16. Abstract (Limit: 200 words) Higher commodity prices, especially for coarse grains and oilseeds, raised total U.S. agricultural exports to \$24.1 billion during the first 7 months of fiscal year 1984, 13 percent over those of the same period in 1983. Winter freeze damage and the U.S. economic recovery helped push agricultural imports up to \$11 billion in fiscal year 1984, \$1.5 billion over 1983 values. The U.S. dollar rebounded on international currency markets in late March and into April from its early 1984 downward trend. U.S. farm product exports totaled \$34.8 billion during fiscal year 1983, down 11 percent from the 1982 value. Eastern Europe's financial problems continued to depress imports of agricultural commodities during 1983.

Digest

U.S. Agricultural Exports Up 13 Percent (see p. 2). Higher commodity prices, especially for coarse grains and oilseeds, raised total U.S. agricultural exports to \$24.1 billion during the first 7 months of fiscal year 1984, 13 percent over those of the same period in 1983. Export volume declined slightly to 89 million tons. Coarse grain exports increased 2.4 million tons, but wheat and soybean shipments were lower.

U.S. Agricultural Imports Rise With Consumer Demand (see p. 47). Winter freeze damage and the U.S. economic recovery helped push agricultural imports up to \$11 billion in fiscal year 1984, \$1.5 billion over 1983 values. Commodity increases included coffee, sugar, tobacco, fruits and vegetables, vegetable oils, and rubber.

Dollar Strengthens in March and April (see p. 87). The U.S. dollar rebounded on international currency markets in late March and into April from its early 1984 downward trend. Strong U.S. economic growth and relatively high real returns on dollar-denominated investments provided much of the impetus behind the U.S. currency advances against European currencies.

U.S. Agricultural Export Contributions by State, Fiscal Year 1983 (see p. 91). U.S. farm product exports totaled \$34.8 billion during fiscal year 1983, down 11 percent from the 1982 value. Estimates of export contributions by State included Illinois (\$2.9 billion), Iowa (\$2.8 billion), California (\$2.5 billion), Kansas and Minnesota (\$1.8 billion each), Nebraska (\$1.7 billion), Texas (\$1.6 billion), Indiana (\$1.5 billion), and North Dakota (\$1.3 billion).

U.S. Farm Exports to Eastern Europe Rose Slightly in 1983 (see p. 107). Eastern Europe's financial problems continued to depress imports of agricultural commodities during 1983. U.S. farm product exports to the area totaled just under \$900 million, only 3 percent above those of 1982. Exports to the region in fiscal year 1984 could exceed the 1983 figure.

U.S. Agricultural Exports Up 13 Percent

U.S. agricultural exports during the first 7 months of fiscal year 1984 (October 1983-April 1984) totaled \$24.1 billion, 13 percent above those in the same months in 1983. This increase resulted primarily from higher commodity prices, especially for coarse grains and oilseed products. Total export volume declined slightly to 89 million tons.

The export forecast for fiscal year 1984 has been raised to \$38.5 billion because of larger than expected coarse grain and oilseed shipments in March and April. Coarse grain exports may exceed 56 million tons, and soybeans may exceed 21 million tons. Commodity prices have remained stronger than earlier anticipated, although wheat export prices are showing signs of weakness. Extremely wet weather has delayed U.S. spring crop plantings and raised grain prices.

Coarse grain shipments during the first 7 months amounted to 35.9 million tons, 2.4 million tons ahead of those in fiscal year 1983. Value jumped 42 percent as average export prices escalated sharply to nearly \$150 per ton after last summer's drought. Exports to the USSR, South Africa, Japan, Turkey, and Israel well exceeded last year's levels.

Soybean product exports were down sharply, however. Soybean shipments of 14.1 million tons were 15 percent behind those of 1983, but higher prices raised the value 10 percent to \$4.2 billion. While shipments increased to Mexico, the USSR, Korea, and Romania, most countries took substantially less, including the large soybean markets in Japan and Western Europe where livestock feeding rates declined. Reduced soybean meal shipments to the European Community lowered total export volume about 18 percent during the first 7 months. Although soybean oil exports to India and Pakistan were well ahead of last year's levels, high prices and foreign exchange shortages reduced import demand in Latin America, Eastern Europe, and Africa. Sunflower oil exports, in contrast, grew sharply, including shipments to Egypt and Venezuela.

