LIST OF TABLES

	<u>Page</u>
Average percentage yield of cuts from 200- to 220-pound U. S. Nos. 1, 2, and 3 barrows and gilts	5
Approximate percentage yield of cuts and products obtained from medium weight Good and Choice grade butcher hogs (percentage weights used to compute composite value 1905-44)	6
Livestock hogs, average prices at Chicago:	
Medium weight barrows and gilts	7
Light weight barrows and gilts	43
Sows	44
Major products, wholesale prices at Chicago:	
Ham, fresh	8
Ham, smoked	9
Ham, smoked, ready-to-eat	10
Bacon, smoked, sliced, 1-pound package	10
Bacon, smoked	11
Bellies, fresh	12
Loins, fresh (lcl)	13
Loins, fresh (carlot)	14
Shoulders, fresh	14
Picnics, fresh	15
Picnics, smoked	16
Lard, prime steam, tierces	17
Lard, 1-pound cartons	18
Minor products, wholesale prices at Chicago:	
Boston butts, fresh	19
Spareribs, fresh	20
Plates	21
Jowl butts, fresh	21
Neck bones, fresh	22
Pig tails, fresh	23
Pig feet, fresh	24
Regular trimmings, fresh	25
Pig snouts, fresh	26
Pig ears, fresh	27
Cheekmeat, fresh	28
Hearts, fresh	29
Livers, fresh	30
Pig tongues, fresh	31
Kidneys, fresh	32
Brains, fresh	33
White grease	34
Blood, unground	34
Composite values:	
Major pork products, fresh	35
Major pork products, fresh and cured	36
Minor pork products, fresh	37
"Byproducts," fresh	38
All hog products, fresh	39
All hog products, fresh and cured	40
Spread:	
Between wholesale value of all fresh hog products and market price of hogs	41
Between wholesale value of all fresh and cured hog products and market price of hogs	42

This report of prices of hogs and hog products at Chicago covers a period of more than a half-century. In 1937 the Bureau of Agricultural Economics of the U. S. Department of Agriculture issued a mimeographed preliminary report in which were presented basic price data for hogs and hog products back to 1905. In 1945 a mimeographed supplement was issued which included data from 1937 through 1944. This report has been prepared to expand and bring the information up to date in a convenient form for the many livestock producers, distributive agencies, consumers, and others to whom the compilations will provide a valuable and ready reference.

Hogs and hog products are very important in the agricultural economy of the United States. Hogs are produced on about one-half of the farms in this country and account for about one-tenth of the total cash receipts received by farmers from marketings of all farm products. Only beef cattle and dairy products account for a greater share of farmers' income. Hogs are slaughtered in about 2,400 establishments in the United States (excluding local butchers). The volume of pork production in 1956 was approximately 11 billion pounds. This amount is equal to about 66 pounds per person. Pork and pork products account for approximately eight percent of the American family's total expenditures for food.

Hog and Hog Product Prices

This report should be particularly useful as a reference source. The tables show month-by-month prices for hogs and the large number of hog products, as well as giving the computed composite value of hog products. Studies of these data will reveal trends in prices, relative amounts of change and seasonal variation in these prices, changes in seasonal variation over the years, and other related facts. In addition to the series of prices included in earlier publications, this report lists some additional series on hogs and hog products which may be of value.

The several price series included in this report relate to products accounting for approximately 71.9 percent of the live hog. They relate as closely as practicable to the weight of the products obtained from 200- to 220-pound hogs. In a few instances, however, price data were not available for the most appropriate weight of product or for a specific type of product; therefore, for those it was necessary to use quotations for other product weights or for a similar product.

