## FOREWORD

This report supersedes Statistical Bulletin No. 186, published in May 1956. The data presented in charts and tables represent revisions in cash receipts back to 1946, and two more years have been added to the series.

Several changes in the presentation of material have been made in both charts and tables. Data are shown here for individual commodities only, rather than for groups of commodities, except that dairy products are considered a single commodity. One item was dropped from the tables (percent of farms that are commercial), and four items were added (number of farms, cash receipts from Government payments, and percentages of total cash receipts from livestock and products and from crops). In the charts, the original report used a constant scale for all the States, whereas the scale used here varies from State to State. The constant scale had some value in making comparisons between States, but the varied scale gives a better picture for each particular State.

In order to give further information about the "other" categories of commodities in each State, a supplementary table has been added at the end of the report, with a breakdown of the more important items included. There is also an additional table for each of the years covered, showing cash receipts from each commodity group as a percent of the total, by States.

CASH RECEIPTS FROM MAJOR FARM COMMODITIES, BY STATES,  
AS PERCENTAGE OF STATE TOTALS, 1924-57

Agricultural Economics Division  
Agricultural Marketing Service

WHAT THIS PUBLICATION SHOWS

The purpose of this publication is to show the changes that have occurred since 1924 in the relative importance of individual commodities in their contribution to total cash receipts from farm marketings in each State, and since 1910 in the country as a whole. Prior to 1946 the United States estimates include some revisions not yet incorporated by States. State data, arranged alphabetically, are followed by national data. Because of limited space, only the more important commodities are included in the main tables and charts. A further breakdown of the "other" commodities and data by commodity groups are shown in separate tables at the end of the report.

In about half the States, the importance of livestock has increased significantly, and crops have declined accordingly, as a proportion of the whole. Receipts from livestock and products in the United States rose from 47 percent of all commodities in 1924 to 58 percent in 1957. The major part of this increase was due to cattle and dairy products, whereas the relative importance of cotton declined substantially. The largest livestock gains, however, occurred in the southern States, where the rising broiler industry was also an important factor.

About 150 different commodities contribute to the total agricultural income of the country. Only about an eighth of these items are included in the livestock category, and the rest are crops. No one State reports the sale of all these commodities. The number of items tends to run larger in the Pacific States and in Texas.

The present pattern of commodity participation in the agriculture of any particular State is the product of an evolutionary process. Because of the increase in population, expansion of markets, change in tastes, growing need of agricultural products in industry, variation of foreign requirements, and other factors, commodity demand has always been changing in both quality and variety. Agricultural producers try to meet these needs. The result has been a tremendous change in the long-run character of agricultural production in nearly all States and regions.

All are familiar with the westward movement of livestock and grain production in the 19th Century as a phase of our agricultural history. In more recent years we have seen, among other changes, the increase in

cattle production, expansion of the broiler industry, especially in Georgia and the Del-Mar-Va area, extension of the cotton-producing area to some of the western States, together with a decline in total cotton production and increase in soybean production in many of the States in the central part of the country. With these shifts in production have come comparable changes in the kinds of commodities and the quantities of each commodity marketed in each State.

The combination of these highly variable quantities with constantly changing prices has resulted in values of marketings that differ a great deal from year to year for the same commodity and for the total of all commodities in the same State. Consequently, the share that each commodity has contributed to total cash receipts in any State has sometimes been extremely variable.

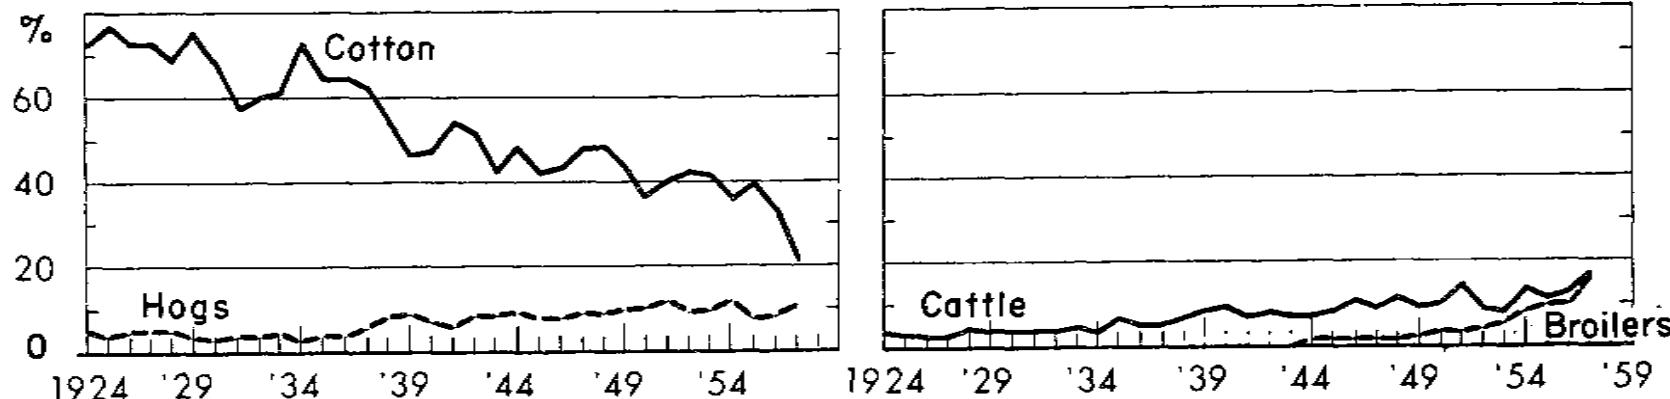

The basic data used in this report are the annual estimates of cash receipts from farm marketings by States, as computed by the Farm Income Branch of the Agricultural Marketing Service. The annual estimate of cash receipts from each of the more important commodities in each State was divided by the comparable estimate of total cash receipts, to obtain percentages representing the commodity contribution to the State total. For each State, these commodity percentages are shown in tabular form at 5-year intervals from 1924 to 1954 plus each of the years 1955-57. Data for a few selected commodities are presented for each State in graphic form for each year 1924-57. The table and charts for the United States cover data for all years back to 1910.

Data on number and average size of farms, total and per-farm cash receipts from farm marketings, and direct Government payments to farmers are included as relevant information. Figures on average size of farms were taken from Census reports. The third column contains the totals of cash receipts used as a basis for the individual commodity percentages. The commodity estimates of cash receipts used in working out the percentages are components of these totals. The percentages for livestock and products and for crops add to 100 percent, and those for individual commodities, including the "other" category, also add to 100 percent.

Estimates of cash receipts for the years before 1946 are still subject to revision. Revisions will be made for certain commodities, by States, and for the United States. Probably the value of this publication will be found not so much in exactness of data for any particular commodity or year as in the general direction of trends in the commodity percentages, and the shifts in the commodity composition of total cash receipts in the long run. It is not expected that the revisions will make any significant change in these over-all trends or in the relative importance of different commodities in relation to State totals.

# Alabama

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

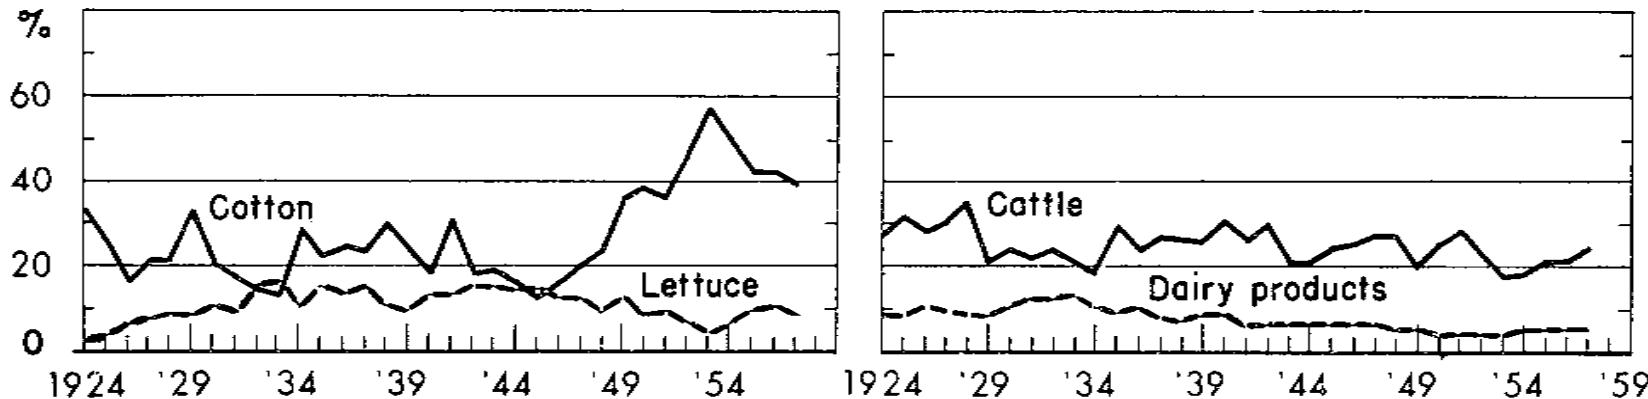

Total livestock and products have increased in importance from 14 percent of total cash receipts in 1924 to 56 percent in 1957. Cotton has declined from 72 percent to 21 percent in the same period, whereas the relative importance of cattle and calves, broilers, and hogs has increased significantly.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

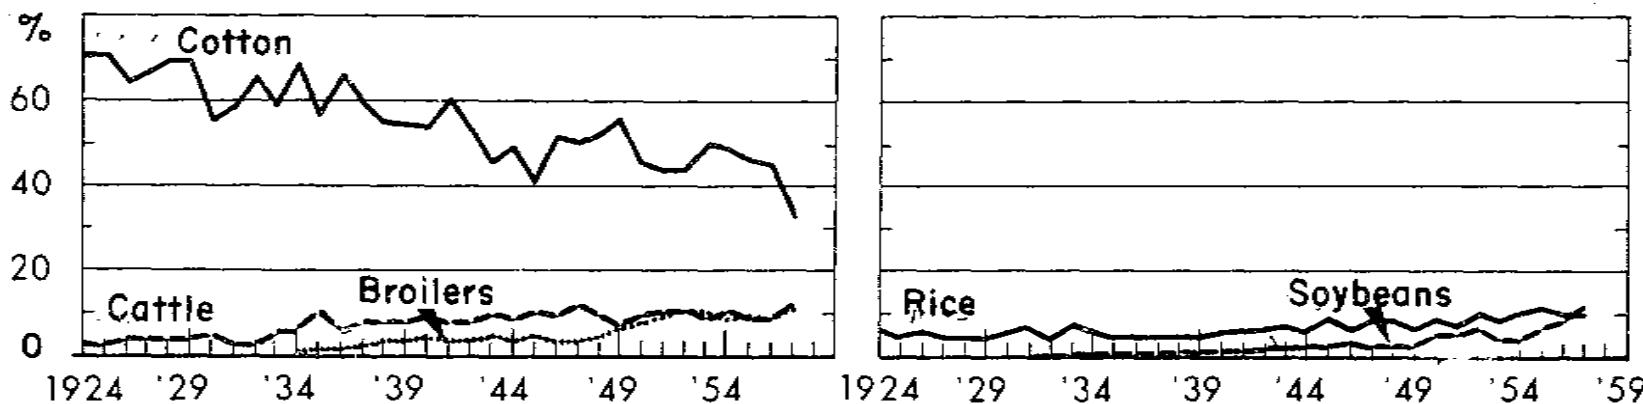

Cash receipts from livestock and products as a percent of the total have shown a moderate downward trend since 1924. Cotton and cattle, the two most important commodities, remained at about the same level through 1948, but since then cotton has shown a significant gain. Lettuce, after increasing from 2 to 15 percent, has declined somewhat since 1943. Dairy products have decreased in importance, but still occupy fourth place.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

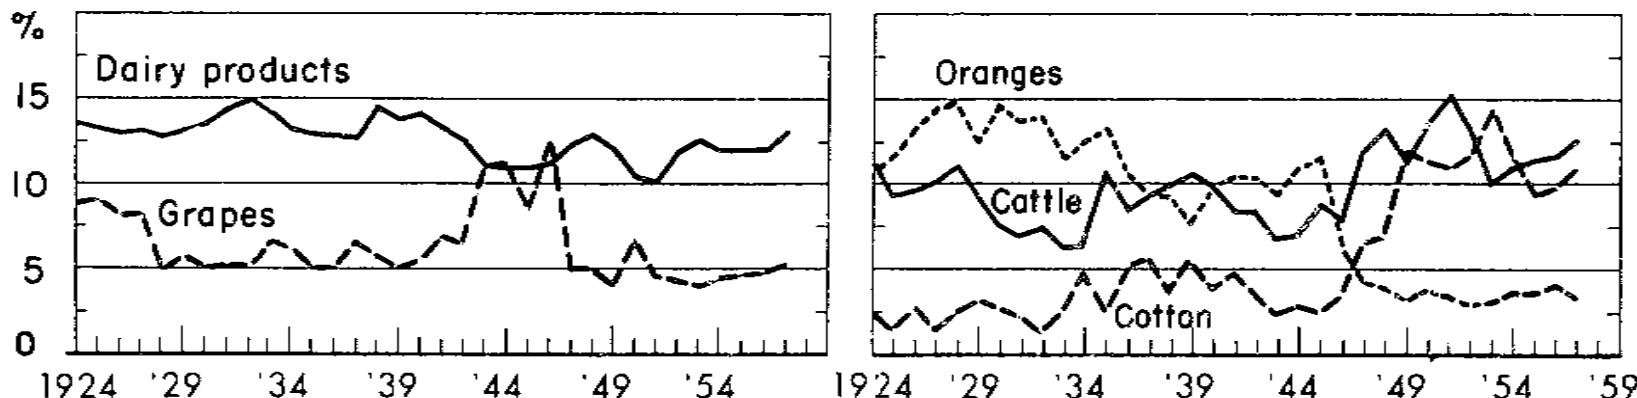

Crops declined from seven-eighths of total cash receipts in 1924 to five-eighths in 1957. Cotton's share of the total dropped from 70 to 32 percent in the same period, although it is still the most important commodity. Cattle and calves, broilers, soybeans, and rice have made significant gains.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

