Cotton Quality Statistics, United States

1957-58

Introduction

This report contains information on the quality of cotton ginned during the 1957-58 season, and on the quality of cotton on hand in the United States on August 1, 1958. To facilitate comparison certain data contained in the reports for previous years are included. This information should be helpful to cotton growers and breeders and to merchants, consumers, research workers and others interested in the quality of the crop and the carry-over.

Estimates of the quality of the ginnings for most of the States are based on the classification of samples representing approximately 10 percent of the crop of upland cotton. The proportions of the various qualities found in the samples classed were applied to total ginnings as reported by the Bureau of the Census for upland and American-Egyptian cotton. For the purpose of preparing the estimates most cotton-producing States are divided into districts. Samples classed were weighted by ginning periods for all cotton-producing States as well as by districts for most cotton-producing States.

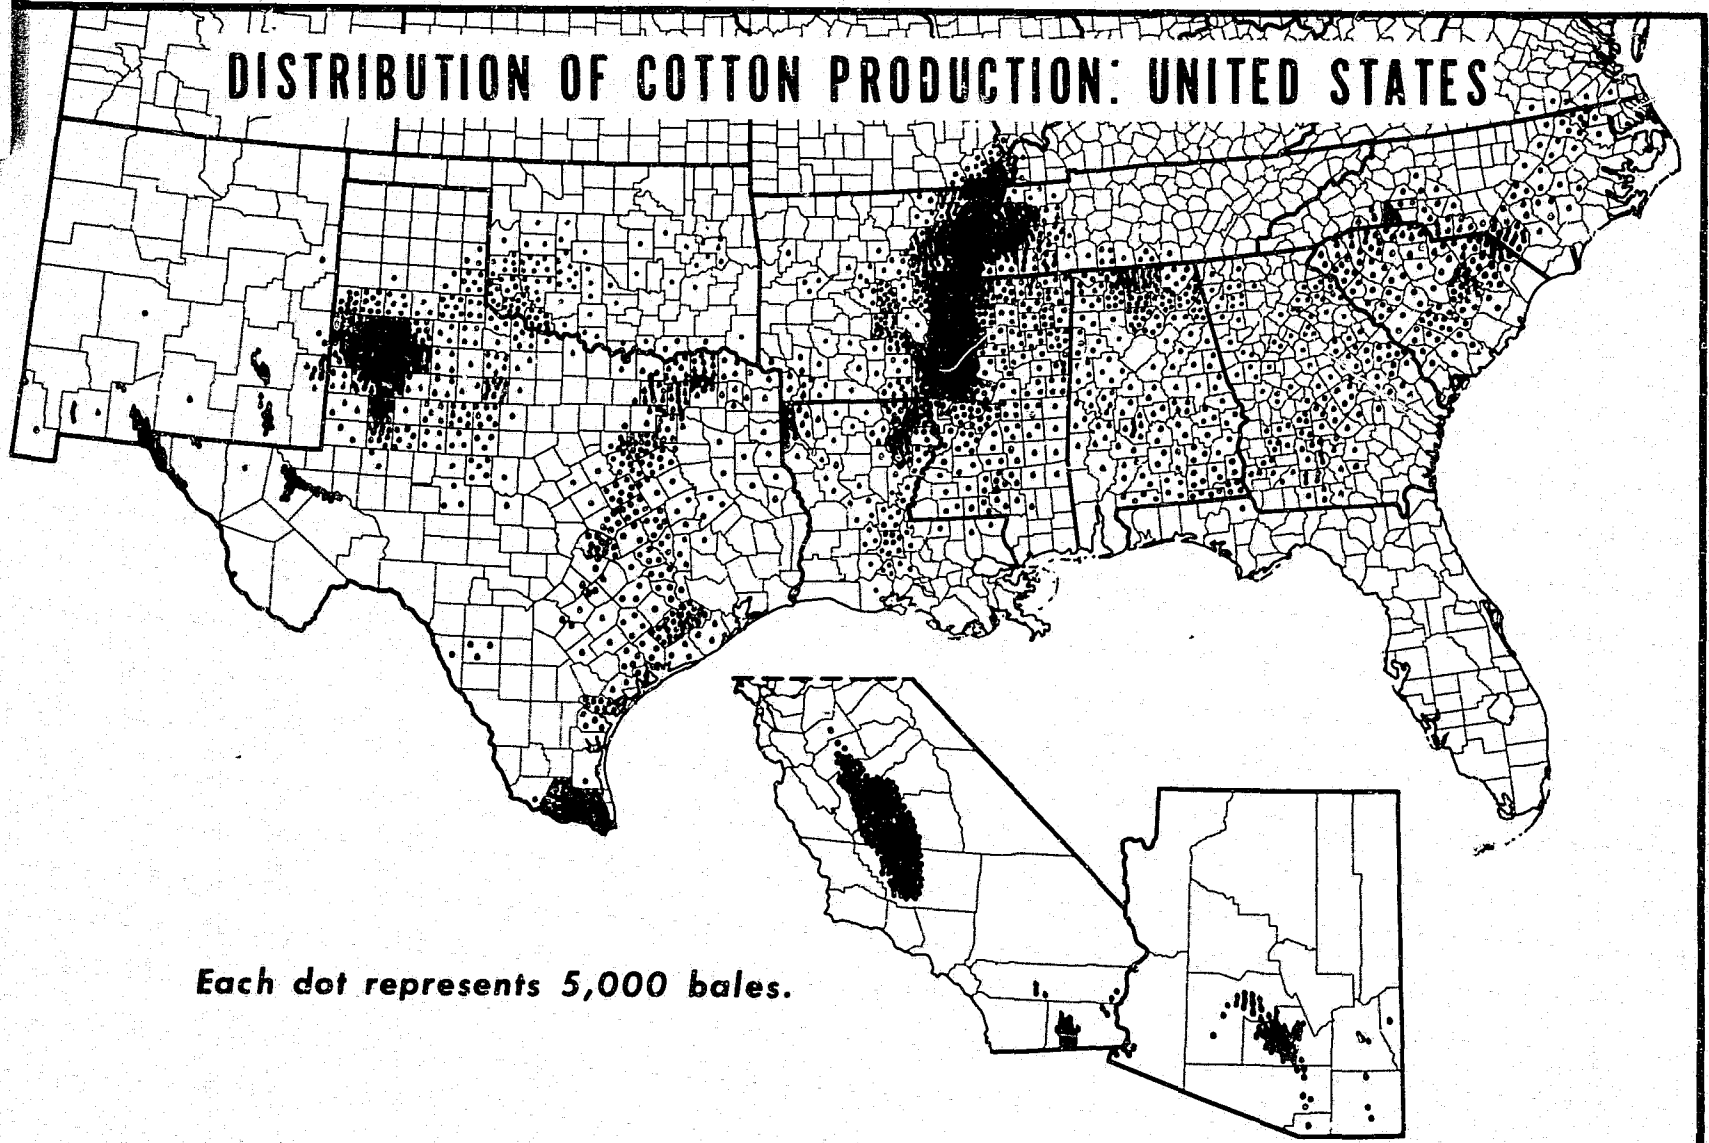

The report for the carry-over includes statistics on the grade and staple of upland and American-Egyptian cotton and on the staple of cotton of foreign growth in the United States on August 1, 1958. Estimates on the quality of cotton in the 1958 carry-over were based on actual re-sampling and classification of a representative proportion of the cotton stored in mills and in public storage including CCC stocks. Sample data were compiled for each State and for the principal types of storage and were raised to correspond with the number of bales reported by the Bureau of the Census.