1/ Prepared by the Program Analysis Group, Livestock Division,
Agricultural Marketing Service

The prices in the report generally are those quoted at the wholesale level; i.e., prices paid by retailers to wholesale distributors of meat. The tables are footnoted to show sources of information and to reveal changes in the product, weight, or description. The price data presented are based mainly on sales made at Chicago, Illinois, and were obtained largely from two sources: (1) The Livestock Market News Service of the Agricultural Marketing Service, and (2) the National Provisioner, a daily and weekly industry publication. It was necessary, for some of the earlier years, to use prices appearing in the annual reports of the Chicago and St. Louis Boards of Trade and the Chicago Daily Drovers Journal yearbooks.

The wholesale meat market reporting service of the Department was inaugurated in 1917, and the livestock market reporting service was started in 1918. The National Provisioner publications were the chief sources of all price information for hog products for the years prior to the establishment of the Federal reporting service.

Hogs and hog products, on which prices are quoted in this report, are fairly comparable for the entire period. In some instances, however, there were changes in the classifications, particularly as relating to live hogs and also to a lesser extent in classification of some hog products. However, careful attention was given to insure comparability insofar as practicable throughout the series.

Prices taken from trade sources in most instances represent a price range for a particular day - usually either Wednesday or Thursday. Prices from market reports of the Department also represent the price range, but usually apply to a week as a whole. Monthly averages were computed from these prices by averaging the mid-points of the daily or weekly prices for the number of weeks included in each month. Likewise, yearly averages are a simple average of the monthly average prices. Therefore, the average prices presented usually are averages of arithmetic means of daily or weekly ranges of price quotations. It should be kept in mind that numerous transactions occurred at prices both above and below these averages.

Yields of Hog Products

Hog products are ordinarily sold as individual products or cuts, rather than in carcass form. Straight comparisons between prices of hogs and prices of individual hog products are not appropriate because the live hog represents a composite of many different pork products in varying proportions, and there is a wide variation in the prices at which the different products are sold. Also, the total salable products obtained amount to less than three-fourths of the live weight. Therefore, the most satisfactory comparisons between prices of hogs and hog products can be made by computing the total market value of the products derived and comparing this computed value with hog prices.

The yields of the various products from 100 pounds live weight vary somewhat between individual hogs, depending upon the type and weight of hogs slaughtered. Also, over a period of time changes occur in production and in marketing methods. Therefore, results of studies compiled by the Livestock Division, Agricultural Marketing Service, on yields of pork products and weights of products, as they are now most commonly merchandised, were utilized in bringing together information for recent years. These percentage yields are shown in table 1 and are representative of the yields obtained from 200- to 220-pound (medium weight) hogs. Prior to 1945 the average yields presented in table 2 were used in computing product values. It is recognized that product yields vary slightly according to the season of the year. However, no adjustments were made for seasonal variation in yields because it is believed that such adjustments would not add materially to the accuracy of the composite value data.

For the period 1945 to date, a total of 71.9 pounds of pork products was used in computing the composite wholesale value of fresh hog products, and a total of 71.01 pounds of pork products was used in computing the composite wholesale value of the combination of fresh and cured hog products. Table 1 shows the average percentage yields of the various cuts which were used in computing the data for 1945 to date. There are a few other products derived from hogs in addition to those included in the report, but these are mainly inedible offal. Prices were not readily available for those products, and since their value is relatively small, they were omitted from the computations.

For the data prior to 1945, a total of 72.4 pounds of products was used to compute the composite wholesale value of fresh pork products (table 2). Also, before 1945 the following allowances were made in determining the yields of smoked meats to be used in computing the composite wholesale value of fresh and cured pork products: For cured hams and picnics, unsmoked, an increase of six percent from fresh weight to cured weight and a decrease of seven and one-half percent from cured weight to smoked weight; for bacon, an increase of two percent from fresh to dry-cured weight and a decrease of 11 percent from dry-cured weight to smoked weight. After allowing for these changes in weights, the total estimated product yield from 100 pounds live weight, on which prices were obtained, amounted to 70.9 pounds of fresh, cured, and smoked edible products and 0.4 pound of inedible white grease.