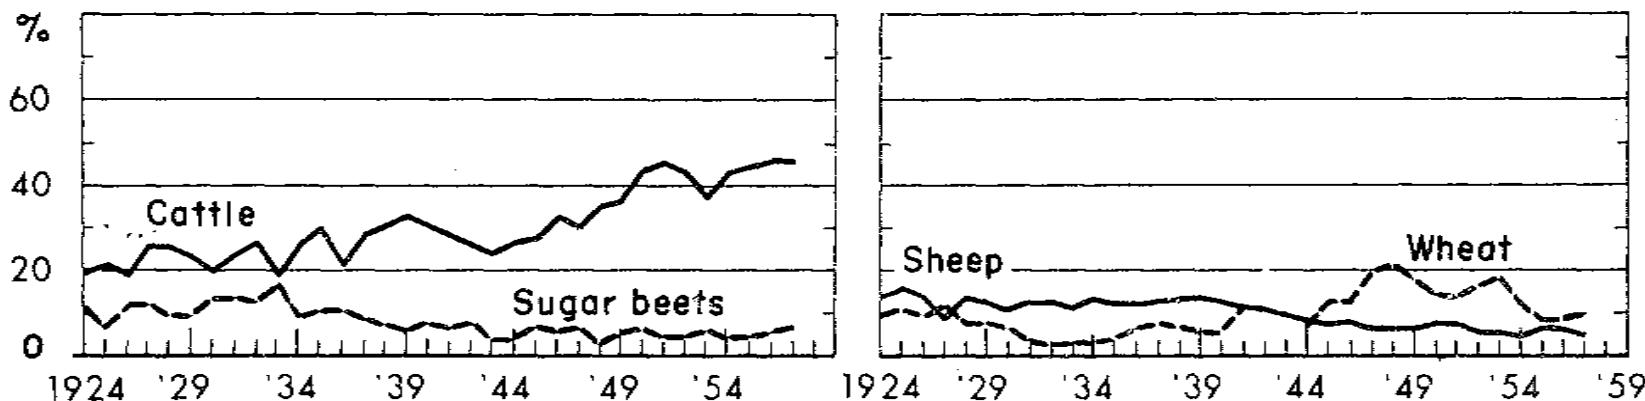

Dairy products and oranges held first place among the commodities during the early part of the period 1924-57, each accounting for as much as 15 percent of total cash receipts. The importance of dairy products has declined slightly, and oranges have dropped to only about 3 percent of the total during the past decade. In recent years, cattle and calves and cotton have become as important as dairy products, with cotton rising from 2 percent in 1924 to 11 percent in 1957. Grapes remained around 5 percent for most years, but between 1943 and 1946 they ranked among the three most important commodities.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

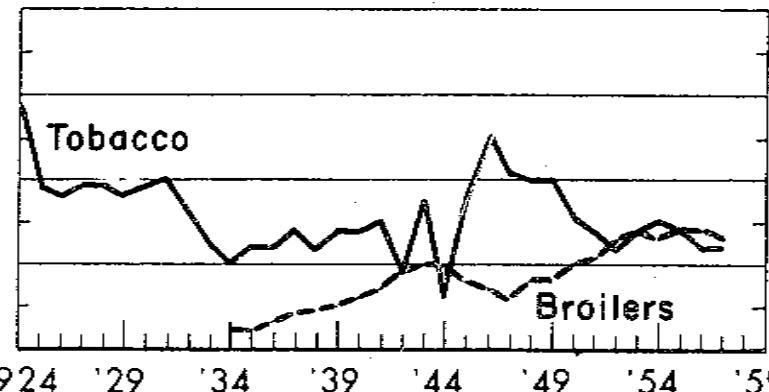

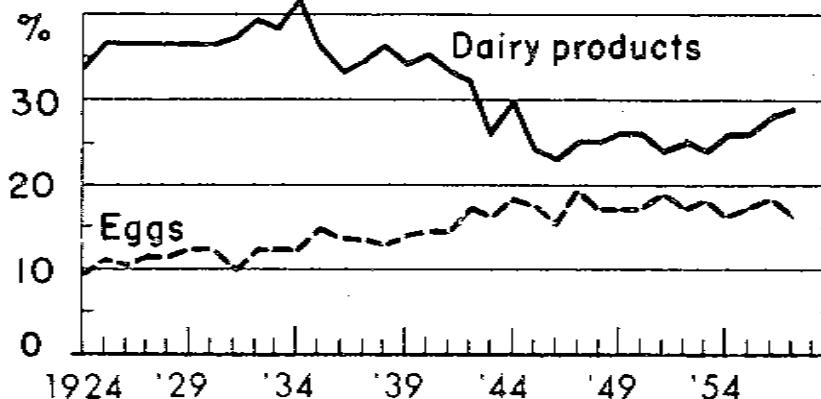

Cattle and calves, consistently the most important commodity, increased from 19 percent of total cash receipts in 1924 to 45 percent in 1957. The contribution of sugar beets and sheep and lambs declined considerably. Wheat varied between 2 and 21 percent, but its share of the total at both the beginning and end of the period was around 10 percent.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

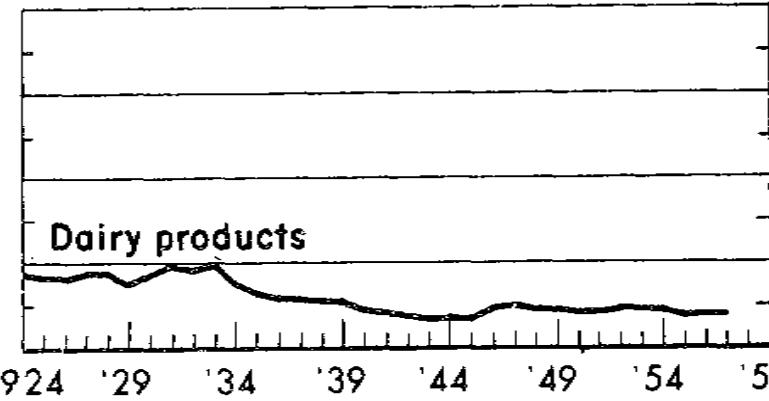

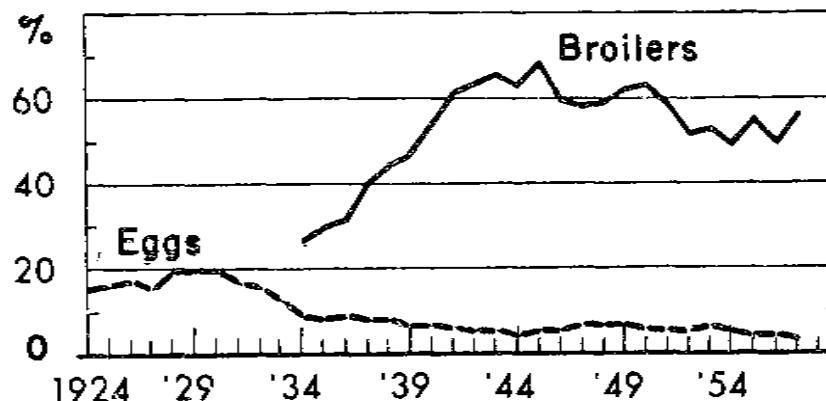

Cash receipts from dairy products reached a high point of 42 percent of the State total in 1934, but have since declined to less than 30 percent. Eggs showed a steady increase in importance until the war years, and since then have remained fairly constant. Tobacco has generally remained between 10 and 20 percent of total receipts. Broilers increased steadily until 1953, and for recent years have remained fairly stable.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

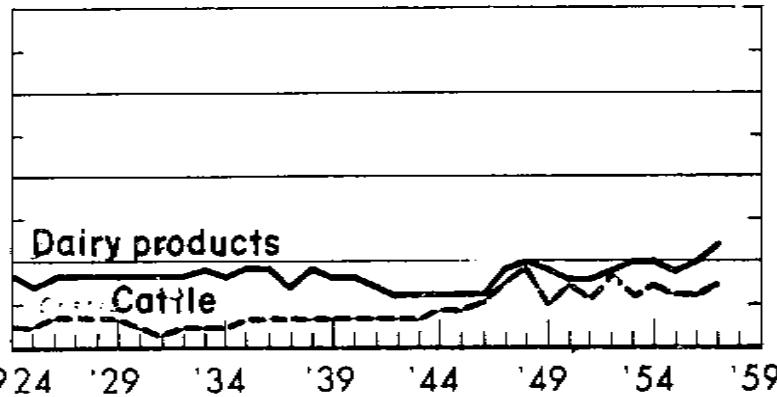

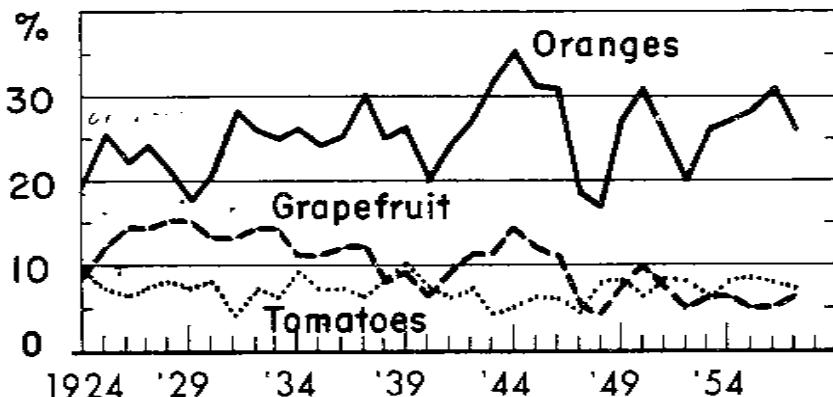

Cash receipts from livestock and products increased from 42 percent of the total in 1924 to 86 percent in 1945, although their importance has declined somewhat since then. This gain was due to the phenomenal growth of the broiler industry, which more than offset significant declines in the relative importance of dairy products and eggs. The contribution of soybeans to the total has increased, but tomatoes, wheat, and apples have declined.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

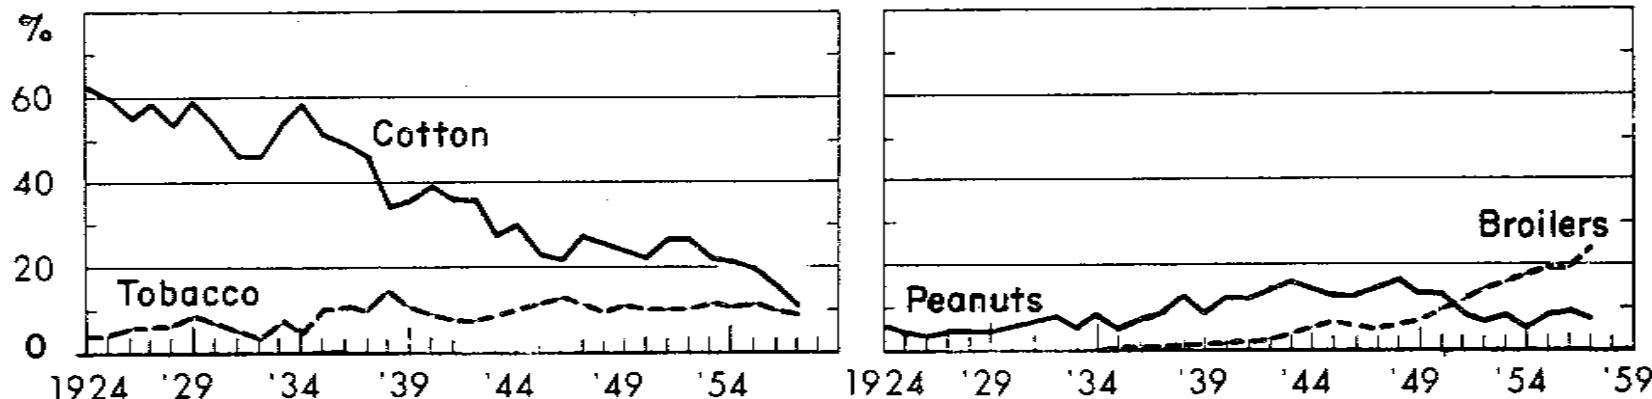

Oranges and grapefruit have varied in importance, but oranges show a slight upward trend and grapefruit a downward trend. Dairy products increased as a proportion of the total since 1946, and cattle and calves since 1943. Tomatoes maintained a level between 5 and 10 percent for most years.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

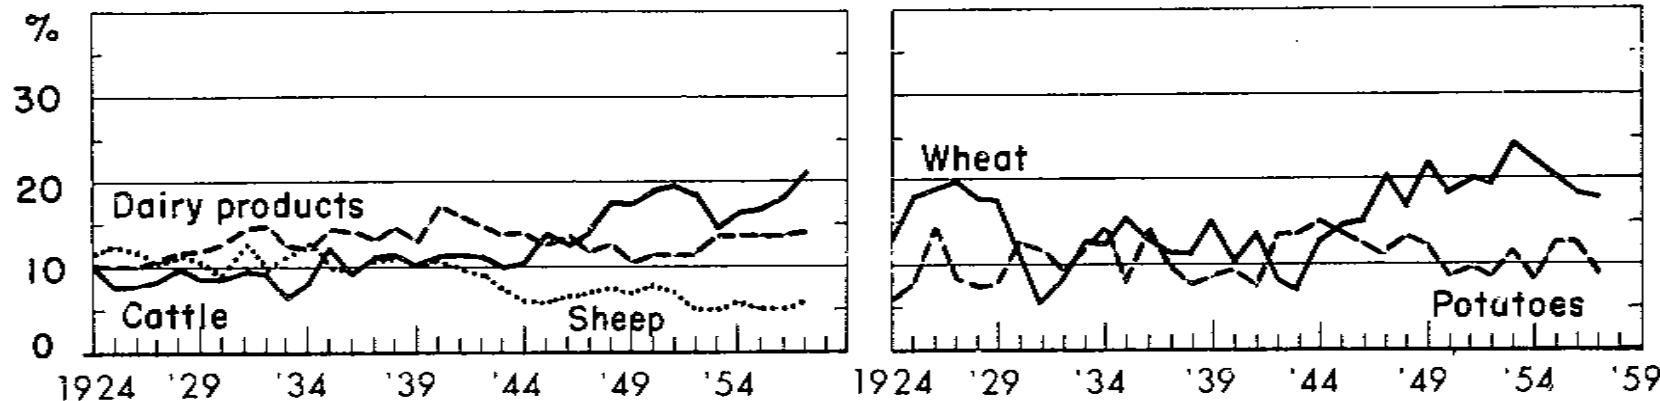

Livestock and products have increased from 13 to 57 percent of total cash receipts since 1924. Broilers are now the most important commodity, accounting for one-fourth of total cash receipts in 1957. Cotton contributed nearly two-thirds of the total in 1924, but only one-tenth in 1957. Tobacco's share has tripled. Peanuts rose to 16 percent in 1948, but dropped to 7 percent in 1957.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

