16. Abstract (Limit: 200 words)

In the 2 years following the January 1980-April 1981 sales suspension, Soviet purchases of U.S. farm goods have remained more than one-third below 1979's record \$3 billion in agricultural sales. The worldwide economic recession reduced demand for U.S. agricultural exports during 1982, lowering agricultural export values by 15 percent from year-earlier levels. Sluggish foreign demand, low prices, higher U.S. dollar exchange rates, and heavy rains contributed to the continued decline in U.S. exports of farm products during April. The U.S. dollar continued to strengthen against other currencies during the first 6 months of 1983. Following the January announcement of the payment-in-kind (PIK) program, export prices have risen in tandem with domestic crop prices. U.S. agricultural export assistance through credit guarantee programs totaled nearly \$1.6 billion during 1982.

A Survey of Czechoslovakia's Agriculture

A Survey of Czechoslovakia's Agriculture, by Robert Cummings. May 1982.
FAER-171. 28 pp. Order PB82-193533 from NTIS.

Czechoslovakia is one of the most industrialized countries in Eastern Europe, and agriculture plays a minor role in the economy, contributing only 10.5 percent of national income in 1980. Of the arable land, 94 percent is held in socialized ownership, but private production supplies a large share of meat, livestock products, fruits, and vegetables. The emphasis of current agricultural policy is on attaining self-sufficiency in grain production to reduce costly imports. Furthermore, under the seventh Five Year Plan (1981-85), crop production will grow faster than livestock production, and cattle and sheep raising will be stressed rather than pig and poultry raising. Czechoslovakia is a net agricultural importer. The United States ranked as its 13th largest trading partner in 1980, providing most of the corn and a large portion of the oilseed and meal imports.

Copies of this report may be ordered from: National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161

Soviet Imports of U.S. Agricultural Products Since the 1980 Sales Suspension (see p. 2). In the 2 years following the January 1980-April 1981 sales suspension, Soviet purchases of U.S. farm goods have remained more than one-third below 1979's record \$3 billion in agricultural sales. Nevertheless, the USSR remains one of the most important markets for U.S. agricultural exports.

Export Markets Decline in 1982 (see p. 6). The worldwide economic recession reduced demand for U.S. agricultural exports during 1982, lowering agricultural export values by 15 percent from year-earlier levels. Japan led the list of major destinations, followed by the Netherlands, the USSR, West Germany, Canada, Spain, Korea, and Mexico. Among the leading export markets, only the USSR and Spain increased their imports of U.S. farm products.

U.S. Agricultural Export Values Down 16 Percent in First 7 Months of Fiscal Year 1983 (see p. 23). Sluggish foreign demand, low prices, higher U.S. dollar exchange rates, and heavy rains contributed to the continued decline in U.S. exports of farm products during April. Agricultural shipments in April amounted to a below-average \$3 billion, and shipments for the 7-month period totaled \$21.1 billion, compared with \$25.2 billion in the same months last year.

Dollar Continues Strong in World Currency Markets (see p. 61). The U.S. dollar continued to strengthen against other currencies during the first 6 months of 1983. High interest rates, a strong stock market runup, and European currency realignments contributed to the dollar's relative strength.

Agricultural Commodity Export Prices Up in January-April 1983 (see p. 63). Following the January announcement of the payment-in-kind (PIK) program, export prices have risen in tandem with domestic crop prices. The PIK program has substantially reduced 1983 planted acreages of wheat, corn, rice, sorghum, and cotton.

Commercial Agricultural Exports Assisted by CCC Credit Decline in 1982 (see p. 69). U.S. agricultural export assistance through credit guarantee programs totaled nearly \$1.6 billion during 1982. Wheat, corn, cotton, and soybeans were the principal commodities assisted, going primarily to Korea, Portugal, Brazil, and Mexico. A new blended export credit enhancement program will raise CCC activity sharply in 1983.

Soviet Imports of U.S. Agricultural Products Since the 1980 Sales Suspension

Soviet purchases of U.S. farm products have not recovered to the record levels reached in 1979. Moreover, the Soviet pattern of trade with the United States and the rest of the world, which was altered to offset the loss of commodities denied during the suspension, has not returned to what it was prior to the suspension. The United States now supplies a smaller share of the substantially larger Soviet import market. Nonetheless, 1982 trade data show that the Soviet Union again ranked as one of the most important U.S. markets, as Soviet imports of U.S. agricultural goods were the second highest on record.