Composite Values

In grouping various hog products for the purpose of comparing product values with hog prices, consideration was given to the relative importance of the individual products. On this basis the various products were grouped into three classifications - "major" pork products, "minor" pork products, and other products referred to for convenience as "pork byproducts."

Composite values were computed for each group in the classification. The value of major pork products was also computed on both a fresh and a fresh and cured basis. In computing the composite value of fresh products, carlot prices were used insofar as possible. On the other hand, in computing the fresh and cured composite value, prices used were based on sales by slaughterers, packer branch houses, and wholesale dealers to retail dealers and hotel supply houses (usually less than carlot).

Included in the major fresh products were the following: skinned hams, picnics, bellies, loins, and lard (prime steam, tierces). In the major fresh and cured product group were included smoked, skinned hams, smoked picnics, bacon, fresh loins, and lard (one-pound cartons). The monthly composite values of these major product groups are shown in table 35 (fresh basis) and table 36 (fresh and cured basis).

In the price composites for all pork products (on both a fresh basis and fresh and cured basis), the minor pork products and "byproducts" on which prices were quoted were all fresh products. Butts, spare-ribs, and jowl butts were classified as "minor" products, while the following were classified as "byproducts": neckbones, tails, fore feet, lean trimmings, snout meat, ears, cheekmeat, hearts, livers, tongues, kidneys, brains, and white grease. The monthly composite values of the minor products are shown in table 37, and the composite values of the "byproducts" in table 38.

The monthly composite values of the three groups combined are shown in table 39 (fresh basis) and table 40 (fresh and cured basis).

Price Spreads

The computed spreads between hog prices (table 3) and the total composite values for all products are shown in tables 41 and 42. In computing these price spreads, adjustments were made for the period (November 1933 to January 1936) when the hog processing tax was in effect. This adjustment was made by deducting from the total price spread an amount equivalent to the tax rate. Adjustments were also made for the World War II period (June 1943 to January 1945) when Government subsidy payments were in effect.

Table 1.--Average percentage yield of cuts from 200- to 220-pound U. S. Nos. 1, 2, and 3 barrows and gilts ^{1/} (Percentage weights used to compute composite values, 1945 to date)

Fresh Basis		Fresh and Cured Basis	
Product	Percent of live weight	Product	Percent of live weight
Major		Major	
Hams, skinned, 12-14 lbs.	12.30	Hams, smoked, skinned, 12-14 lbs.	11.93
Picnics, 6-8 lbs.	6.40	Picnics, smoked, 6-8 lbs.	6.21
Bellies, 8-12 lbs.	10.89	Bacon, 8-12 lbs.	10.56
Loins, 8-12 lbs.	9.36	Loins, 8-12 lbs.	9.36
Lard	15.02	Lard	15.02
All major products	53.97	All major products	53.08
Minor		Minor	
Butts, 4-6 lbs.	5.06	Butts, 4-6 lbs.	5.06
Spareribs, 3 lbs. and down	1.57	Spareribs, 3 lbs. and down	1.57
Jowl butts (loose)	2.68	Jowl butts (loose)	2.68
All minor products	9.31	All minor products	9.31
Byproducts		Byproducts	
Neckbones	1.26	Neckbones	1.26
Tails	.17	Tails	.17
Fore feet	.83	Fore feet	.83
Lean trimmings	3.02	Lean trimmings	3.02
Snout meat	.30	Snout meat	.30
Ears	.16	Ears	.16
Cheekmeat	.45	Cheekmeat	.45
Heart	.29	Heart	.29
Liver	1.00	Liver	1.00
Tongue	.40	Tongue	.40
Kidneys	.25	Kidneys	.25
Brains	.09	Brains	.09
White Grease	.40	White grease	.40
All byproducts	8.62	All byproducts	8.62
All products	71.90	All products	71.01

^{1/} Percentage yields for major and minor products and neckbones, tails, fore feet, and lean trimmings are based on cutting tests compiled by the Livestock Division, Agricultural Marketing Service. Percentage yields for the remainder of the byproducts are based on a study, "Prices of Hogs and Hog Products, 1905-36," by Arthur T. Edinger, published by USDA, June 1937.