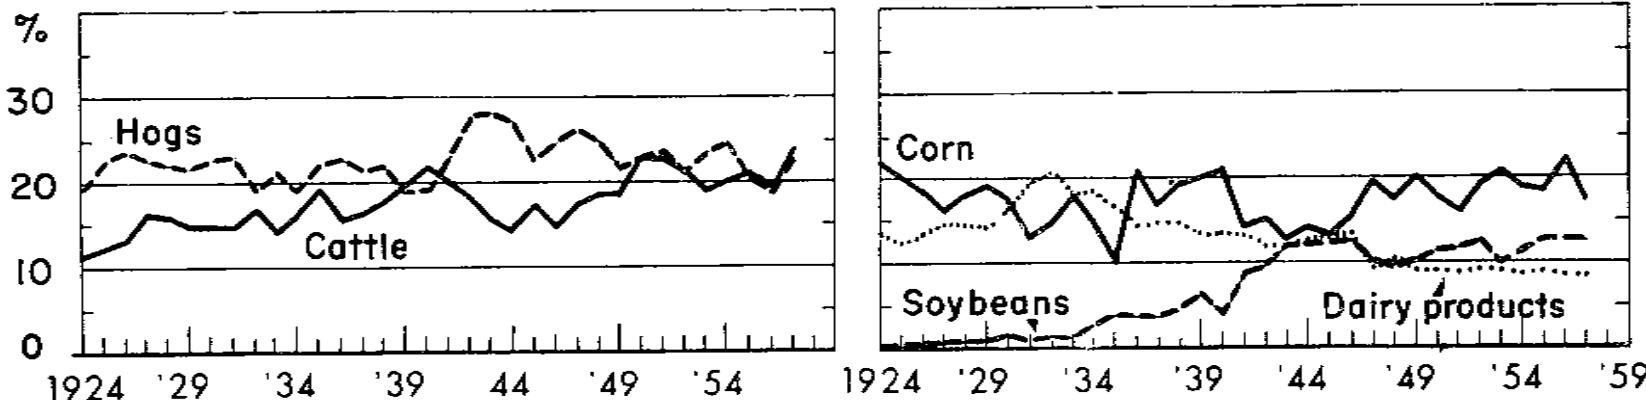

Crops have accounted for a little more than total cash receipts during most of the entire period since 1924. Cattle and calves have increased in importance; sheep and lambs have declined. Wheat's share of the total dropped sharply between 1927 and 1931, and then rose to a new high in 1953. Dairy products generally varied between 10 and 15 percent, and potatoes between 5 and 15.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

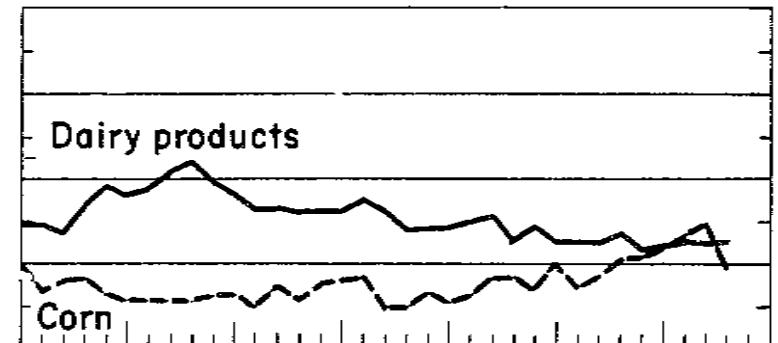

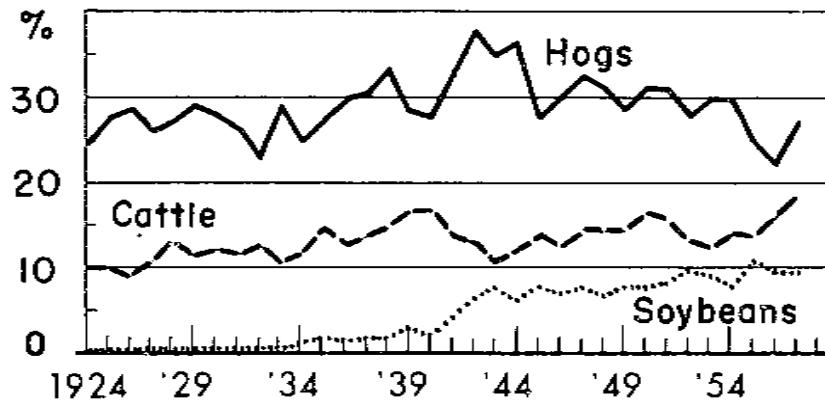

Livestock and products have accounted for a little over half of total cash receipts for the entire period since 1924. Cattle and calves and soybeans have shown significant gains, but dairy products, eggs, oats, and chickens have declined in relative importance. Hogs and corn remain among the leading commodities--hogs between 20 and 30 percent of the total for most years, and corn between 10 and 20 percent.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

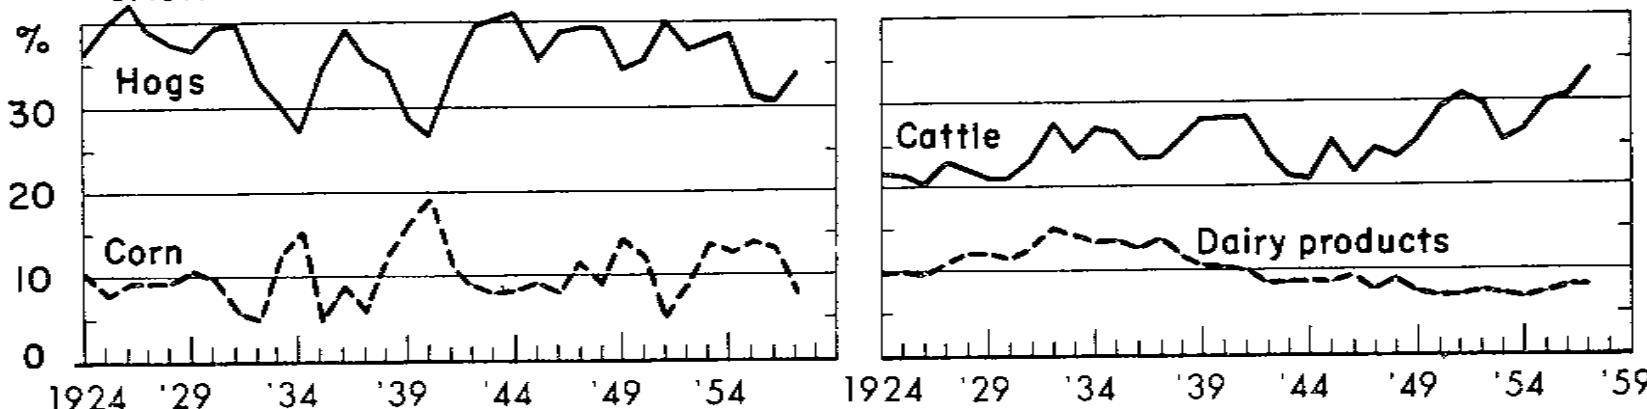

Hogs increased from 24 percent of total cash receipts in 1924 to 30 percent in 1942, then declined to 22 percent in 1956 but took an upward turn in 1957. Cattle and calves have nearly doubled in importance, and soybeans rose from practically zero in 1924 to 11 percent in 1955 and then dropped slightly. Dairy products reached a peak of 22 percent in 1932, but gradually declined to 12-13 percent in the past decade. For most years, corn varied between 5 and 10 percent, although it reached a peak of 15 percent in 1956.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

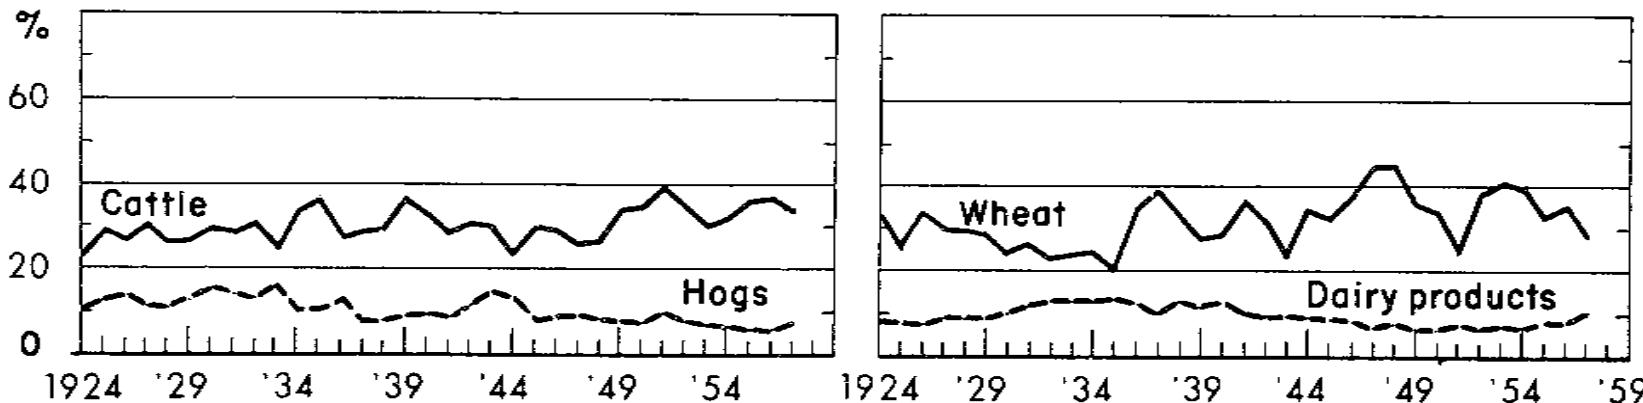

Hogs and corn have been consistently important since 1924, although with considerable variability, and their variations as percentages of total cash receipts show a marked complementary pattern. Cattle and calves rose from 21 to 34 percent over the period. On the other hand, dairy products in 1957 were only a little more than half their importance in 1932.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

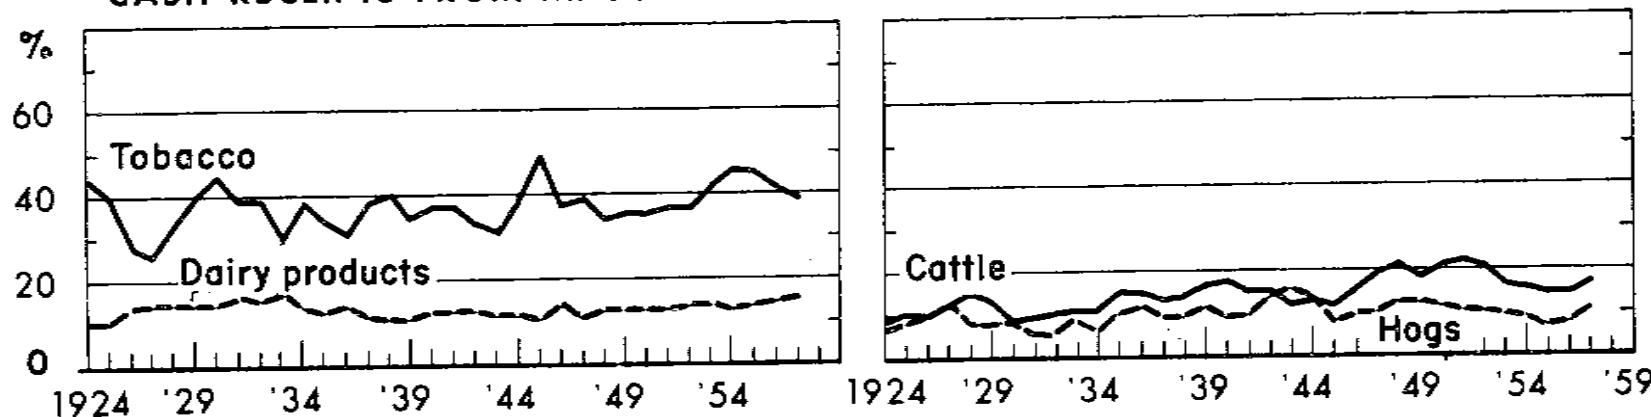

Cattle and calves and wheat both vary between 20 and 40 percent of total cash receipts, except that wheat reached 43 and 44 percent in 1947 and 1948 respectively. Hogs declined slightly in relative importance since 1933, and dairy products since 1940, but both made an upward turn in 1957.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

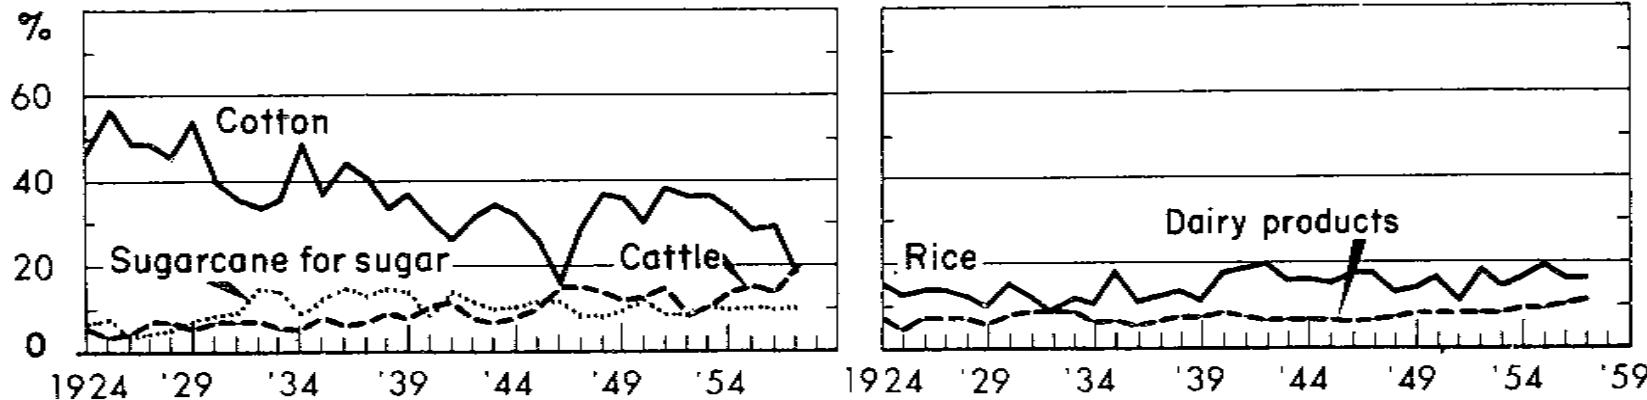

Tobacco, by far the most important commodity, varies between one-fourth and one-half of total cash receipts, at the same time showing a slight upward trend. Cattle and calves, dairy products, and hogs have been consistently the next commodities in importance, with the contribution of cattle and calves more than doubling since 1924.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

