HAY

Acreage, Yield, Production, Price, and Value By States, 1866-1953

This report presents estimates of acreage, yield, and production of hay by kinds and by States from the earliest years covered in official Department estimates through 1953. Later years are subject to revision at this time. This record shows how the different hay crops were classified or grouped throughout this long period. Estimates of season average price and value of production are available for all hay only.

The span of time covered by the estimates for the different kinds of hay varies as continuing attempts have been made to provide more serviceable descriptions of the hay crop. Beginning in 1866 estimates were prepared for all tame hay only. In 1909 the series on wild hay was started and added to the estimates of all tame hay to provide an estimate of all hay. Separation of the all tame hay estimate began in 1919 with the preparation of estimates for alfalfa, clover and timothy alone or mixed, grain, annual legume, and other hay. A further breakdown of the all tame hay estimate was inaugurated in 1924 with separation of the estimate for annual legume hay into soybean, cow-pea, and peanut hay and the addition of estimates for lespedeza and sweetclover hay. The series on sweetclover hay was dropped in 1944 and that acreage again was included in the "other hay" group.

Changed seeding practices involving legume and grass mixtures also have produced important and relatively recent changes in the reporting of hay crops by kind. Beginning in 1949 estimates for alfalfa hay include alfalfa, and alfalfa mixtures, and estimates for clover and timothy hay include clover, timothy, and mixtures of clover and grasses. Estimates for grain hay include oats cut ripe and fed unthreshed; before 1949 such a use was considered as oats for grain.

The kinds of hay included in the other hay estimate have varied considerably as a result of the foregoing and other changes in the estimating program. "Other" hay includes such forage crops as millet, Sudan, sweetclover (before 1924 and after 1943), Johnson, Bermuda, brome, redtop, crested wheat, and other miscellaneous grasses and legumes. Also, for certain States in some years, "other" hay includes small acreages of the hay crops separately estimated in most States; for example, the discontinuance in 1939 of separate estimates for the small acreages of wild hay in 26 Atlantic and East Central States resulted in a changed composition of the "other" hay estimate.

For 1954 data see Statistical Bulletins No. 185 "Field Crops by States, 1949-54" and No. 208 "Field and Seed Crops by States, 1949-54." For later years see December annual summaries of "Crop Production" and "Crop Values."

1/ Beginning in 1949 estimates include alfalfa and alfalfa mixtures. 2/ Beginning in 1949 estimates include clover, timothy, and mixtures of clover and grasses. 3/ Beginning in 1949 estimates include oats cut ripe and fed unthreshed. 4/ Includes such forage crops as millet, Sudan, sweetclover (before 1924 and after 1943), Johnson, Bermuda, brome, reedtop, crested wheat and other miscellaneous tame grasses and legumes. Also, for certain States in some years, "other" hay includes small production of the hay crops separately estimated in most States.