Wheat exports showed signs of weakness in April, stemming from competition with foreign supplies from Canada, Australia, and France. Volume slipped 3 percent to 21.6 million tons during October-April, despite increased shipments to the USSR, China, and Latin America. Sharply lower exports to India and Egypt more than offset gains.

Cotton exports were another bright spot in an otherwise sluggish foreign demand situation. Shipments were 47 percent ahead of last year's pace with strong demand from Western Europe, the USSR, and most Asian countries. (Thomas A. Warden, World Analysis Branch)

U.S. Agricultural Imports Rise With Consumer Demand

The following factors influenced increases in U.S. agricultural imports in the first 7 months of fiscal year 1984 (October 1983-April 1984): (1) last summer's drought, (2) winter freezes in Florida and Texas, (3) the U.S. economic recovery, (4) the moderate rise in prices, and (5) a strong dollar on international markets. U.S. imports of agricultural commodities during April continued ahead of those of 1983, reaching \$1.8 billion compared with \$1.5 billion in April 1983. Total U.S. farm imports for fiscal year 1984 reached \$11 billion, up \$1.5 billion from those of last year. Imports were led by higher values for coffee, sugar, tobacco, fruits, vegetables, vegetable oil, rubber, bananas, tree nuts, spices, feeds, malt beverages, and wine, offsetting reduced inflows for cocoa beans, beef, and cheese.

Noncompetitive Import Values Up

Noncompetitive product imports of \$3.8 billion were 15 percent higher in fiscal year 1984 than those in 1983. Coffee values, which totaled \$1.9 billion, gained 9 percent from the previous year. However, coffee unit import prices rose 8 percent to \$1.30 per pound. Crop damage in Brazil boosted coffee prices. Average monthly wholesale prices for Brazilian coffee in U.S. markets increased from \$1.42 per pound in October 1983 to \$1.48 in April 1984. Brazil and Colombia provided 20 percent and 10 percent, respectively, of U.S. coffee imports, with Mexico, Indonesia, El Salvador, Guatemala, the Ivory Coast, Ecuador, and Uganda as the other major suppliers.

U.S. imports of cocoa and products amounted to \$552 million, down 3 percent from those of a year ago. The volume dropped 25 percent to 250,000 tons. The New York futures price for cocoa beans averaged 91 cents per pound in October 1983, increased to \$1.15 per pound in January 1984, and declined to an average of \$1.13 per pound in April because late cocoa crop returns were higher than first estimated in January. The Ivory Coast provided 24 percent of the cocoa volume, followed by Brazil and the Dominican Republic.

The strong dollar and U.S. economic recovery boosted rubber import values to \$520 million in fiscal year 1984, up 61 percent from 1983. The volume increased 25 percent to 493,000 tons because low stock levels were replenished. Demand will likely continue to rise in 1984 due to reduced stocks. Therefore, rubber prices can be expected to remain high. Indonesia supplied nearly 60 percent of U.S. rubber imports, while Malaysia, Thailand, Singapore, and Liberia shipped nearly all of the remainder.

Values also increased for bananas, spices, tea, and essential oils. Cumulative banana imports totaled \$410 million compared with \$343 million imported for the comparable period last year. Nearly all of the bananas were from Latin America.

Competitive Import Values Up

Values for competitive imports, accounting for 65 percent of all U.S. farm imports, expanded 16 percent during the first 7 months of fiscal year 1984 to \$7.2 billion. Values for some competitive farm products, including sugar, vegetable oil, fruits, vegetables, tobacco, tree nuts, feeds, fresh cut flowers, malt beverages, and wine, increased more than enough to offset declines for cheese and

beef. Imports of beef and veal, accounting for 63 percent of all meat imports, declined 10 percent in value to \$679 million. Import volume dropped 13 percent to 319,000 tons because of larger U.S. red meat supplies. Beef output is expected to continue growing in the first half of 1984 but may taper off in the second half because of smaller cattle marketings. Australia supplied nearly 43 percent of all beef and veal imports, with Canada and New Zealand as the other principal suppliers.