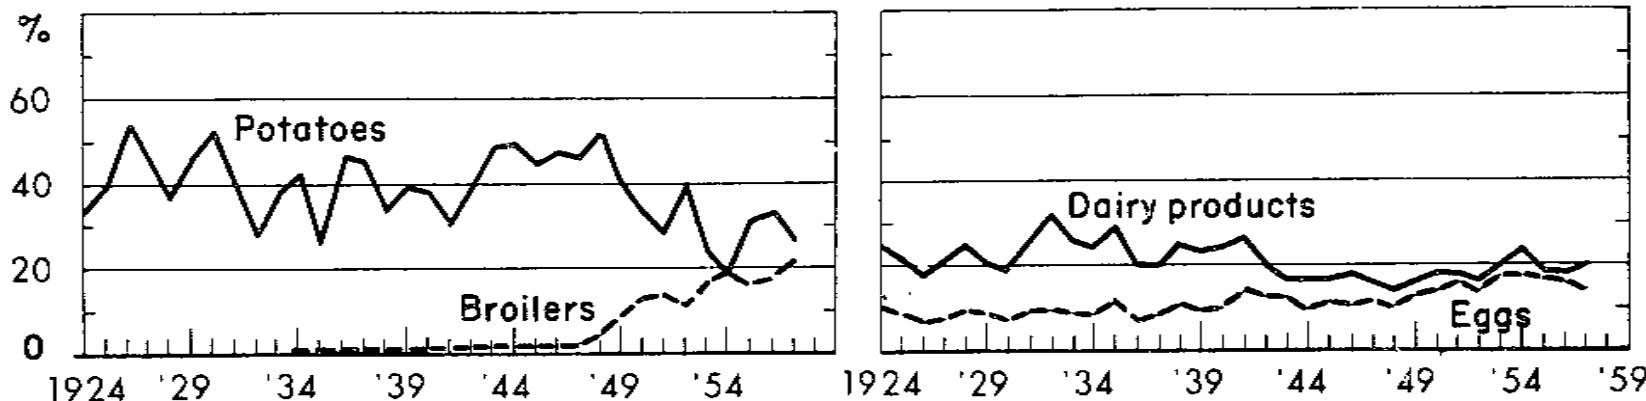

The contribution of crops to total cash receipts dropped from over four-fifths to three fifths between 1924 and 1957. Cotton, by far the most important commodity for two decades, declined sharply until in 1946 it was equaled by cattle and calves, rice, and dairy products, which along with sugarcane for sugar have shown a gradual upward trend.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

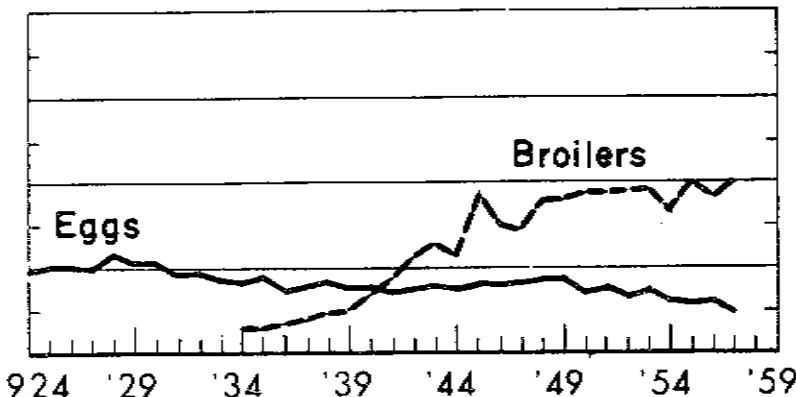

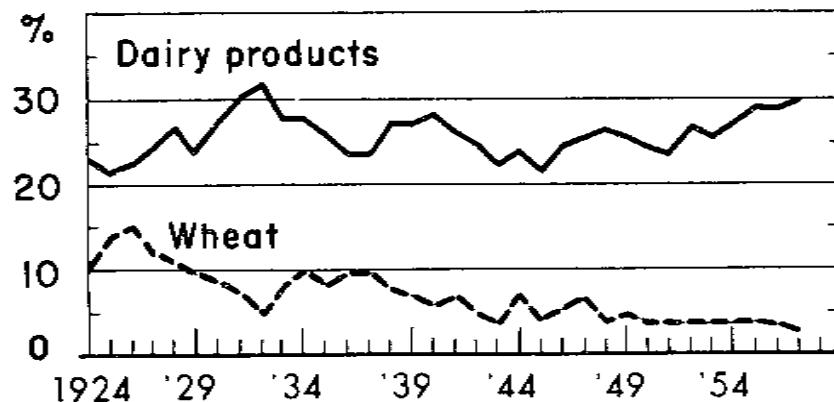

Potatoes and dairy products were, for nearly three decades, the most important commodities, but between 1948 and 1954 potatoes dropped from one-half to less than one-fifth of total cash receipts, and dairy products declined gradually between 1932 and 1948, recovering slightly since then. In the meantime, eggs increased gradually and broilers rose sharply in importance, so that in recent years all four commodities have been fairly equal.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

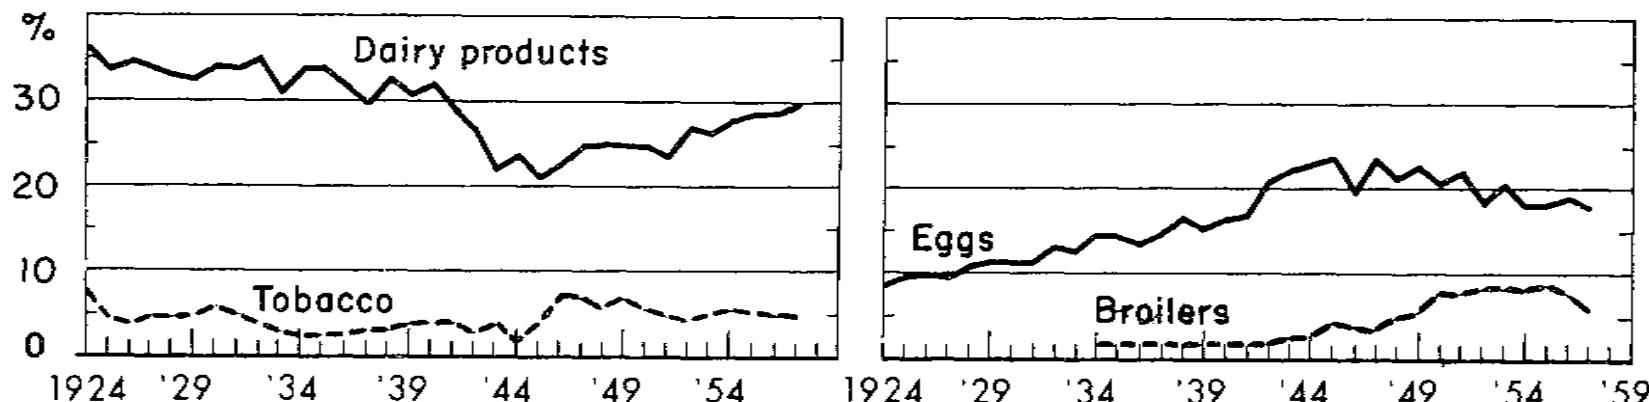

Dairy products account for about 20 to 30 percent of total cash receipts, with an upward trend since 1945. Broilers rose from 2 percent in 1924 to 20 percent in 1957. Wheat and eggs, on the other hand, have declined considerably in relative importance.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

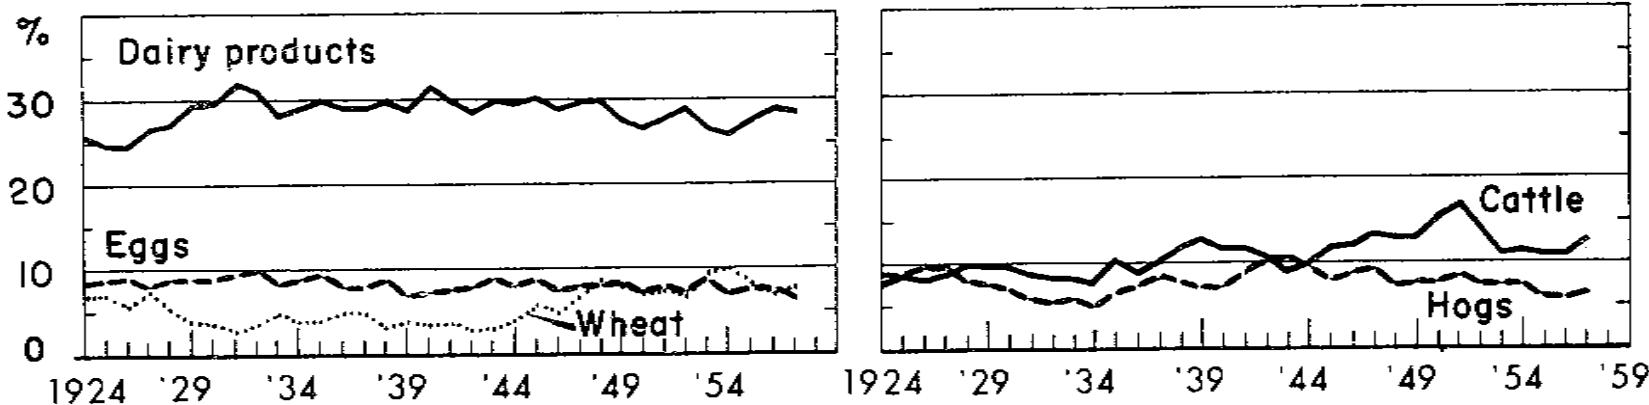

Lairy products and eggs, the most important commodities, show a marked complementary pattern. Dairy products declined as a percent of total cash receipts for two decades following 1924, and then showed an upward trend, whereas the reverse was true of eggs. Tobacco varied from 1 to 7 percent of the total. Broilers' share rose for a decade after 1941, then leveled off and dropped in the last two years.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

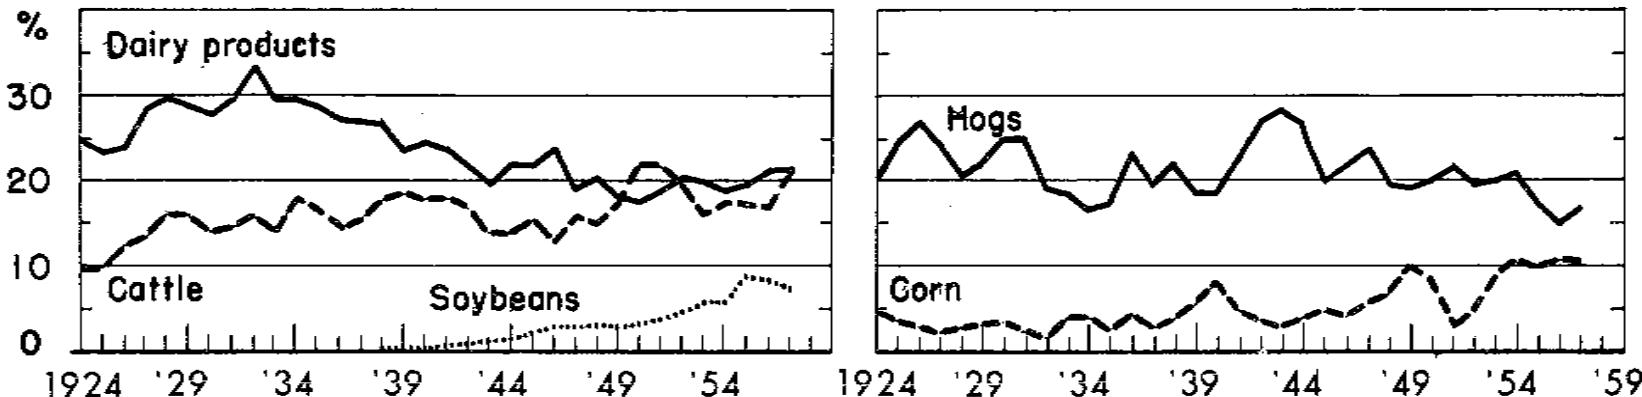

The contribution that dairy products have made to total cash receipts has been relatively stable at 25-30 percent. Cattle and calves show a slight upward trend, and since 1945 have become second in importance. Eggs and hogs have remained steady between 5 and 10 percent of the total, and for the past decade wheat has risen to an equal level.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