Table 1--USSR agricultural imports, 1975-82 ^{1/}

Grain Sales Peak in 1979

In 1979, the Soviet Union was the second largest market for U.S. agricultural exports. The major share of the Soviet grain and soybean markets was held by the United States. The United States supplied about 70 percent of Soviet wheat and coarse grain imports. Thirteen of 14 million tons of imported corn and 5 of 10 million tons of imported wheat came from the United States. U.S. grain sales to the USSR totaled about \$2.4 billion, representing almost one-fifth of total U.S. wheat and coarse grain exports. In addition, the United States supplied virtually all of the Soviet Union's 1.8 million tons of imported soybeans, valued at one-half billion dollars. Together, Soviet grain and oilseed purchases from the United States reached about \$2.9 billion.

Grain Sales Not
Terminated Under
the Sales
Suspension

The U.S. sales suspension, announced in January 1980, selectively targeted U.S. commodities needed by the Soviet Union for the maintenance and buildup of livestock herds and thus included exports of U.S. wheat, coarse grains, soybeans, and animal feeds. However, the United States still permitted the USSR to purchase wheat and corn under the terms of the U.S.-USSR Grain Agreement, which allowed the Soviet Union to annually take up to 8 million tons of U.S. grain between October 1 and September 30. The embargoed commodities often accounted for more than 90 percent of Soviet agricultural purchases from the United States. As a result, the value of U.S. agricultural exports fell to \$1.1 billion, causing the USSR to plummet to 11th position among U.S. agricultural markets. The USSR took 6 million tons of U.S. grain, accounting for about 20 percent of all USSR wheat and coarse grain imports but representing just 6 percent of total U.S. wheat and coarse grain exports.

USSR Resumes Place
Among Top U.S.
Markets in
1981-82

The U.S. sales suspension extended through 1980 and into the second quarter of 1981. Nonetheless, Soviet purchases of U.S. agricultural commodities recovered somewhat in 1981, permitting the Soviet Union to move up to eighth position among major U.S. markets. About one-quarter of the Soviet wheat and coarse grain imports came from the United States. The Soviet Union imported 4.1 million tons of wheat, valued at \$773 million, and 5.4 million tons of corn, valued at \$781 million, accounting for about 9 percent of all U.S. wheat and coarse grain exports. The USSR re-entered U.S. markets for soybeans in October 1981; however, most of the soybeans were not delivered until after December and thus were reflected in 1982 data.

In 1982, the first full calendar year free of sales restrictions, the Soviet Union climbed to third place among world purchasers of U.S. farm goods, behind Japan and the Netherlands. The United States supplied about 30 percent of all Soviet wheat and coarse grain imports. The 4.3 million tons of U.S. wheat, valued at \$802 million, and 7 million tons of U.S. corn, valued at \$819 million, imported by the USSR represented about 12 percent of total U.S. wheat and coarse grain exports. The USSR obtained almost two-fifths of their imported soybeans from the United States. However, the USSR has not resumed buying U.S. soybean meal since 1979. In 1981 and 1982, the USSR imported a total of 2.7 million tons of soybean meal from U.S. competitors.

USSR Pattern of
Trade Remains
Altered

The changed Soviet trade pattern partly caused the failure of Soviet agricultural purchases from the United States to approach and exceed 1979's record levels. During the U.S. suspension, the Soviet Union obtained its grain and soybeans from other sources and negotiated long-term agreements to ensure the reliability of these sources. The Soviet Union contracted to purchase 4 million tons of grain and 0.5 million tons of soybeans from Argentina annually during 1981-85 and 25 million tons of grain from Canada, taking 4 million tons the first year with half-million-ton increases in each subsequent year. Brazil is to provide the USSR with 0.5 million tons of

soybeans and 0.4 million tons of soybean meal annually in 1982-86.

Other Factors
Likely Restrained
Soviet Purchases

In 1982, the United States took a number of steps indicating its intent to remain a reliable supplier of agricultural products. In October 1982, the United States offered to guarantee delivery of U.S. grain purchased by the Soviet Union, and in January 1983, the President signed the Futures Trading Act, containing a contract sanctity amendment. The President announced that the United States was ready to renegotiate the U.S.-USSR Grain Agreement on April 22, 1983.