Sugar imports for the first 7 months in fiscal year 1984 totaled \$767 million, up \$224 million from the 1983 level. Increased values stemmed from larger quota exemptions and strong re-exports. The sugar import quota for fiscal year 1984 has been set at 3.1 million tons, up 183,000 tons from the 1983 quota. The 7-month import volume rose 34 percent to 1.9 million tons. Sugar import prices recovered in this period, averaging \$400 per ton compared with \$379 in 1983. The wholesale price for sugar in the U.S. market was 22 cents per pound in April 1984, unchanged from October 1983. U.S. sugar consumption in 1984 is expected to fall to 8.6 million short tons (dry basis) compared with 8.9 million in 1983. Import demand for other sweeteners was up sharply the first half of fiscal year 1984 and is expected to continue upward the second half. Principal sugar suppliers were the Dominican Republic, Brazil, the Philippines, Australia, and Argentina.

The value of imported vegetable oils grew 80 percent in 1984 to \$395 million. The gain resulted chiefly from increases in the value of coconut oil, which accounts for over 50 percent of all vegetable oils imported into the United States. Palm oil imports rose 33 percent in volume and import unit prices increased 35 percent. Reduced U.S. output of soybeans and peanuts and higher domestic oil prices probably will result in larger vegetable oil imports in 1984. The Philippines supplied the bulk of the coconut oil, while Malaysia provided about 90 percent of the palm oil.

Responding to lower domestic supplies, U.S. imports of unmanufactured tobacco increased 4 percent in volume to 113,000 tons, valued at \$336 million. U.S. tobacco imports accounted for about one-third of the leaf used in cigarette output in 1983, and a similarly high proportion is expected in 1984. Turkey, Brazil, Guatemala, Canada, South Korea, and Mexico were the major foreign suppliers.

Imports of beverages continued an upward trend in fiscal year 1984, with wines and beer 7 and 14 percent, respectively, ahead of last year's levels. Vegetable imports expanded 22 percent to \$859 million because winter freezes damaged U.S. vegetable crops. Canned tomato and mushroom imports gained sharply. Imports of fresh winter vegetables from Mexico were also up sharply, especially since the peso weakened substantially against the dollar and freezes damaged U.S. winter crops.

Values declined for cheese imports but rose for other competitive imports, such as wool, eggs, and tree nuts. (Charles E. Goode, World Analysis Branch)

Dollar Strengthens in March and April

The U.S. dollar rebounded from its lows in early March, appreciating strongly against all five major currencies most important to U.S. agricultural trade. Strong economic growth in the United States and high real rates of return on dollar investments provided most of the fuel for the U.S. currency's advance.

Rise in Interest Rates Leads Dollar Surge

Interest rates on dollar-denominated financial instruments rose steadily in March and April, increasing the advantage of such assets over those issued in other major currencies. Higher rates of return make the U.S. dollar more attractive for speculative as well as investment purposes. For example, at the end of April, interest rates on 6-month Euromark deposits fell to 6 percent below those available for Eurodollars, after having only a 3.5-percent disadvantage in late February. Such a differential in favor of the dollar clearly caused a major move out of the mark, along with other European currencies, into the U.S. dollar.

The relatively high interest rates payable on the U.S. dollar were enhanced by the sustained moderation of inflation (measured by major price indexes) in the United States. Inflation-adjusted rates of return on investments in the United States were the highest of any in the developed world.

U.S. Economic Growth Boosts Dollar

The economic recovery in the United States has been maintained at a pace exceeding most expectations. Strong economic growth encourages investment and provides convincing evidence that current dollar assets will continue to produce high returns. Consequently, news of increased housing starts, industrial production, and factory orders serve notice that the United States is the place for income growth. When contrasted with the languid European economies and given limited access to opportunities in yen, the dollar becomes the logical instrument for producing real returns as well as safety.

Labor Unrest Undermines Mark

Threats of a major strike by metalworkers in West Germany led many to believe that sluggish economic growth there will continue. In addition, the lackluster stock markets and low interest rates discouraged investment in that country. As a result, the February-March rush into marks from dollars became a tide in the opposite direction.