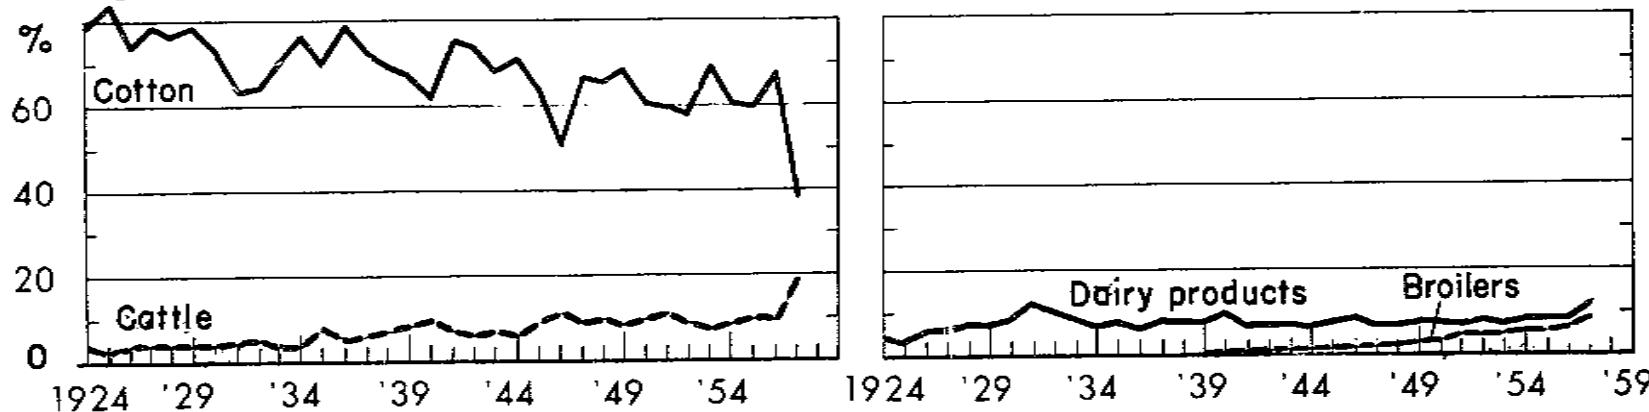

With a decline in the relative importance of dairy products, an increase in cattle and calves, and a fairly stable though variable contribution of hogs, during the past decade these three commodities have each accounted for approximately 20 percent of total cash receipts. Corn's share more than doubled since 1924, and in less than two decades soybeans have risen from zero to 7 or 8 percent.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

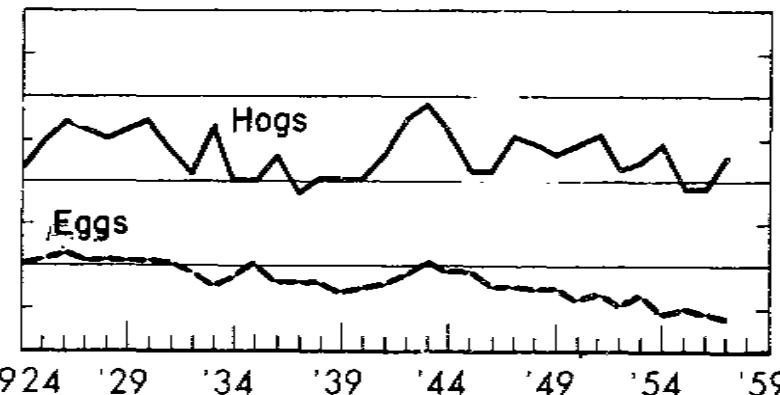

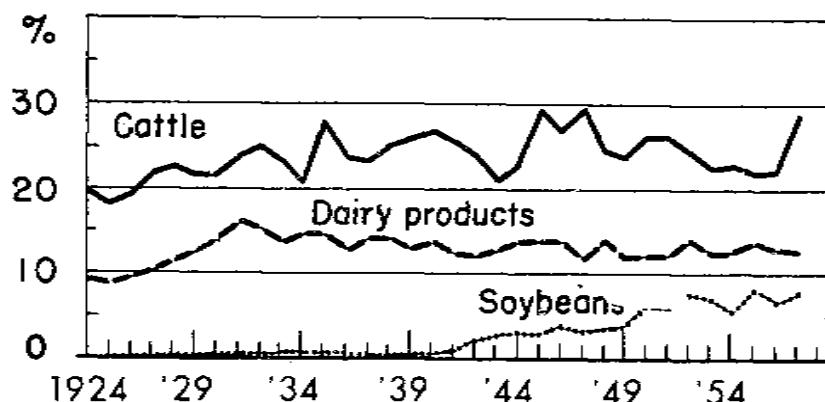

Crops' share of total cash receipts has declined from 86 to 54 percent since 1924. Cotton is still by far the most important commodity, although its contribution to the total in 1957 was only about half as large in relation to other commodities as in 1924. In the meantime, cattle and calves and broilers made gradual gains, while dairy products remained for the most part between 5 and 10 percent of the total.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

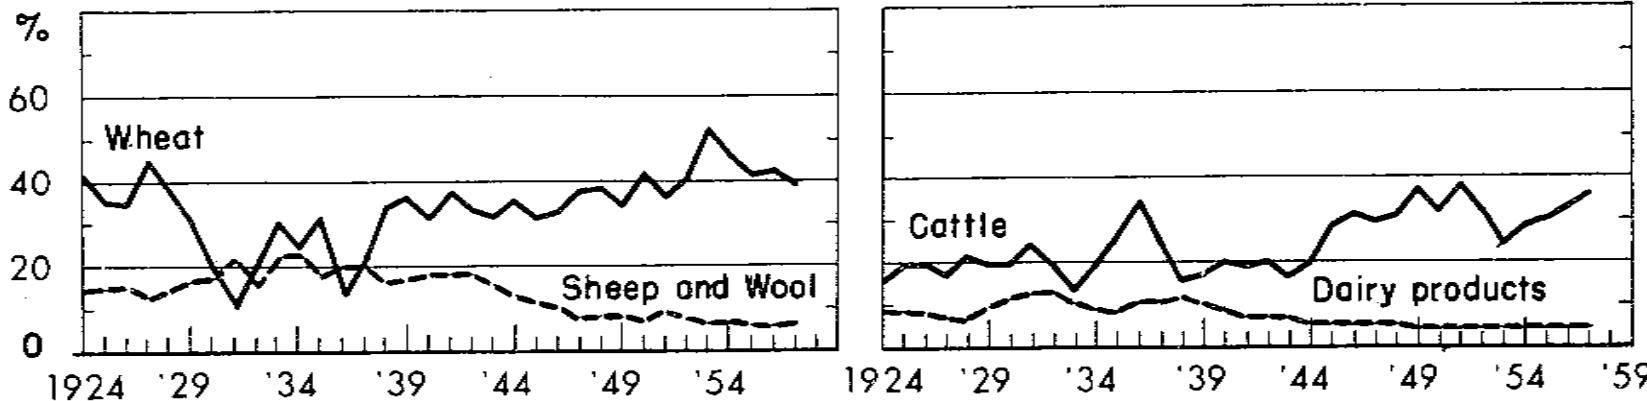

Cattle and calves and hogs have both accounted for about 20-30 percent of total cash receipts, with an upward trend in the share of cattle and calves. Dairy products have remained stable for the most part between 10 and 15 percent of the total. During the past two decades or so, soybeans have risen sharply while eggs declined.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

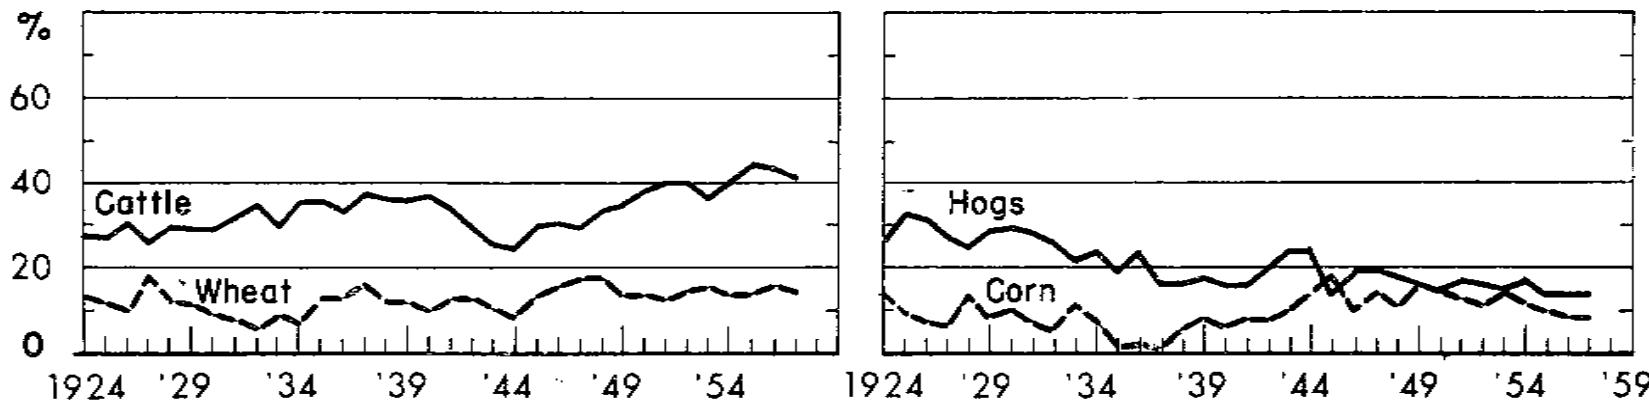

Total cash receipts have been about evenly distributed between livestock and crops for the entire period since 1924. Wheat has been the most important commodity for most years, beginning and ending around 40 percent of the total. However, cattle and calves have increased in their relative values until they are now almost as important as wheat. Dairy products, sheep and lambs, and wool have declined somewhat.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

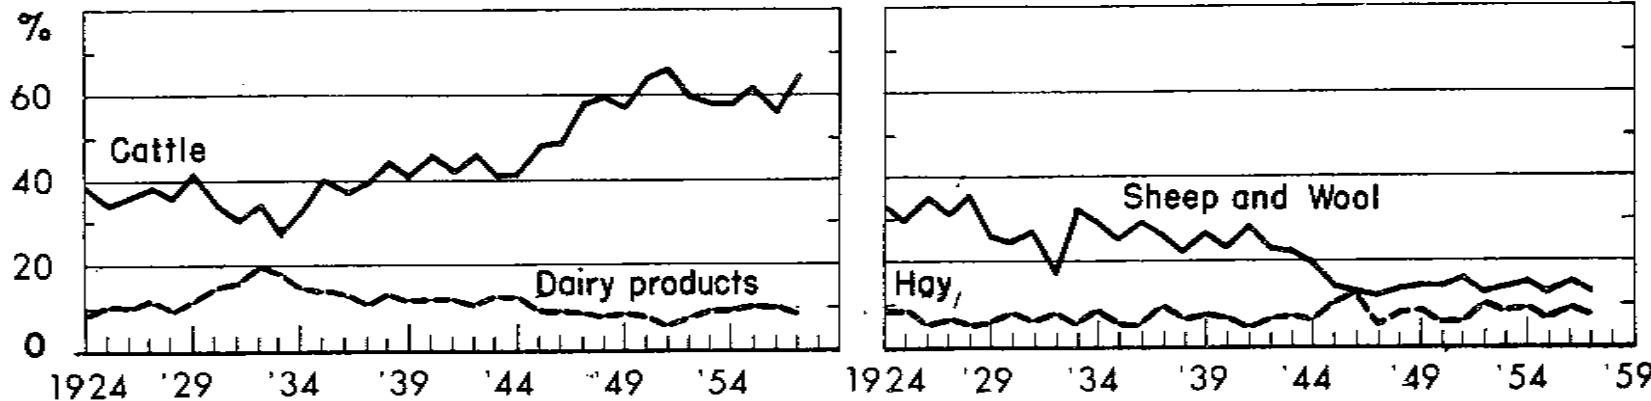

Livestock and products for most years have accounted for at least two-thirds of total cash receipts. Cattle and calves increased from 27 percent of the total in 1924 to 42 percent in 1957, but hogs declined from 26 to 14 percent. Wheat and corn have occupied the next two places in rank for most years.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

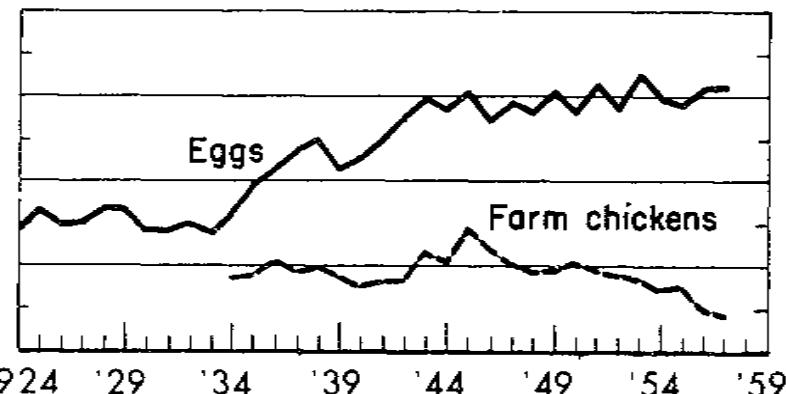

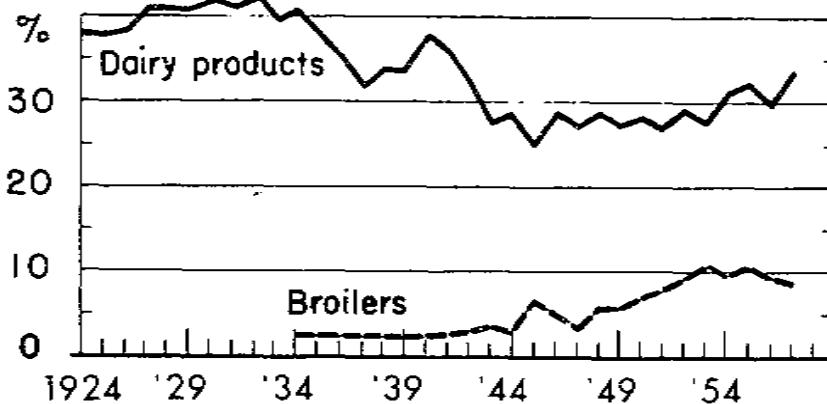

Cattle and calves climbed from 27 percent of total cash receipts in 1933 to 66 percent in 1951 and 64 percent in 1957. Sheep and lambs and wool, on the other hand, were only half as important in 1957 as in 1924. Dairy products and hay have been fairly stable, and for the past two decades they have each accounted for about 5-10 percent of the total.