Strict Good Middling was reinstated in the standards for White cotton effective August 1, 1957. The Official Cotton Standards for Grades of American-Egyptian cotton were revised effective August 1, 1957 to reflect the varietal characteristics of current American-Egyptian crops.

Data presented in this bulletin on the tenderability of cotton on futures contracts indicates the quantities tenderable and untenderable with respect to grade and staple.

Throughout this report the official grade designations are abbreviated as follows: Strict Good Middling, S.G.M.; Good Middling, G.M.; Strict Middling, S.M.; Middling, M.; Strict Low Middling, S.L.M.; Low Middling, L.M.; Strict Good Ordinary, S.G.O.; Good Ordinary, G.O.

DISTRIBUTION OF COTTON PRODUCTION: UNITED STATES

Each dot represents 5,000 bales.

^{1/} Computed by weighting the quantity in each grade by the 1937-39 average price per pound for such grade of 15/16 inch staple. Converted to an index with Middling White equaling 100.

^{2/} Averages calculated on numerical equivalents of the staple designations (for example, 29/32" = 29).

^{3/} Includes Illinois and Kentucky.

1/ Official standards for Extra White cotton abolished effective August 15, 1953. White and Extra White combined in 1952 and earlier years and Good Middling includes higher grades.

2/ Other Colored includes Low Middling Spotted; all grades of Tinged, Yellow Stained and Gray.

3/ As reported by the Bureau of the Census.

4/ Carry-over at the beginning of the season plus crop.

5/ Supply minus carry-over at the end of the season.

Table 57. -- Carry-over, crop, supply and disappearance of upland cotton, by staple groupings, United States, 1941-58

Season beginning August 1	13/16" and shorter 1,000 bales	7/8" and 29/32" 1,000 bales	15/16" and 31/32" 1,000 bales	1" and 1-1/32" 1,000 bales	1-1/16" and 1-3/32" 1,000 bales	1-1/8" and 1-5/32" 1,000 bales	1-3/16" and 1-7/32" 1,000 bales	1-1/4" and longer 1,000 bales	All lengths 1,000 bales