The German mark is the major currency in the European Monetary System (EMS), whose numbers include all of the European Community except Great Britain and Greece. All of these monies are tied to each other. Thus, when the dollar appreciates against the mark, it also appreciates against the other European currencies. Since mid-March, the dollar has risen over 6 percent against all of the EMS currencies.

Yen Retains Value

Of the world's major currencies, only the Japanese yen remains above its 1983 average value relative to the U.S. dollar. The robust Japanese economy, combined with the promise of eased restrictions on capital inflows to Japan, has served to create an interest in holding more yen. In addition, the yen promises to be more widely used as a reserve currency (as an alternative to the dollar), further enhancing its current appeal. (David Stallings, World Analysis Branch)

U.S. Agricultural Export Contributions by State, Fiscal Year 1983

Introduction

USDA's Economic Research Service (ERS) publishes estimates of U.S. agricultural export contributions by State on a fiscal-year basis. These estimates are prepared by major commodity group, based on the assumption that, for each commodity, a State contributes the same export share as its share of production or marketings. For example, if Florida provides 90 percent of all oranges used for processing in the United States, it contributes approximately 90 percent of all orange juice exports. However, where obvious distortions exist, this procedure is amended accordingly. These amendments will be discussed more fully in another section.

The figures presented here are estimates, have normal probability distributions, and are subject to error. Due to the homogeneity of most farm products, it is virtually impossible to distinguish exports of one State from another. Statistics on the State origin of agricultural exports are not available.

Sources

The following sources were used for this report: (1) the annual summaries of production, disposition, and income by commodity, Statistical Reporting Service (SRS), USDA; (2) Crop Production, 1983 summary, SRS, USDA; (3) Grain Stocks (showing quarterly stock levels of the major grains) SRS, USDA; (4) export inspections by class of wheat, Federal Grain Inspection Service, USDA; (5) domestic feed-use computations, National Economics Division, ERS, USDA; (6) U.S. exports by customs districts, Bureau of the Census, U.S. Department of Commerce (USDC); and (7) 1978 Agricultural Census, Bureau of the Census, USDC. In addition, a 1981 study on the interregional grain and oilseed movements (based on 1977 data), prepared by Lowell Hill and others, University of Illinois, Champaign-Urbana, was consulted.

To keep the data manageable, we made decisions on apportioning exports, such as limiting exports only to States that account for 90 percent of a given commodity's output. We also assumed that a State would export only if it had an apparent surplus. Although this method could eliminate some export States, it's more likely that large exporters would be sufficiently credited. In certain cases, such as wheat and feed grains, modifications of these general principles were adopted.

Wheat

Wheat is another example of revised exports by State. The tremendous increase in soft red winter wheat production in a number of Southeastern States (Alabama, Arkansas, Georgia, Kentucky, Louisiana, Mississippi, South Carolina, and Tennessee) followed very closely the crop's expanded export sales, particularly to China, in the early eighties. We attempt to incorporate such information into the estimation process through the use of export inspections by grade and by port area of shipment.

Table 12--Soft red winter wheat production and exports

Marketing years	Production		U.S. exports
	Southeast	United States	
	1/		
	<u>Million bushels</u>		
1978-79	35	189	95
1979-80	51	317	154
1980-81	108	435	299
1981-82	254	676	460
1982-83	286	613	325
1983-84 forecast	184	511	210

1/ Virtually all production in this region is in soft red winter wheat.

Feed Grains

Feed grain exports (corn, grain sorghum, barley, and oats) by State have been revised in this issue because of their predominance among U.S. exports. In fiscal year 1981, feed grains accounted for 25 percent of the value of U.S. agricultural exports, falling to 21 percent in 1983. These figures would nearly double if they were examined solely in terms of volume.

After several methods were tested, including the use of coefficients found in the Illinois study and a surplus-deficit method, 1/ export percentages used during fiscal years 1980-82 were selected, adjusted for stock changes and the maintenance of animal numbers. This method was selected because grain handling and exporting patterns have changed significantly since 1977.

