COMMERCIAL LIVESTOCK SLAUGHTER

Number and Live Weight, by States
Meat and Lard Production, United States, by Months, 1944-57

This report brings together the estimates of the number of head of livestock slaughtered in commercial plants by States and by months for 1944-57, and estimates of total live weight and average live weight for each species by States and by months for 1947-57. Also included in this report are the estimates of meat production by months and species for the United States for 1944-57. Commercial slaughter includes slaughter in Federally inspected plants and other commercial plants, but excludes farm slaughter. Estimates of commercial slaughter from 1946 to 1957 have been published monthly in the "Livestock Slaughter by States" report and also in a yearly publication with the same title. Supplies of the earlier publications have been exhausted. Estimates for 1944 and 1945 have not been previously published.

The estimates of livestock slaughter and meat and lard production in commercial plants represent a combination of enumerated and estimated data. The Meat Inspection Division of the Agricultural Research Service of the Department of Agriculture, in connection with its regulatory functions relating to meat inspection, compiles a report on the number of animals slaughtered and the number of pounds of lard rendered under Federal inspection each month. The average live weight and average dressed weight are based on a voluntary mailed inquiry sent to the plants under Federal inspection. Estimates of Federally inspected slaughter are prepared from these indications by the Market News Branch, Livestock Division of AMS.

The non-federally inspected livestock slaughter estimates are prepared monthly based on returns from mailed inquiries to slaughter plants which do not operate under Federal inspection. These plants supply information on a voluntary basis on the number of animals slaughtered, total live weight, and lard production. In some States, the voluntary reports are supplemented, in part or wholly, by records of slaughter in plants under State or local regulations. During 1944 and part of 1945, the data on slaughter in non-federally inspected plants were obtained under the slaughter control programs which required slaughterers to make complete reports on number of head, live weight, and dressed weight. Mandatory reports for plants of a certain size were also required in 1951 and 1952 under the slaughter control program.

The estimates of non-federally inspected slaughter are combined with similar estimates for Federally inspected slaughter to obtain the totals for all commercial slaughter by States and for the United States.