## New Hampshire

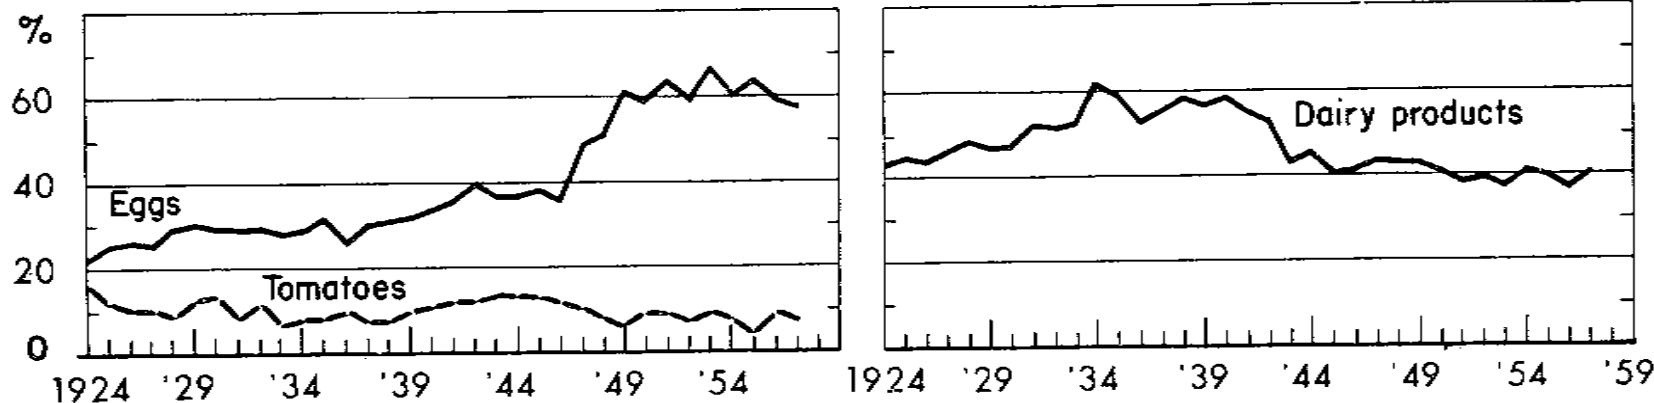

**CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL**

Dairy products contributed around 40 percent of total cash receipts for a decade following 1924, but declined to 25 percent in 1945. In the meantime, eggs made a steady gain, and for the past decade or so the two commodities have shown an upward trend, between 25 and 30 percent of the total. In recent years broilers have risen sharply, while farm chickens declined.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

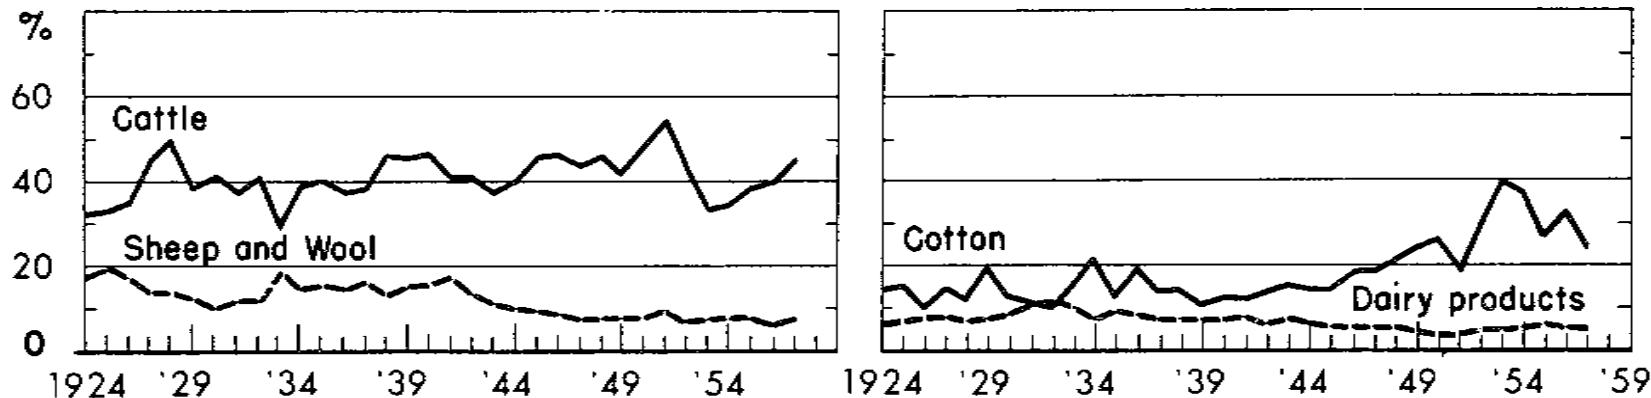

- 31 -  
 Livestock's share of total cash receipts has risen from 42 to 61 percent since 1924. Dairy products, the most important commodity for two decades, have shown a downward trend since 1939, and eggs have now risen to first place with a contribution of around one-third of total cash receipts in recent years. The relative importance of tomatoes has shown a gradual decline.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

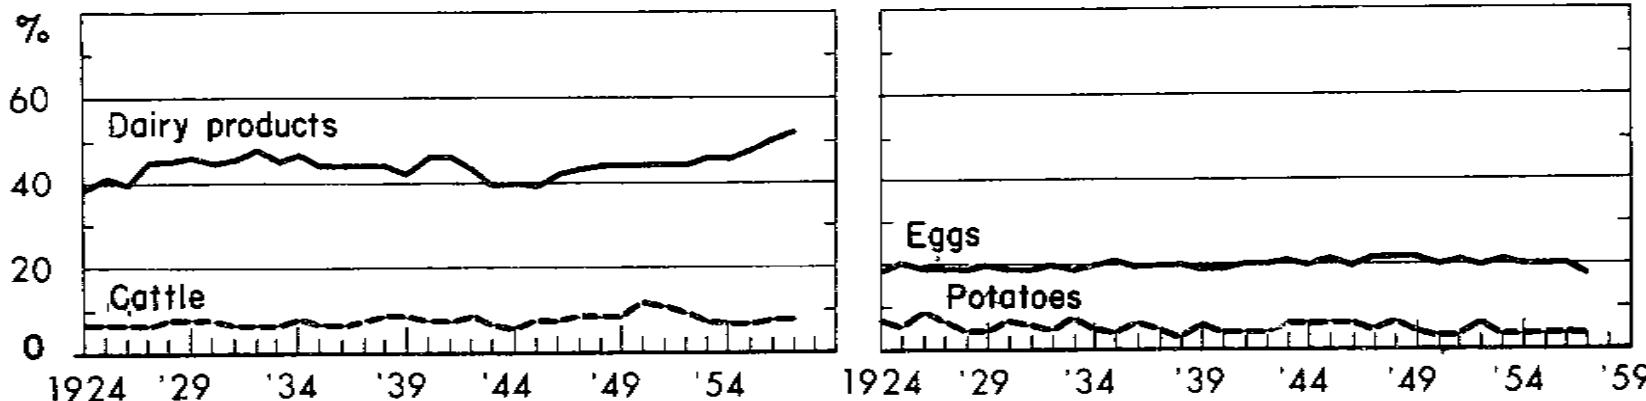

Cattle and calves have contributed from 30 to 50 percent of total cash receipts for most years since 1924. Cotton's share rose from 11 percent in 1939 to 45 percent in 1953, but fell to 24 percent in 1957. Sheep and lambs and wool have declined to less than half their former level of importance. Dairy products remained between 5 and 10 percent for most years.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

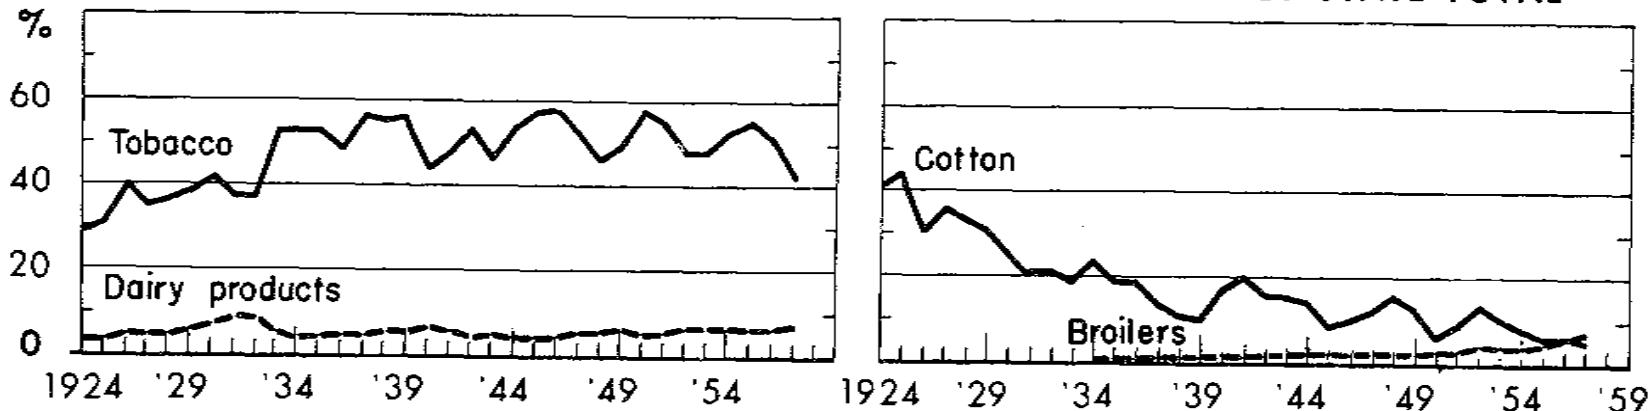

Cash receipts from dairy products have remained stable between 40 and 45 percent of total cash receipts for most years, with an up-turn at both the beginning and the end of the period 1924-57. Eggs have run consistently around 20 percent of the total, and cattle and calves and potatoes were also relatively stable at lower levels.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

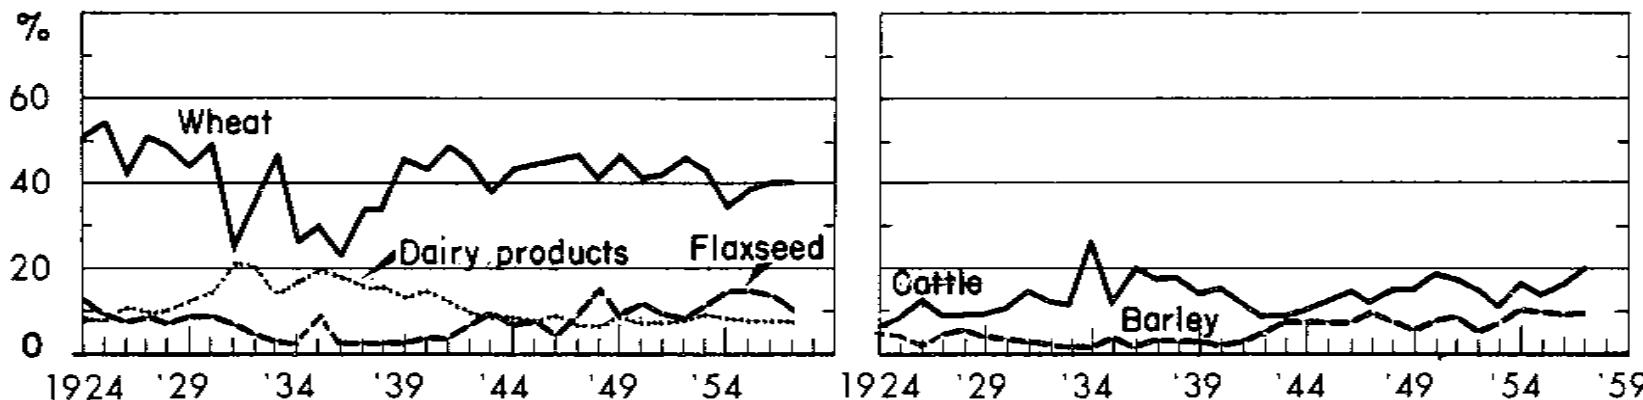

Crops declined from 88 percent of total cash receipts in 1924 to 70 percent in 1957. Tobacco rose from 28 to 42 percent. Cotton, once the most important commodity, fell from 41 percent in 1924 to 5 percent in 1957. Dairy products more than doubled in importance, and broilers rose from 1 to 7 percent in the past 15 years.

### CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

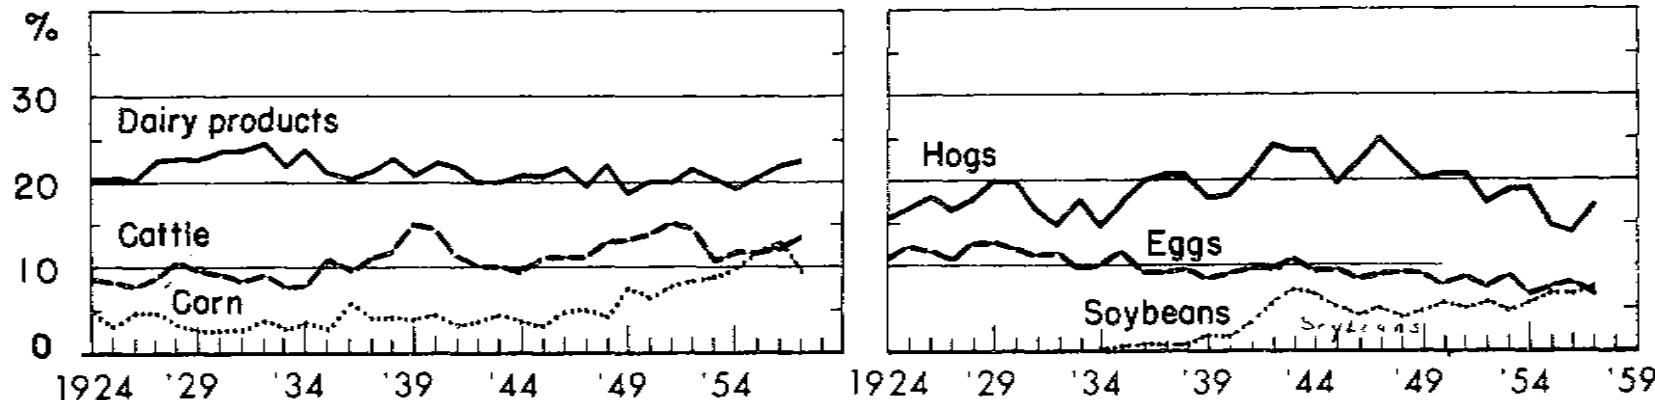

Cash receipts from crops declined from 78 percent of the total in 1924 to 65 percent in 1957. Wheat, although still first in importance, has shown a downward trend, with two decided dips during the 30's. On the other hand, cattle have shown a decided gain, with two spurts in the 30's.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

