San Francisco 11, California, Rm. 737 Appraisers' Stores Bldg.  
Seattle 4, Washington, Room 222 Federal Office Building

# DAIRY AND POULTRY MARKET STATISTICS

1960

Annual Summary of Market Statistics Collected and Compiled by Dairy and Poultry Market News Offices

## PREFACE

Receipts totals shown are compiled from current information supplied voluntarily by railroads (rail) and by principal wholesalers, jobbers, chain store companies, and other first-hand receivers (truck). These figures include intermarket shipments which are not of necessity produced in the State to which origin is credited, as movement from cities with storage and storage-in-transit facilities is a factor.

Receipts totals of butter, with the exception of Portland, Oregon, do not include butter manufactured locally.

Receipts totals of cream are compiled from current information supplied voluntarily by railroads (rail) and by milk distributors and other first-hand receivers (truck).

Average prices for a month are computed by determining the arithmetic mean of the mid-points of each day's price range. An average is not computed for a month when a price is not reported for five or more consecutive trading days.

An average price for a year is the mean of the twelve month averages. Weighted averages are determined by computing volume sold by specific prices paid. An average for the year is computed only if there are average prices for all months.

<sup>1</sup> These averages are calculated by a formula designed to serve the needs of Administrators of Federal milk marketing orders. They are averages of prices at which Cheddars sold on a given date weighted by the number of cars sold. When there are no sales, the highest bid is used, if higher than the average computed for the previous week; if no sales or bids, the lowest offering price is used. When there are neither sales, bids or offers, the average of the previous week is used by Milk Market Administrators as the prevailing price for the week.