Table 2.--Approximate percentage yield of cuts and products obtained from medium weight Good and Choice grade butcher hogs 1/
(Percentage weights used to compute composite values, 1905-44)

Item	Percent of live weight	Item	Percent of live weight
Carcass - Head off, loaf and kidneys out	70.00	Lips	.09
Hams - fresh, regular	13.38	Cheek fat	.07
Bacon-fresh, briskets on, S.P.	12.50	Tongue fat	.03
Picnics - fresh	5.50	Head skins	.76
Loins - fresh	8.92	Lower jaw	.62
Butts, Boston - fresh	4.00	Upper jaw	1.08
Spare ribs - fresh	1.25	Bone dust	.24
Plates - fresh	2.50	Edible offal	5.36
Jowls - fresh	2.25	Liver	1.64
Lean trimmings, fresh	2.00	Stomach	.85
Feet, fore & hind	1.55	Heart	.29
Neck bones	.54	Gullett meat	.03

1/ For the 1905-44 period the following were used to compute the value of 55.3 pounds of major fresh pork carcass products derived from 100 pounds of live hog: Fresh hams, fresh picnic, fresh clear bellies, fresh loins, and prime steam lard. Percentage weight of each item used appears in Table 2. Since 1945, the following items and percentage weights have been used to compute the value of 53.97 pounds of major fresh pork carcass products derived from 100 pounds of live hog: Fresh skinned hams, 12 to 14 pounds, 12.30; fresh picnic, 5 to 8 pounds, 6.40; bellies, 8 to 12 pounds, 10.89; loins, 6 to 12 pounds, 9.30; and lard, prime steam tierces, 15.02. National Provisioner price (carload lots) used for loins.

1/ For the 1905-44 period the following were used to compute the value of 53.78 pounds of major fresh and cured pork carcass products derived from 100 pounds of live hog: Smoked ham, smoked picnic, smoked bacon D. O., fresh loins, and tierce or carton lard. Percentage weight of each item used appears in Table 2. Since 1945, the following items and percentage weights have been used to compute the value of 53.08 pounds of fresh and cured pork carcass products derived from 100 pounds of live hog: Smoked skinned ham, 12 to 14 pounds, 11.93; smoked picnic, 6 to 8 pounds, 6.21; bacon, 8 to 12 pounds, 10.56; fresh loins, 8 to 12 pounds, 9.36; and lard, 1 pound carton, 15.02. USDA Live-stock Market News prices (l.c.l.) used for loins.

1/ For the 1905-44 period the following were used to compute the value of 10.0 pounds of minor fresh and dry salted pork derived from 100 pounds of live hog: Fresh Boston butts, spare ribs, and dry salted plates and jowls. Percentage weight of each item used appears in Table 2. Since 1945, the following items and percentage weights have been used to compute the value of 9.31 pounds of minor fresh pork carcass products derived from 100 pounds of live hog: Butts, 4 to 6 pounds, 5.06; spare ribs, 3 pounds and down, 1.57; and jowl butts, 2.68.

1/ For the 1905-14 period the following were used to compute the value of 7.54 pounds of fresh hog by-products derived from 100 pounds of live hog: Neck bones, snouts, ears, tails, feet, lean trimmings, cheek meat, heart, liver, tongue, kidneys, brains, and white grease. Percentage weight of each item used appears in Table 2, except in the case of liver where the percentage was reduced to 1.00 percent because of condemnations. Since 1945, the following items and percentage weights have been used to compute the value of 8.62 pounds of fresh hog by-products derived from 100 pounds of live hog: Neck bones, 1.26; tails, .17; front feet, .83; lean trimmings, 3.02; snout meat, .30; ears, .16; cheek meat, .45; heart, .29; liver, 1.00; tongue, .40; kidneys, .25; brains, .09; and white grease, .40.
