STOCKS OF GRAINS, OILSEEDS AND HAY

Farm and Off-Farm Stocks, by States, 1954-60, Revised Estimates

Estimates of farm and off-farm stocks of corn, wheat, oats, barley, rye, flaxseed, soybeans, and sorghum grain and of farm stocks of hay have been revised in conformance with revised production estimates for the crop seasons 1954 through 1959. All stocks data are obtained on a position basis, without regard to ownership.

For the United States, stocks for each quarterly date are shown in chronological order for the farm and off-farm positions. Stocks located in off-farm storages are published under the classification of terminals, Commodity Credit Corporation and interior mills, elevators and warehouses. The category of interior mills, elevators and warehouses varies in coverage for the different commodities but covers all storages not otherwise designated for each grain or oilseed. Wheat stocks show a further separation of the amount stored at merchant mills for the period October 1, 1954 through July 1, 1957.

Terminal stocks for the period October 1, 1954 through July 1, 1960 are the commercial holdings located at 45 city points as enumerated and published weekly by the Grain Division, Agricultural Marketing Service, and relate to the week closest to the quarterly date. Beginning October 1, 1960, responsibility for reporting stocks of grain in the terminal areas was transferred to the Crop Reporting Board. At that time, the terminal category was discontinued and the storage facilities previously identified as terminals were combined with the interior mills, elevators and warehouses.

Stocks of grains owned by the Commodity Credit Corporation and stored in various positions are included in the data for the position. CCC owns additional quantities of grains held in its own bins or in storages under their control. These stocks are reported under the heading of Commodity Credit Corporation.

By States, stocks in farm and total off-farm positions are shown on a storage year basis. Wheat data by States for the period October 1, 1954 through July 1, 1957 show more detail than for other stored commodities due to the separation of stocks held at flour mills (merchant mills). Beginning with October 1, 1957, the merchant mill category was discontinued and combined with the interior mills, elevator and warehouse storage category.

The Bureau of the Census enumerates stocks of flaxseed and soybeans at processing plants and these data are incorporated with those for other positions into the combined off-farm stocks report. The Crop Reporting Board contacts these oilseed processors for data on stocks of grains not collected by the Bureau of the Census.

Quarterly and periodic estimates of farm stocks are made by the Crop Reporting Board in the form of percentages of production, that is, the quantities of each commodity on farms as a percent of the previous season's production. These percentages are converted to quantities by applying them to the appropriate estimated production.

The presentation of the stocks data is similar to the quarterly reports inasmuch as these tables are largely a reissue of the latest revised quarterly tables. When publication of stocks data for any commodity, by States, might disclose operations of an individual firm, an asterisk (*) is substituted in the table for the data. The sum of such undisclosed data and some other quantities not allocated by States is indicated at the bottom of each column as unallocated.