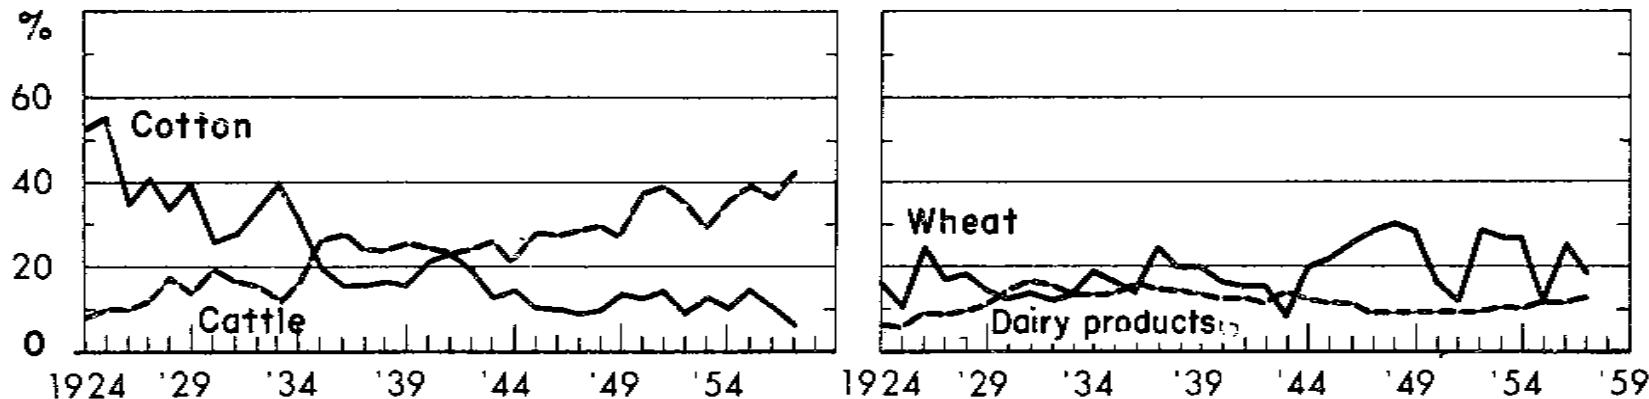

Livestock and products have accounted for about two-thirds of total cash receipts for the entire period 1924-57. Dairy products consistently contributed about one-fifth to one-fourth of the total. Hogs increased gradually until 1946, and then declined in importance. Cattle and calves, corn, and soybeans have made gains, but the share of eggs has decreased.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

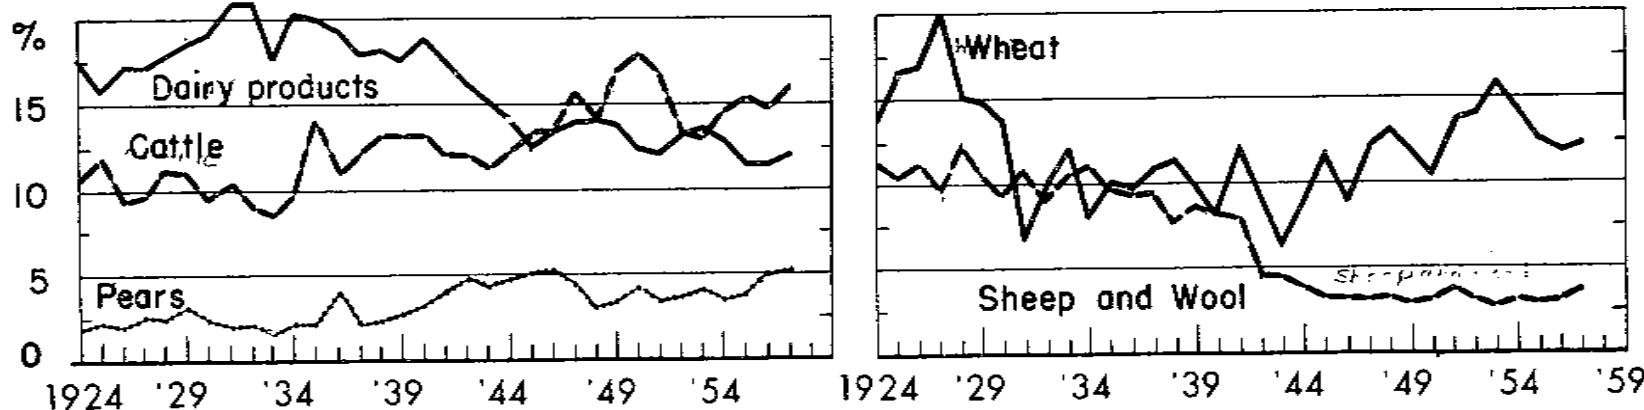

Crops have dropped from 77 percent of total cash receipts in 1924 to 34 percent in 1957. Cotton, accounting for more than half the total in 1924, dropped to only 6 percent in 1958, while cattle and calves made about the same degree of gain. Wheat and dairy products show slight upward trends, although wheat's share of the total is highly variable.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

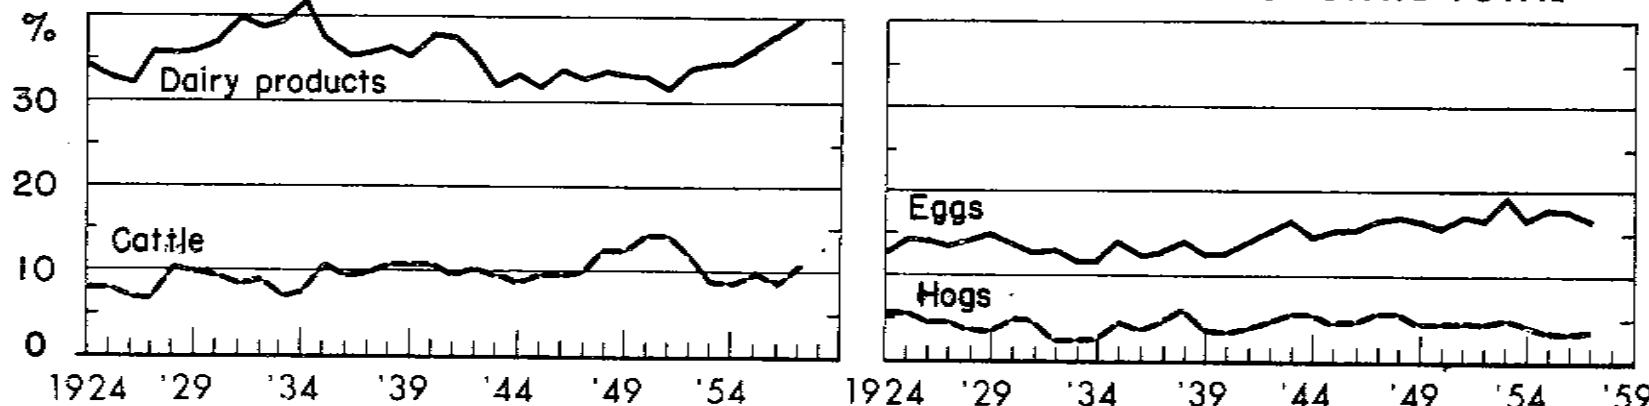

Livestock and products were more important than crops for most years through 1942, but since then crops have been consistently higher. Dairy products accounted for about 15-20 percent of total cash receipts for the first two decades following 1924, and then averaged only about 15 percent. Wheat dropped sharply in relative importance between 1927 and 1931, but for 10 years following 1943 its contribution to the total doubled. Cattle and calves and pears have increased gradually, while sheep and lambs and wool declined considerably.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

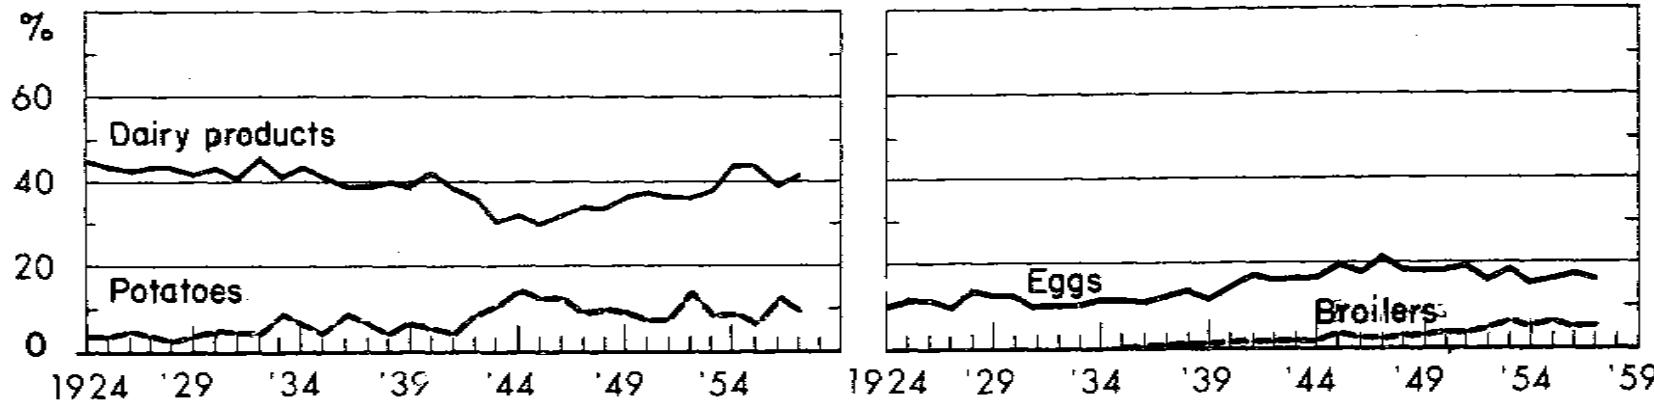

Livestock and products have accounted for about two-thirds to three-fourths of total cash receipts since 1924. Dairy products have contributed between 30 and 40 percent of the total for most years. Cattle and calves (around 10 percent) and eggs (between 10 and 20 percent) have shown a gain. Hogs remained stable, about 5 percent for most years.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

Crops dropped from 86 percent of total cash receipts in 1924 to 69 percent in 1957, reflecting a sharp decline in the contribution of cotton--from 70 to 19 percent. Tobacco, dairy products, and hogs have shown an upward trend.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

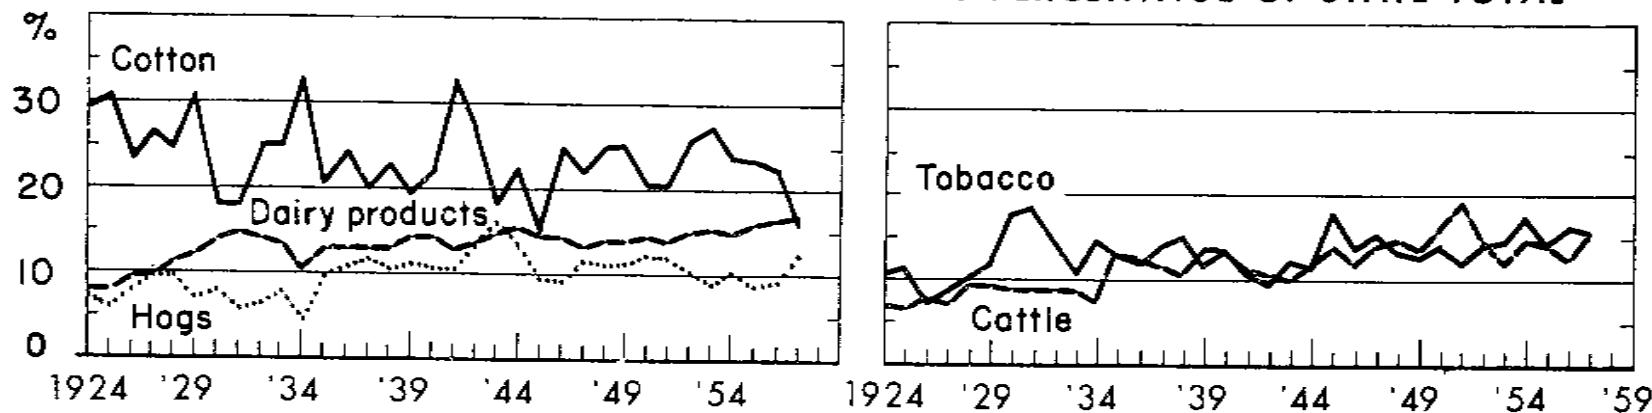

Livestock and products varied from a little more than half to nine-tenths of total cash receipts, as individual commodities showed considerable variability. On the whole, cattle and calves and corn have gained in relative importance, while hogs and dairy products declined. Wheat ranged between 5 and 15 percent for most years.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

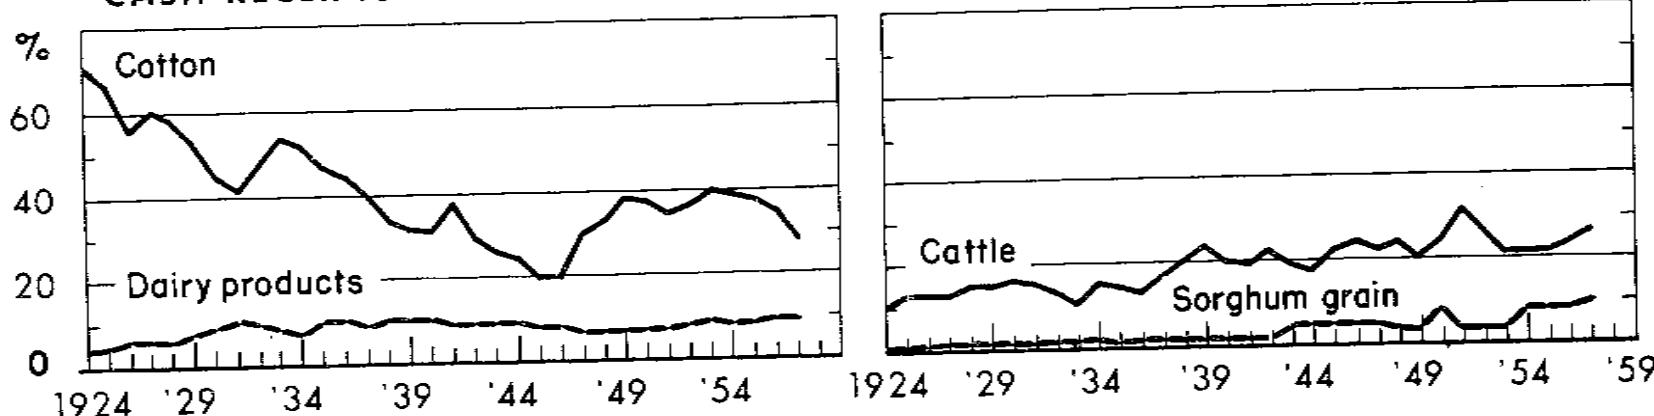

Livestock's share of total cash receipts rose from one-third to over one-half between 1924 and 1957. Cotton, with considerable variation, has shown a slight downward trend. Dairy products, hogs, tobacco, and cattle and calves have all maintained somewhat the same degree of importance, with a decided gain as a percent of the total.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

