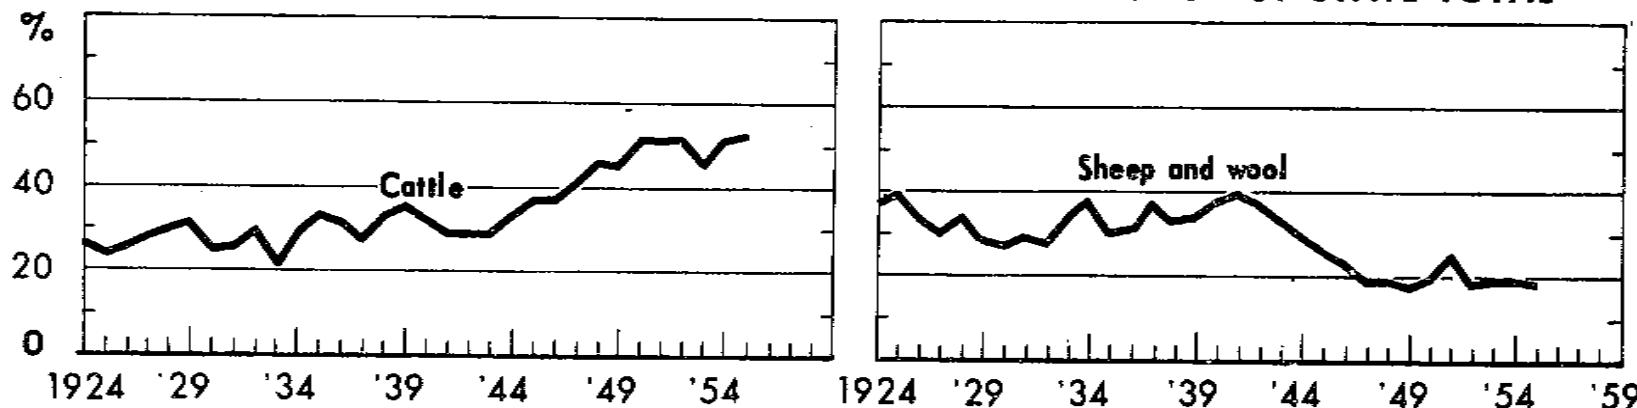

About half of total cash receipts in Wisconsin has consistently come from dairy products, with an increasing part from wholesale milk and decreasing shares from retail milk and butterfat. Now cash receipts from dairy products consist almost entirely of receipts from wholesale milk. The shares of total cash receipts contributed by cattle and hogs have been quite steady at 10-15 percent each for most years.