Soviet grain imports from the United States could have been larger in recent years; however, the absolute value of Soviet agricultural imports probably could not have been much higher. Since the Soviets are estimated to have imported successive record levels of agricultural products in 1981 and 1982, the USSR's limited hard currency reserves probably prevented these purchases from increasing further. The USSR's ability to accumulate hard currency reserves and pay for imports lessened as world prices for petroleum and gold fell. In addition, the worldwide recession and limited trade sanctions imposed by European countries in response to Soviet interference in Poland dampened demand for nonenergy Soviet exports. 1/

It is impossible to determine the extent to which the U.S. and USSR foreign policy affected post-sales suspension trade; however, once the suspension was lifted, the USSR returned to U.S. markets to purchase agricultural commodities in such quantities as to again rank among the top U.S. export markets. The Soviet Union is expected to remain a major purchaser of U.S. farm goods in the foreseeable future. (Tom Bickerton, Eastern Europe and USSR Branch)

1/ The European Economic Community imposed limited trade sanctions against the import of Soviet luxury goods in 1981 and 1982.

1/ EXCLUDES TRANSSHIPMENTS THROUGH CANADA AND WESTERN EUROPE ESTIMATED AT \$64 MILLION IN 1981 AND \$70.6 MILLION IN 1982.

Export Markets Decline in 1982

The worldwide economic recession caused a dropoff in demand for U.S. agricultural exports during 1982. Total shipments of farm products fell 15 percent from their \$43.3 billion peak in 1981 to \$36.6 billion. Agricultural exports to Japan dropped by \$1 billion to \$5.6 billion with the slowdown in feed grain and oilseed shipments, although Japan maintained its position as the leading destination. Japan is the largest foreign market for U.S. feed grains, oilseeds, cotton, tobacco, and livestock products.

Shipments to Mexico Drop

A more than \$1-billion drop in shipments to Mexico was another significant factor in the agricultural export decline. Mexico plunged to ninth position among leading markets during 1982 from second place in 1981. Sharply reduced movements of wheat, feed grains, soybeans, and fruits and vegetables contributed to the decline. Improved Mexican crop production in 1981 was primarily responsible for the smaller export total.

Agricultural exports to China and Korea also dropped from 1981 levels as crop harvests in those countries recovered. Cotton and wheat shipments to China declined in 1982, and rice and tobacco sales to Korea were down drastically from year-earlier levels.

The 1982 declines were offset somewhat by improvements in exports of wheat, corn, soybeans, sunflowerseed oil, poultry meat, and tobacco to the USSR, which moved up to third position among the top destinations. In addition, shipments of a wide range of farm products to Spain boosted that country to the sixth largest market.

Developed countries took 54 percent of U.S. agricultural exports in 1982, compared with 51 percent during 1981. The less developed countries' share declined to 35 percent from 37 percent because Asian, African, and Latin American countries imported far less than in 1981. Centrally planned economies as a group took about the same share, while the USSR imported more. China and the Eastern European countries took substantially less.

Table 5 ranks export markets based on 1982 values, with previous-year comparisons. Export quantities are shown in table 7 in the same sequence. More detailed data are available from U.S. Foreign Agricultural Trade Statistical Report, Calendar Year 1982. (Thomas A. Warden, World Analysis Branch)

U.S. Agricultural Export Values Down 16 Percent in First 7 Months of Fiscal Year 1983

Agricultural Export Value Down

U.S. shipments of farm products abroad during April continued to lag behind the 1981/82 performance with less than 3 billion dollars' worth shipped, compared with 3.5 billion dollars' worth in April 1982. Cumulative U.S. agricultural exports from October 1982 through April 1983 totaled \$21.1 billion, 16 percent below the \$25.2 billion in the same months last year. Lower prices were responsible for part of the decline, although volume was also down sharply for wheat, coarse grains, cotton, and rice. Export volume in the 7-month period dropped 9 percent from its year-earlier level to 91 million tons.

Foreign Demand Conditions Continue Sluggish

Economic recovery in most countries has been sluggish, and in 1982/83, import demand for U.S. farm products declined further from last year's low levels. Foreign livestock feeding rates have fallen in recent months, affecting U.S. exports of feed grains and oilseeds. Foreign purchases of U.S. cotton remained at low levels, especially in east Asian countries, as China's crop recovered and textile markets continued depressed. Relatively high exchange rates for the U.S. dollar also have inhibited expansion in commodity exports.

Agricultural exports to Eastern Europe, the USSR, and China are down sharply, in some cases averaging only half the 1981/82 value. Developing countries in Latin America, Africa, and west Asia took less, partly because of scarce foreign exchange availability. Shipments of wheat to south Asia and north Africa increased; however, lower exports to the USSR, China, Brazil, Nigeria, and other areas more than offset these gains.

