PRICES RECEIVED BY FARMERS FOR BEEF CATTLE
United States and by States, monthly and annual average, 1909-59

This publication presents estimates of prices received by farmers for beef cattle, by States and for the United States, by months and years, 1909-59. Regional prices are shown by months and years, 1924-59. Prices, on a live weight basis, relate to all beef cattle, except calves, sold by farmers--generally at the point of first sale. Mid-month prices are based on sales the 5 days centered on the 15th. They are reviewed at the end of the year and revised, if necessary, to an estimate of the average monthly price.

These estimates represent the average price received for beef cattle on an "as sold" basis, not the price of a specific grade at a common point of sale. They are used for computing value of production and income, comparing price levels between States and price changes from month to month and from year to year, measuring price trends, and computing parity prices and index numbers of prices received by farmers.

As a result of an analysis of historical data in 1938, price estimates for most New England States were revised downward prior to the early 1930's to allow for sales of cull dairy cows, prices for a few States were interpolated for some missing months on the basis of price changes in nearby States and central markets, and prices for 1935 and 1936 in several States were revised downward into closer agreement with market data. In addition, annual average State prices (and monthly prices for some States) for 1909 were extrapolated on the basis of price changes at nearby central markets.

Beginning in January 1953 monthly State prices were estimated separately for cows and for steers and heifers. They were combined into monthly State average prices received for beef cattle on the basis of the estimated proportion of monthly sales in each category. Price estimates for cows include cull dairy cows sold for slaughter, but not dairy cows for herd replacement. A small allowance was made, where deemed necessary, for bulls sold for slaughter. Monthly and annual average prices for cows and for steers and heifers in 1953-59 are published for the first time in this report.

Through 1957 monthly prices for beef cattle by States were weighted by estimated annual marketings to compute monthly regional and U. S. average prices. Monthly prices for cows and for steers and heifers by States from 1953 were weighted by monthly sales to compute their regional and U. S. monthly prices. They were adjusted slightly through 1957, where necessary, to agree better with the published regional and U. S. average prices for beef cattle. For 1958 and 1959, monthly sales weights were used in computing regional and U. S. average monthly prices for beef cattle as well as for cows and for steers and heifers.

Annual average State prices for cows, for steers and heifers, and for beef cattle were obtained by weighting monthly prices by the estimated proportion of annual sales each month. From 1910 to 1923 weights for combining U. S. monthly prices were based on monthly receipts at public stockyards. For beef cattle since 1923, and for cows and for steers and heifers since 1952, estimated sales for each category for the calendar year were used as weights for combining annual average State prices into annual average regional and U. S. prices.

Prepared by Ronald E. Johnson, Agricultural Statistician, under the general supervision of B. S. Peterson, Head of the Prices Received Section, and B. R. Stauber, Chief, Agricultural Price Statistics Branch, Agricultural Estimates Division, AMS. Primary data were provided by the State Statisticians' offices.