Cash receipts from livestock and products have maintained a level of about two-thirds to three-fourths of total cash receipts for most years. Sheep and lambs and wool dropped during the latter part of the period 1924-57, but this decline was offset by an increase in the contribution of cattle and calves. Dairy products and turkeys showed an upward trend.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

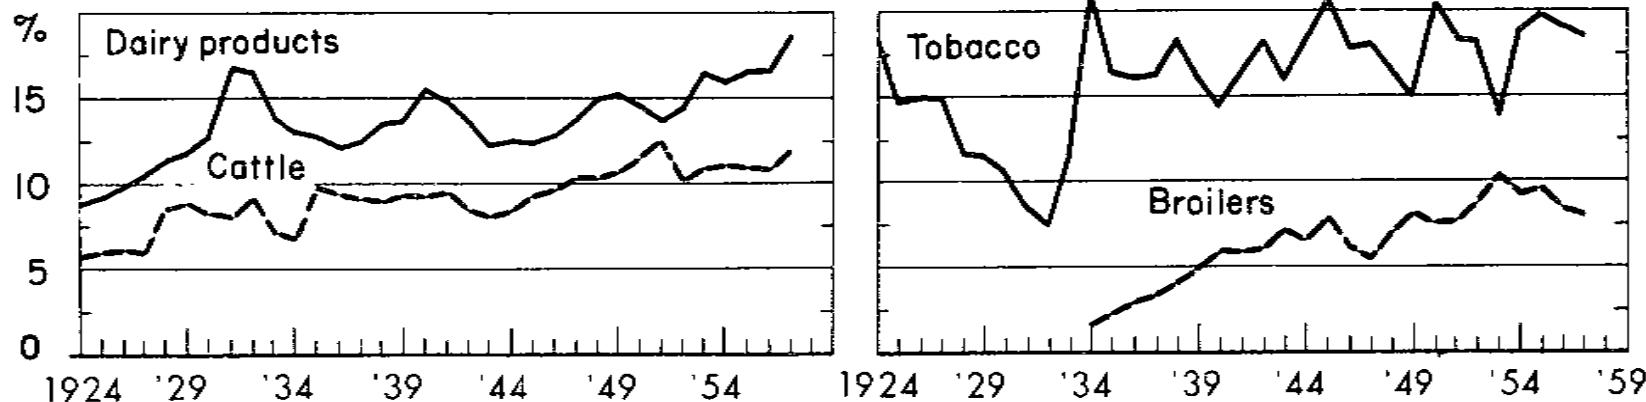

Livestock and products have accounted for between 60 and 70 percent of total cash receipts for most years. Dairy products, increasing in importance, have generally contributed between 60 and 70 percent of the total. Eggs have gained in recent years; maple products have declined; and cattle and calves have remained fairly stable, in relation to other commodities.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

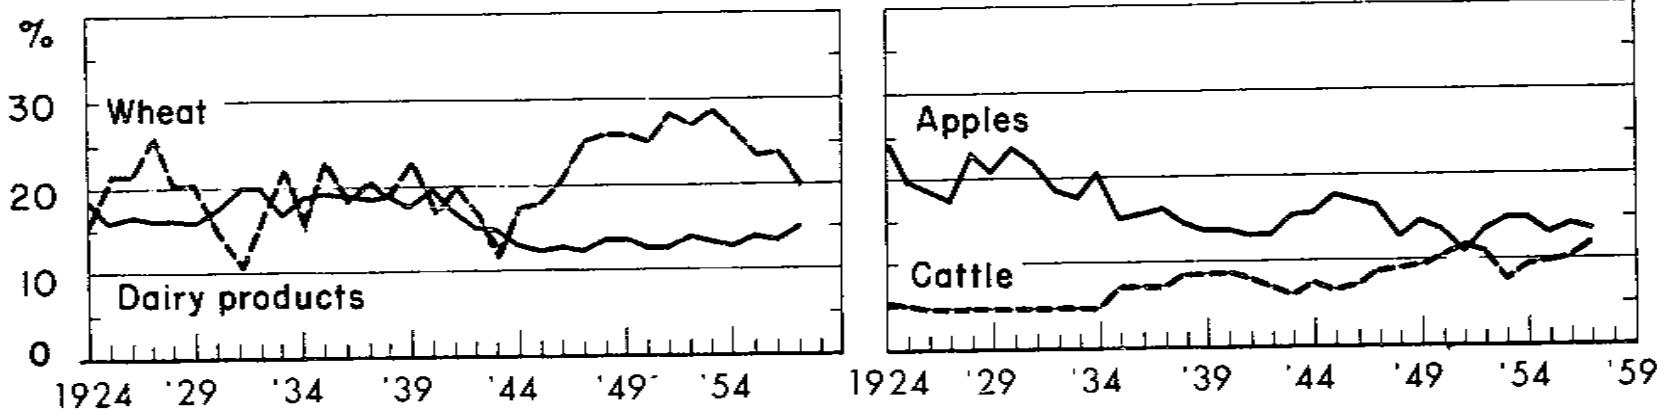

Livestock and products have increased from one-third to more than half of total cash receipts since 1924. Tobacco was the most important commodity for most years, ranging between 15 and 20 percent generally, although it dipped to 7 percent in 1932. Dairy products and cattle and calves have more than doubled in importance since 1924. Broilers made a substantial gain.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

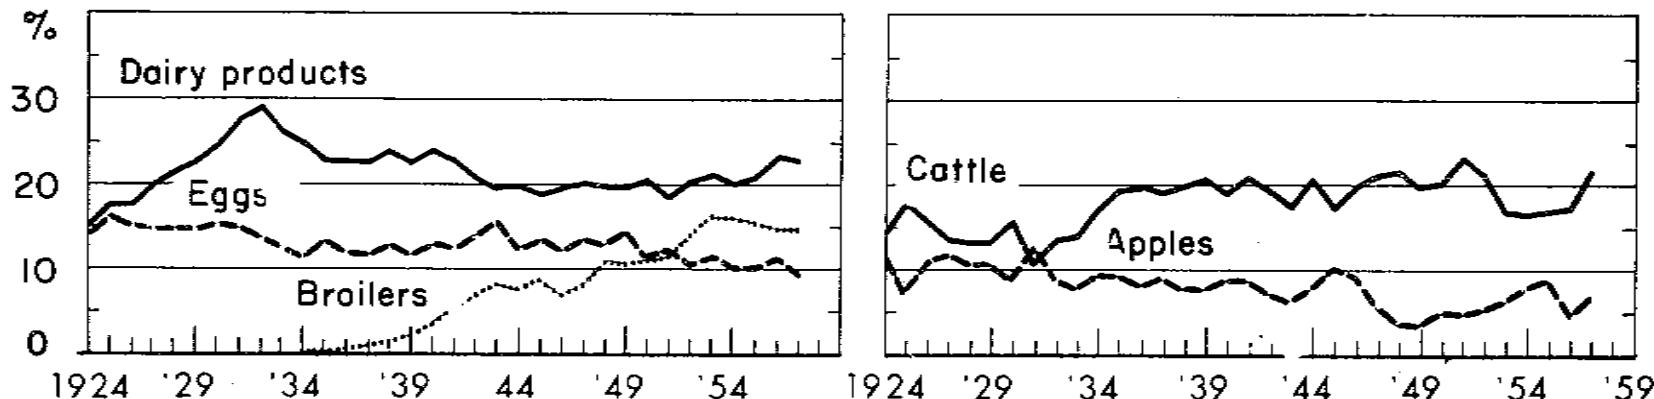

Livestock and products accounted for between 30 and 40 percent of total cash receipts for most years since 1924. At the beginning of the period, dairy products, wheat, and apples each contributed about one-fifth of the total. In recent years, wheat has risen to first place. Dairy products and apples have declined, and with a rise in the share of cattle and calves, these three commodities now approach about the same level.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

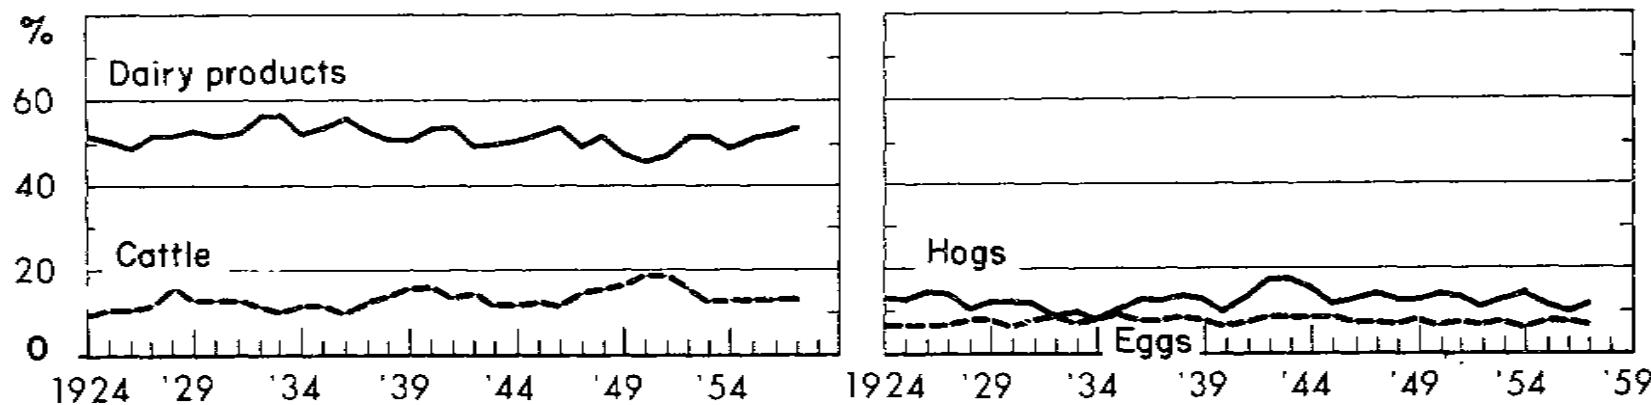

Livestock and products have risen from about three-fifths to four-fifths of total cash receipts since 1924. Dairy products rose to a peak in 1932, and then dropped to a fairly constant level around 20 percent. Broilers increased from zero in 1934 to 16 percent in 1954. Cattle and calves have gained gradually, and eggs and apples show a downward trend.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF STATE TOTAL

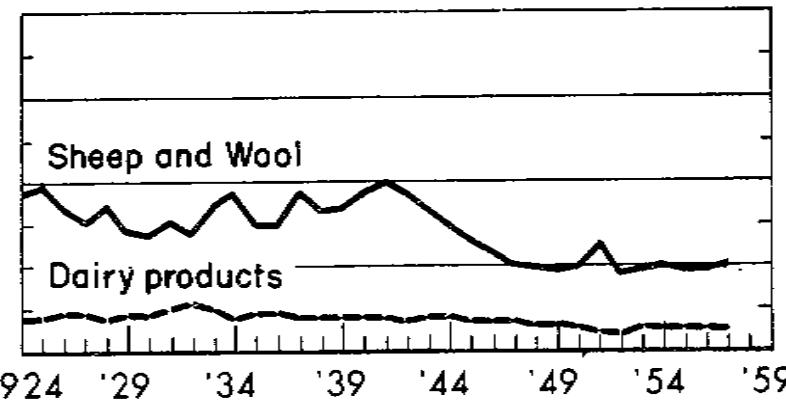

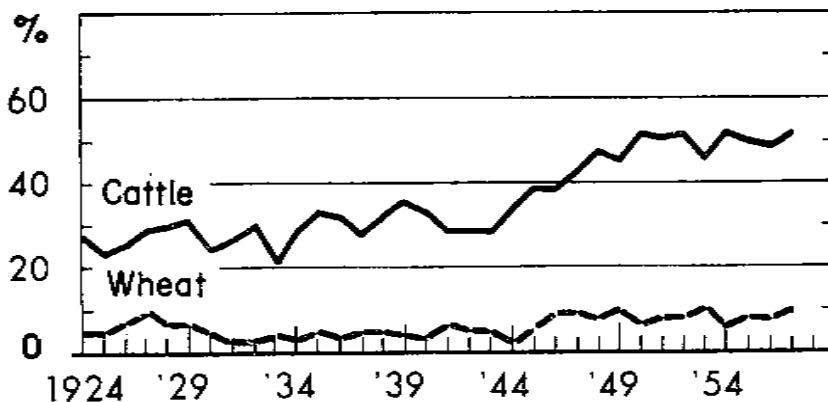

Dairy products have consistently contributed about half of total cash receipts. Cattle and calves and hogs also have remained at a stable level between 10 and 20 percent of the total, and eggs between 5 and 10 percent.

## CASH RECEIPTS FROM MAJOR PRODUCTS AS PERCENTAGE OF U.S. TOTAL

Total cash receipts have been almost equally divided between livestock and crops for most years since 1910, but the relative importance of livestock has made a slight gain. Around 1920, the five commodities shown in the chart contributed about the same share of total cash receipts, but since then they have varied widely, as cattle and calves and dairy products rose to higher levels relative to the other commodities, wheat and cotton declined, and hogs remained fairly static.

Year	Farms			Cash receipts			Percentage of all commodities
