SPECIAL NOTICE

This statistical report presents tables showing current and historical data on U.S. foreign trade in agricultural products. Commodity and country information is for the most recent 2-year period. Statistics for calendar year 1984 are preliminary.

U.S. foreign agricultural trade statistics in this report were derived from official data released by the Bureau of the Census. Agricultural commodities are defined as (1) nonmarine food products and (2) other products of agriculture, such as fibers, raw hides and skins, fats and oils, beer, and wine, that have not passed through complex processes of manufacture. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

Exports

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in-transit through the United States from one foreign country to another when documented as such by the U.S. Customs Bureau.

The export data in this report include "exports of domestic merchandise," defined as commodities grown, produced, or manufactured in the United States, and commodities of foreign origin that have been changed from the form in which they were imported. The export value is generally equivalent to a free-alongside-ship (f.a.s.) value at the U.S. port of export, based on the transaction price including inland transportation, insurance, and other costs. Agricultural exports have been adjusted for transshipments through Canada based on information provided by the Federal Grain Inspection Service.

Agricultural exports under specified Government-financed programs (table 15) include shipments under Public Law (P.L.) 480 programs, authorized by P.L. 83-480 as amended; and Agency for International Development (AID) programs, authorized by P.L. 82-165, 83-665, and 87-195 as amended. Commercial exports include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of extension of credit guarantees for relatively short periods repayable in dollars plus interest. Apparent excesses of exports under specified Government programs over total exports, which result in negative values in the column "Agricultural exports outside specified Government programs," may be because of lags in reporting, differences in valuation procedures, or recording the export as destined for the country through which a transshipment occurred.

In commodity-by-country data (table 16), seven-digit Schedule B commodity codes were summed to group totals. Each country listed under the commodity accounted for 2 percent or more of the commodity group's export value.

Imports

Import data consist of "imports for consumption," representing entries for immediate consumption and withdrawals from bonded warehouses. The import value is defined as the "customs value," based on the foreign market value, export value, or constructed value, and excludes import duties, freight, insurance, and other charges incurred in moving the commodity to the U.S. port.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are termed supplementary or partly competitive. All other commodities are considered complementary or noncompetitive.

In commodity-by-country data (table 21), seven-digit Tariff Schedules of the United States Annotated (TSUSA) commodity codes were summed to group totals. Countries listed under each group accounted for 2 percent or more of the commodity group's import value.