States frequently gear their production and marketing of various commodities specifically for export. This was the case in the midseventies, with Midwestern corn moving by unit trains from inland elevators to Seattle and Portland, and from there to the Far East. Special rail and elevator facilities were constructed to handle the 55 to 125-car trains. The savings resulted from lower unit costs in transportation and reduced travel time compared with that of shipping through Gulf ports. These shipments grew from 156,000 metric tons in 1976 to 9.3 million metric tons in 1981, before falling off during the last 2 years. The surplus-deficit method was not used exclusively because evidence indicates that some feed grain deficit States are significant exporters of certain coarse grains, such as Texas which exports grain sorghum.

U.S. farm product exports totaled \$34.8 billion during fiscal year 1983, down 11 percent from the \$39.1 billion shipped in 1982. Values declined for pork, edible offals, poultry products, butter, fats and oils, hides, wheat, rice, feed grains, processed fruits, tree nuts, vegetables, oilseeds and products, and cotton.

1/ The surplus-deficit method involves computing the number of grain-consuming animal units per State, based on inventory numbers, and calculating the amount of grain needed to sustain those numbers.

State contributions to agricultural exports in fiscal year 1983 included Illinois, with an estimated \$2.9 billion, followed closely by Iowa with \$2.8 billion (table 13). California, Kansas, Minnesota, Nebraska, Texas, Indiana, North Dakota, and North Carolina also shipped significant amounts of agricultural products abroad.

Illinois and Iowa were again the largest soybean and feed grain exporting States. California was the main source of fruits, vegetables, tree nuts, and cotton, and the second largest source of rice. Kansas was the primary wheat export State. (Steve Milmo, World Analysis Branch)

--- = Not applicable.

U.S. Farm Exports to Eastern Europe Rose Slightly in 1983

Eastern Europe's trade and financial problems continued to depress U.S. farm sales in 1983. Exports were valued at \$899 million, 3 percent higher than in 1982 but only 50 percent of 1981's peak (table 15). Agricultural exports accounted for 60 percent of all U.S. exports to the region last year, similar to 1982's share but below the historic average. Low U.S. agricultural exports to Eastern Europe and higher total imports reduced the U.S. trade surplus to \$128.2 million, down 69 percent from 1982 and the lowest since 1972. The agricultural trade surplus, however, of \$634 million was little changed from 1982. Exports were up to Hungary, Poland, and Yugoslavia but down substantially to Bulgaria, Czechoslovakia, and the German Democratic Republic.

Severe import restrictions and aggressive export expansion policies, foreign debt repayments, good crop production in 1982 and 1983, and reduced livestock numbers curbed U.S. sales. The region likely posted the equivalent of a \$4.5-billion trade surplus last year, much improved from 1980's record deficit of \$13.3 billion (table 16). Most of the improvement came from lower imports; 1983's imports, in current prices, were 10 percent less than in 1980 (40 and 29 percent lower, respectively, for Poland and Romania).

The region's hard currency trade balance also probably improved, but net hard currency debt increased slightly to approximately \$72.8 billion. Little new lending occurred in 1983, and the addition of unpaid interest onto the existing debt of Poland and Yugoslavia accounted for almost all of the regional increase. All countries except Poland and Yugoslavia likely reduced their net debt last year.

Grain Exports Decline; Oilseed Shipments Improve

In 1983, the United States exported 1.6 million tons of grain (valued at \$222 million) to Eastern Europe, down 53 percent from 1982 and 78 percent from 1981 (table 17). Corn exports fell to 1.1 million tons (\$139.5 million), down from 3.2 million in 1982. Wheat exports increased to 385,000 tons (\$61 million) from 340,000 in 1982.

Soybean exports increased to 721,000 tons (\$180 million) in 1983, up from 571,000 in 1982. Exports increased to Poland, Romania, and Yugoslavia. Soybean meal and cake exports also rose to 755,000 tons (\$174.7 million) compared with 524,000 in 1982. Exports decreased to Bulgaria, Czechoslovakia, the German Democratic Republic, and Romania but improved significantly to Yugoslavia, Poland, and especially Hungary, which imported no U.S. soybean meal and cake in 1982. Vegetable oil exports rose significantly over those of 1982. Exports of 143,000 tons (\$63 million) were up 500 percent from 1982. Exports to Poland, a major importer, remained on the 1982 level, but exports to Yugoslavia increased to 132,000 tons.