Exports of farm products to Western Europe--especially feed grains and soybeans--are sharply below those of the previous year because of improved harvests last fall and depressed currency exchange rates in many European countries.

Heavy Rains Hamper Export Movements

In addition to the decline in foreign demand, heavy rains and flooding in the Mississippi Valley hampered U.S. grain export movements during March and April. (Thomas A. Warden, World Analysis Branch)

1/ PRELIMINARY

Dollar Continues Strong in World Currency Markets

The U.S. dollar continued to strengthen against other major currencies important to U.S. agricultural trade during the first 6 months of 1983. The foundation for the U.S. dollar's impressive showing continues to be high interest rates payable on dollar-denominated assets. Other favorable factors included the bull market in U.S. stocks, elections in Europe, and the realignment of currencies in the European Monetary System (EMS).

Higher relative interest rates are in general a greater inducement to holding one currency over another. Interest rates in the United States, after adjustments for inflation, have remained above comparable rates of return in Europe and Japan. As a result, currency traders choose the dollar when they want to hold deposits for speculative or future purchases.

Bullish U.S. Stock Market Strengthens Dollar

The U.S. stock market also proved a strong temptation for foreign investors. The sustained, 8-month run of the bulls on Wall Street, accompanied by ever-present signs of recovery in the U.S. economy, convinced many that the United States was the place to invest. This belief was especially evident when contrasted with sluggish economic growth in Western Europe and Japan.

The elections in France and West Germany in February and March caused some confusion but little disorder in currency markets. The mixed results in the local elections in France increased the uncertainty regarding the value of the franc, while the impressive return of the Christian Democrats in West Germany underscored faith in the mark. The dollar, however, improved sharply when the subsequent realignment of currencies in the European Monetary System (Common Market minus Great Britain and Greece) undermined positions taken by traders based on the election result: the French franc, according to many, simply was not devalued enough. On the other hand, the German mark was not allowed to rise. Traders holding marks were caught short, and the dollar surged in late March and early April.

Signs are now appearing that may reverse the U.S. dollar's upward path in the near future. First, recent declines in short-term interest rates have sent speculators temporarily seeking other currency holdings, mostly to the benefit of the British pound. Second, the apparent plateau on Wall Street has sent potential investors to other prospects such as the Tokyo exchange. Last, the continued pressure on the French franc induced currency traders to purchase marks, also helped by recent signs of an upturn in the West German economy. Unless the recoveries in Western Europe and Japan appear more robust, however, there will be very little pressure that could force a significant devaluation of the U.S. dollar. (David Stallings, World Analysis Branch)

^{1/}Preliminary.

Agricultural Commodity Export Prices Up in January-April 1983

USDA launched a payment-in-kind (PIK) program for several commodities to reduce stocks and bolster farm prices, following two consecutive record grain harvests, reduced foreign demand, and a buildup in domestic stocks. Domestic crop prices, including those for soybeans, which are not under the PIK program, rose 5 to 20 percent in the 4 months since the January announcement.

Low Farm Prices Spur USDA Initiative

The PIK program was established against the backdrop of a serious problem of farm surpluses. U.S. ending stocks of grains and soybeans in 1982/83 are expected to be nearly 3 billion bushels above a normal stocks-to-use ratio, despite programs already in place to reduce production--acreage reduction and paid land diversion programs--and a 3-year blended export credit program.

The burdensome stocks caused sharply lower commodity prices. Farm prices for wheat and corn reached 4-year lows in the fall. Prices for these commodities will average below target prices in 1982/83, depressing farm income and increasing Government outlays beyond budgetary expectations. Other crop prices were also down; soybeans hit a 6-1/2-year low, and rice and cotton were at nearly 4-year lows.

PIK To Lower Stocks, Increase Prices

PIK will take record acreage out of production in 1983--about a fifth for wheat and sorghum, over a fourth for cotton and corn, and a third for rice. Associated with the forecast production declines are significant drops in 1983/84 ending stocks--nearly two-thirds for rice and a third for cotton and corn. No change in stocks is expected for wheat. Soybeans, although not eligible for the PIK program, will lose acreage because they are doubled-cropped with wheat and because prospects for corn, a competing crop, are brighter. Soybean production is expected to fall by 9 percent, and stocks by about 20 percent.

Prices have responded favorably since the PIK announcement in January in anticipation of tighter supplies in 1983/84. Average monthly domestic prices for corn increased 20 percent during December-April; for cotton, 12 percent; and for wheat, soybeans, and rice, about 5 percent each.