Wyoming

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

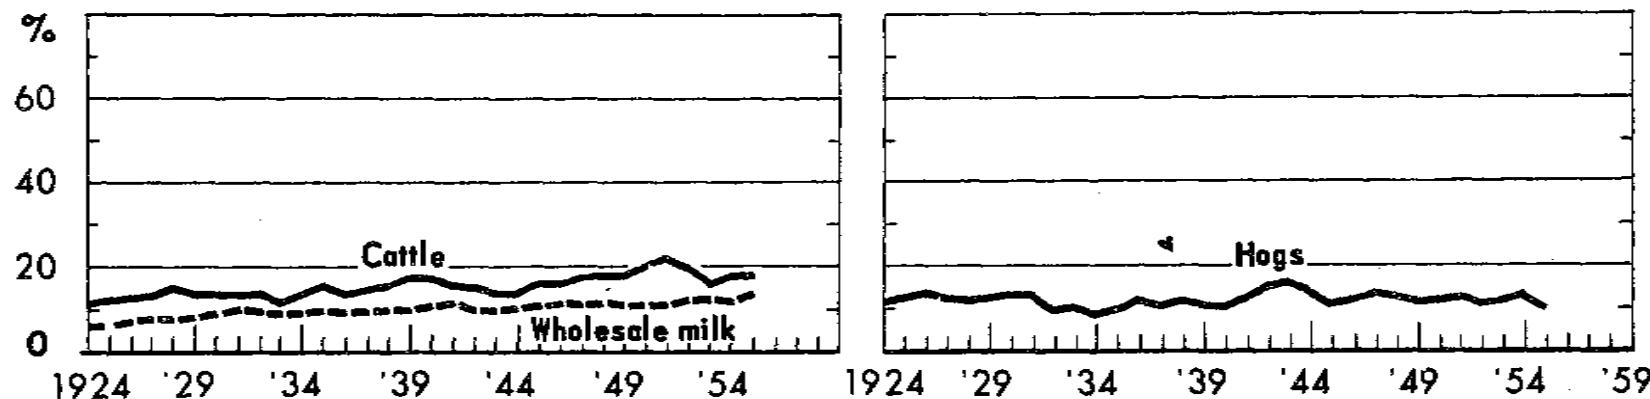

Cash receipts from cattle in Wyoming as a percentage of total cash receipts have shown a definite tendency to increase, especially since 1943. In the last few years they have accounted for about half the total. Receipts from sheep and wool were between 25 and 40 percent of total receipts for most years prior to 1941. Starting down in 1942, they reached 18 percent in 1949 where they have remained in most years since then.

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

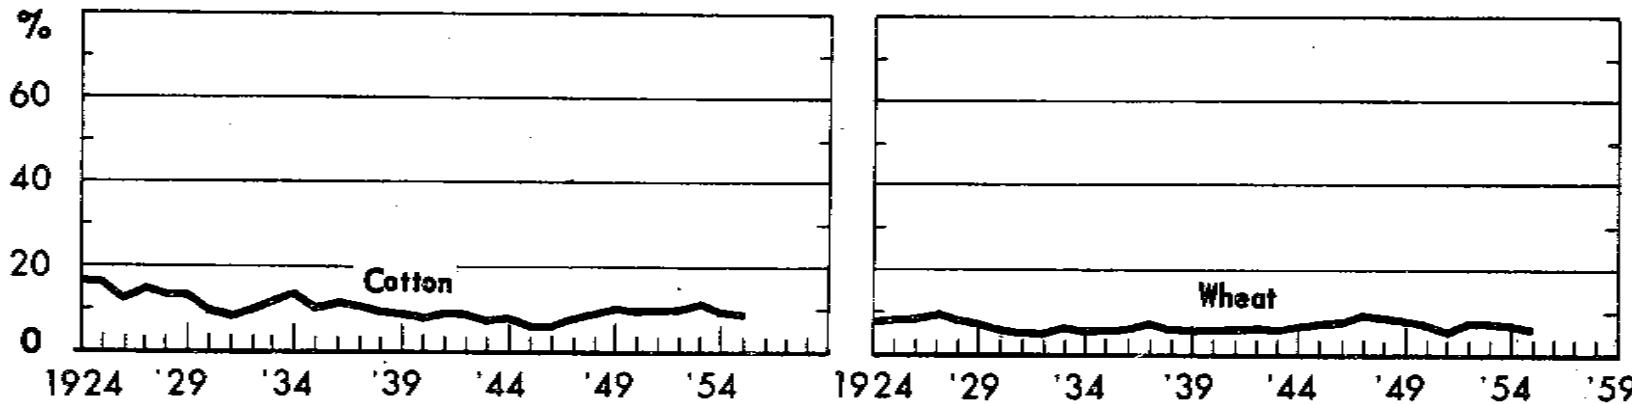

Cash receipts from marketings of cattle, wholesale milk, hogs, cotton, and wheat taken together have generally accounted for about 50 percent of the national total for all commodities. Cattle and wholesale milk have increased in relative importance. Cattle reached their present level of close to 20 percent in 1950. Wholesale milk rose from 6 percent in 1924 to 12 percent in 1955. Hogs generally run close to 10 percent. Eggs have been quite steady at or near 6 percent. Wool, chickens, retail milk, and butter-fat have declined, but turkeys and broilers have increased in relative importance.

CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

The contribution of the different crops to the national total of cash receipts also varied greatly at different times. Cotton declined gradually from 16 percent in 1924 to 6 percent in 1945, but recovered in 1949 to its present level of around 9 percent. Wheat fluctuated between 4 and 8 percent, with no specific trend. Other crops that were quite steady include corn, truck crops, dry edible beans, sugar beets, and sugar cane for syrup and sugar. Hay, oats, flaxseed, potatoes, sweet potatoes, and fruits all showed some tendency to decline, while barley, sorghum grain, tobacco, peanuts, rice, and soybeans increased in relative importance.

Year	Percentage of total cash receipts