U.S. agricultural imports from Eastern Europe increased in 1983 to \$264 million, up from \$228 million in 1982. The value of processed meat imports, primarily canned hams, increased 16 percent and accounted for 60 percent of farm imports. The increase was largest from Poland. Other imports increased from Bulgaria, Hungary, Poland, and Romania.

CCC Credits and Food Aid

The Commodity Credit Corporation (CCC) credit authorization for fiscal year 1983 equaled \$277 million--\$235 million for Yugoslavia and \$42 million for Hungary. CCC credit guarantees were key factors in the level of last year's farm exports because they supported about one-third of all U.S. agricultural shipments to Eastern Europe.

Poland, traditionally the largest CCC credit recipient in Eastern Europe, is not being considered for credit under the Export Commodity Program. However, Poland continued to receive food aid from the United States under Title II of Public Law (P.L.) 480 and donations under Section 416. Food aid, amounting to \$28.4 million under P.L. 480 and \$5.9 million (market value) under Section 416, was exported to Poland in fiscal year 1983, and the 1984 authorization amounts to \$22.4 million under P.L. 480 and \$61.3 million under Section 416. This food aid is distributed in Poland by four private voluntary organizations: CARE, Catholic Relief Service, Food for Poland, and World Vision.

Total Farm Imports Continue Low

The performance of last year's U.S. farm exports to Eastern Europe likely illustrated the region's total farm imports. Data for 1983 trade are incomplete, but farm imports in 1982 fell 19 percent to their lowest level since 1978. Because of the drop, 1982's agricultural trade deficit fell to the equivalent of \$1.8 billion from \$4.1 billion in 1981.

Poland, the region's major importer, continued to cut agricultural imports in 1983. The value of all farm imports (excluding cotton and fish meal) fell 25 percent, while exports rose 27 percent, leaving the country with an agricultural trade deficit of approximately \$240 million, the lowest in over a decade. Higher than expected exports of meat and livestock products, frozen fruits and vegetables, and sugar, and much lower than planned feed imports were responsible; purchases of oil meal, fish meal, and chemical feed additives were 26-59 percent less than planned.

U.S. Export Prospects Dim; Improvement Possible in Overall Trade Situation

U.S. agricultural exports to Eastern Europe should change little this year. Export estimates are made on a fiscal-year basis, and the estimate for fiscal year 1984 is \$890 million (exports in 1983 were \$827 million). The final value of shipments will depend to a great extent, as usual, on the level of 1984 CCC credit authorizations for the region. These authorizations are currently \$233.5 million--\$43.5 million for Hungary and \$190 million for Yugoslavia. Lower demand, intensified competition from other suppliers, and Eastern Europe's hard currency shortage will prevent the United States for several years from achieving farm exports to the region that approach 1976-81's \$1.6-billion annual average.

Despite the poor outlook for U.S. farm sales, the worst of Eastern Europe's immediate foreign trade and finance problems should be over. Except in Poland and Yugoslavia, debt reschedulings and current maturity schedules have given the region a few years' breathing space. Official policies to maintain trade surpluses at almost any expense will continue, thus providing funds for debt service. However, excessive concern with the trade balance could well weaken the region's export potential by deferring needed capital imports. This, combined with the maturity of rescheduled payments later in the decade, could place several countries in a debt crisis similar to that of just 2-3 years ago. (Cynthia Taylor and Robert Cummings, Eastern Europe and USSR Branch)

Total	1,577.4	1,781.0	876.6	899.0

--- = Amount less than 1,000 tons, \$1 million, or not applicable.

1/ Including estimated transshipments through Belgium, Canada, the Federal Republic of Germany, and the Netherlands. 2/ 1,000 pieces.

Sources: Bureau of the Census, U.S. Department of Commerce, Foreign Agricultural Trade of the United States, Economic Research Service, USDA; U.S. Export Sales, Foreign Agricultural Service, USDA.

More aggressive U.S. marketing and a re-direction of trade programs already in place would help to close the gap with the European Community in the world market for high-value agricultural products (HVP's).

The potential payoff in closing that gap is impressive: If by 1990 the U.S. expanded its HVP exports by half again as much as the present level, it would gain an additional \$50 billion in GNP and an additional 1 million U.S. jobs.

