SOYBEANS, COWPEAS, AND VELVETBEANS

By States, 1924-53

Acreage, Yield, Production, Price, and Value

Presented in this report are estimates of acreage, production, and value of soybeans, cowpeas, and velvetbeans for the United States and each State where estimated. These estimates begin with the first year such data are available.

Soybeans and cowpeas: Tables are presented showing the acreage grown alone, acreage interplanted, total equivalent solid acres, and the utilization of total acres for beans or peas, hay, and other purposes for each State and for the United States for 1924-53. Tables also show the acreage harvested for beans or peas, yield per harvested acre, production, season average price received by farmers, and the value of production for each State and for the United States. Prices by States are the estimated mid-month prices received by farmers weighted by estimated percentages sold in each month of the crop marketing season. United States prices are obtained by weighting State prices by quantities produced.

Velvetbeans: Tables are presented showing the acreage harvested for beans, yield per harvested acre, production, season average price received by farmers, and the value of production for each State for which production is estimated and for the United States.

Earlier years: Estimates for 1949-54, except price and value, are contained in Statistical Bulletin No. 185, "Field Crops - Acreage, Yield, and Production by States, 1949-54, Revised Estimates", issued in June 1956. Acreage, yield, and production estimates since 1954 are presented in the Annual Summary of Crop Production published in December of each year.