The estimates of U.S. stocks of wheat, corn, and soybeans in the April 21 USDA stocks report were below expectations, even though they were well above year-earlier levels. Prices for these crops rose 10 to 20 cents per bushel in the following week. Lower corn stocks imply higher feed and industrial use than previously estimated. Stocks might not be adequate to meet use during the summer, and if this is the case, the \$3.15 per bushel trigger price would be reached, releasing reserve stocks into the market.

Farm prices for wheat, corn, rice, and soybeans are expected to rise in 1983/84 and could approach or exceed 1981/82 levels. Average prices are anticipated to increase, but there is concern that prices at harvesttime will fall more than the normal seasonal adjustment as PIK commodities become eligible to enter the market.

Export and Import
Prices Increase

Wheat prices at gulf ports rose to \$175 per metric ton in May, matching year-earlier levels for the first time this season. Canadian and Australian export prices for wheat also hovered around \$175. Argentine export prices have been discounted about \$25 per ton from world price levels to assist the movement of this year's exceedingly large wheat crop. U.S. export prices for corn and soybeans also rose and are reflected in increased Rotterdam import prices.

Weak demand and prospects for another large sugar crop in 1982/83 are keeping world sugar prices at about 8 cents per pound in 1983. On the other hand, U.S. import prices rose to over 21 cents per pound in January. The price included a duty of 2.81 cents per pound and exceeded the 20.73-cents-per-pound market stabilization price (MSP) for the first time since it became effective in October. Since January, prices have remained above the MSP. Import prices for coffee and cocoa beans are also up from recent monthly averages, but are still below those of a year earlier. Rubber prices in March were significantly stronger than those of a year earlier. (Bradley Karmen, World Analysis Branch)

Commercial Agricultural Exports Assisted by CCC Credit Decline in 1982

The value of U.S. agricultural exports assisted through Commodity Credit Corporation (CCC) programs totaled nearly \$1.6 billion in 1982, a decline of 10 percent compared with 1981 and an increase of 25 percent over 1980's value.

Principal commodity exports assisted by CCC programs in 1982 were wheat (\$635 million), corn (\$226 million), cotton (\$220 million), soybeans (\$132 million), grain sorghum (\$106 million), sunflowerseeds (\$83 million), and soybean oil (\$79 million).

The Export Credit Guarantee Program (GSM-102) replaced the Noncommercial Risk Assurance Program (GSM-101) in 1981. The GSM-102 program is intended to help exporters meet the competition from other countries and increase commercial exports of U.S. agricultural commodities on credit terms for up to 3 years.

GSM-102 Exports Go to 15 Countries

GSM-102 exports went to 15 countries in 1982 compared with 19 in 1981. Korea received \$413 million in GSM-102 assistance, followed by Portugal, Brazil, Mexico, Peru, and Morocco.

CCC authorized \$65 million in export credit guarantees to Mexico in August 1982. Another \$1 billion was added in October, which will result in a sharp increase in GSM-102 assisted exports to Mexico in calendar year 1983.

A new 3-year CCC Blended Export Credit Enhancement program, amounting to \$1.5 billion, was announced in October 1982. The blend will consist of \$100 million in interest-free credits annually under the GSM-5 program and \$400 million of credit guarantees under the GSM-102 program. (Fannye G. Lockley, World Analysis Branch)

Agriculture in China...

"U.S. business executives rivet their attention to stock market activity, prices, and interest rates, while their Chinese counterparts look for annual production and procurement plans, control targets, and administrative orders..." (Francis C. Tuan and Frederick W. Crook, authors of the new report, **Planning and Statistical Systems in China's Agriculture**, \$5.50, 100 pages, FAER-181.)

Planning is at the heart of the Chinese agricultural system. This Economic Research Service report is a comprehensive description of how the Chinese have gathered their farm data and used it to plan production in recent years.

This new report on China is excellent background on a budding agricultural market for U.S. goods. Because of high domestic demand, China is an important purchaser of grain, oilseeds, and fibers—major U.S. export commodities.

To order **Planning and Statistical Systems in China's Agriculture** (FAER-181) GPO stock No. 001-000-04329-3 ...

Write to Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Make your check or money order for \$5.50 payable to SupDocs. You can charge your order on VISA, MasterCard, or with a GPO deposit account; call GPO's order desk at (202) 783-3238. Bulk discounts available.

The symbol says "agriculture" ... the report explains China's agricultural planning and statistics system ... the country means more exports for U.S. agriculture.