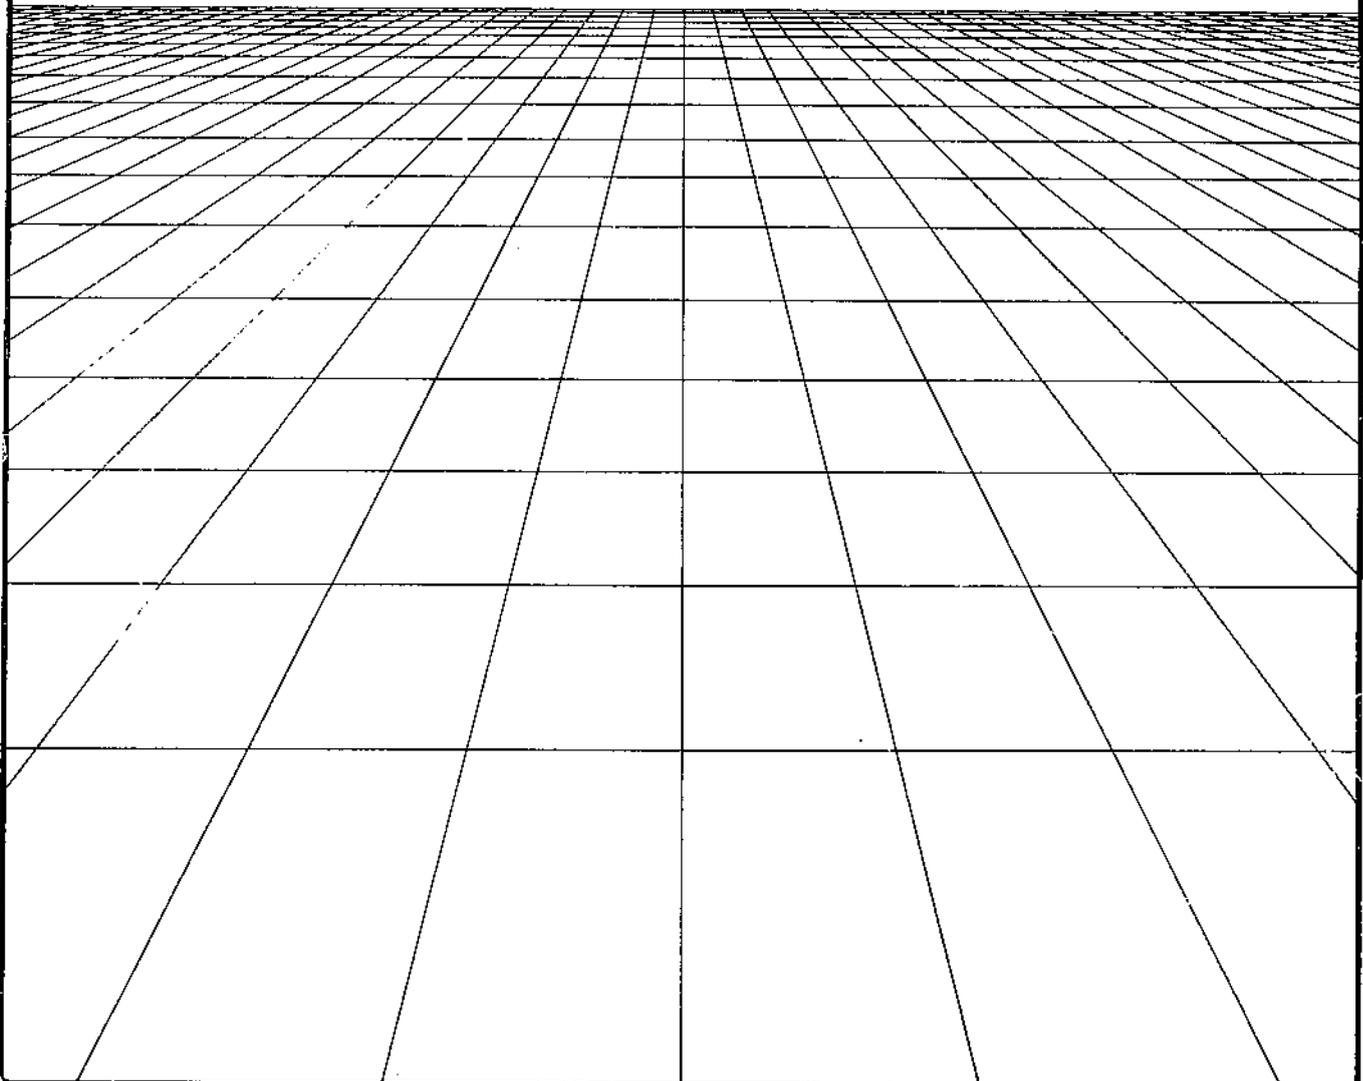

The U.S. share of world trade in HVP's, chiefly processed and semiprocessed food products, stagnated at about 10 percent from 1970-80, while the EC share, with its exports growing by 20 percent per year in that decade, stood at five times the U.S. level.

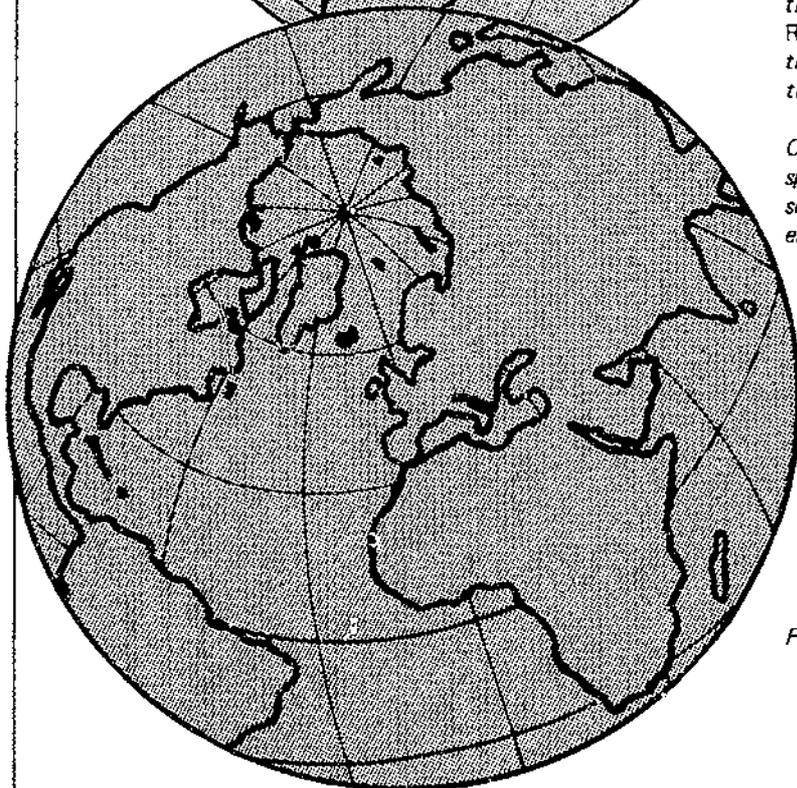

For more information on the growing market in HVP exports and the not always friendly U.S.-EC competition, be sure to get "High-Value Agricultural Exports: U.S. Opportunities in the 1980's." See box for ordering information.

HOW TO ORDER

For your copy of "High-Value Agricultural Exports: U.S. Opportunities in the 1980's" (GPO no. 001-000-04371-4), send \$4.50 in check or money order to Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Make check or money order payable to Superintendent of Documents. Be sure to include the GPO number in your order. For faster service, call GPO's order desk at (202) 783-3238 and charge your purchase to your VISA, MasterCard, or GPO deposit account. Foreign addresses, add additional 25 percent.

Closing the U.S. Ag Export Gap

A CLOSER LOOK AT THE WORLD

Slow economic growth, tightening export markets, and aggressive trade practices make detailed information on world agriculture a must. World Agriculture Regional Supplements are ready with the information, wrapping up regional agricultural production, trade, and policy.

Comprehensive tables and thought-provoking special articles are also included. Issued yearly, the series has been expanded to 11 reports, 32 pages each. Reports may be ordered individually or as a set.

- North America & Oceania
- East Asia
- Middle East & North Africa
- USSR
- Eastern Europe
- Southeast Asia
- Western Europe
- Latin America
- China
- South Asia
- Sub-Saharan Africa
