# Digest

Ag Exports Fall Despite Increasing Supplies (see p. 2). U.S. agricultural exports slipped 14 percent to \$25.6 billion during the first 9 months of fiscal year (FY) 1985 (October 1984-June 1985). Reduced export volume (down 5 percent to 104 million tons) combined with lower prices for most commodities to cause the drop from values of the same period in 1984. Exports declined despite an improved foreign economic picture and replenished supplies of U.S. corn and soybeans.

U.S. Consumer Demand Spurs Imports (see p. 69). Rising U.S. consumer demand and a strong dollar spurred U.S. agricultural imports 8 percent over year-earlier levels to \$15.1 billion. Import values increased for most products, especially cocoa, meat, fruits and fruit juices, vegetables, wine, and malt beverages. Imports reached \$1.7 billion in June compared with \$1.3 billion in June 1984.

Dollar Rebounds in May, Declines in June (see p. 109). The U.S. dollar advanced against all five currencies most important to U.S. agricultural trade in May, immediately followed by declines in June. Interest rates and factors that are believed to affect the future course of interest rates were the most important reasons for the changing value of the dollar.

U.S. Aid Abroad Increases (see p. 113). Agricultural exports under U.S. Government-financed programs totaled \$1.5 billion in calendar year 1984, 13 percent over those of 1983. The United States shipped 7.2 million metric tons of food aid to 72 countries during the year. Government-financed programs accounted for 4 percent of all U.S. agricultural exports.

China Emerges as Significant U.S. Export Competitor (see p. 118). China became a net agricultural exporter in 1983 and 1984 rather than a net importer. In those two years, China began exporting significant quantities of corn, soybeans, soymeal, and cotton. As China's exports rose, U.S. exports fell, particularly to Asia. China's feed exports are likely to slow as its domestic livestock demand grows, but cotton sales will continue to compete with U.S. exports.

# Ag Exports Fall Despite Increasing Supplies

Lower prices and reduced export volume (down 5 percent to 104 million tons) dropped U.S. agricultural exports to \$25.6 billion during the first 9 months of fiscal year (FY) 1985 (October 1984-June 1985), 14 percent below those of the same period in 1984. Decreased wheat, soybean, and cotton shipments offset increased corn and sorghum exports. Exports dropped despite a generally improved foreign economic picture and replenished supplies of U.S. corn and soybeans. The continuing strong U.S. dollar stiffened competition with lower cost suppliers, while increased production by important customers of U.S. exports dampened and reversed import demand.

## Aid to Africa Up

U.S. agricultural exports reflected U.S. famine relief efforts in Africa. Bulgur wheat exports rose mostly because of 129,000 tons shipped to Ethiopia, and sorghum exports to Sudan went from zero to 418,000 tons. Shipments of blended food products and nonfat dried milk also rose, largely on the strength of shipments to Ethiopia and the rest of Sub-Saharan Africa. Although total U.S. wheat flour exports fell 34 percent, shipments to Sub-Saharan Africa rose 90 percent.

## Wheat Volume Declines Most

The most serious volume decline was in wheat exports, which fell 18 percent below year-earlier shipments to 22.5 million tons. Shipments to the Soviet Union dropped more than 33 percent, or 1.5 million tons. Although the Soviets have bought no U.S. wheat since March, they are expected to import over 1 million tons more this fiscal year under the terms of the U.S.-USSR Grain Agreement. The Soviets have continued purchasing wheat from other sources.

Japanese imports of U.S. wheat dipped slightly following a good crop to 2.3 million compared with 2.4 million tons a year earlier. Increased area diverted from rice to wheat and favorable weather boosted yields in Japan, the United States' third largest wheat customer.

China's purchases of U.S. wheat during the 9-month period lagged year-earlier levels by 70 percent, or over 2 million tons. High U.S. prices and low supplies of U.S. soft red winter wheat have hurt U.S. prospects in China for the remainder of this year. However, China's domestic wheat production has cut imports from all suppliers.

Wheat exports to India also fell sharply following increased domestic production. A second consecutive bumper crop led India to halt commercial imports and seek outside markets for its own surplus. Export deals totaling 750,000 tons have been struck with the Soviet Union, Romania, and certain African countries with additional deals likely. U.S. wheat exports to India through June consisted solely of P.L. 480 sales under Title II of 50,000 tons compared with over 1 million tons of commercial sales in FY 1984, and more than 2 million tons in FY 1983.

## Export Enhancement Program's Wheat Initiatives

The U.S. Export Enhancement Program initially has concentrated on wheat and products, given the sluggish performance of U.S. wheat exports so far. However, the program's initiatives are too recent to be reflected in the October-June export

figures. The first initiative was to offer 1 million tons of wheat to Algeria. The United States has since announced two more initiatives, both of which are offers to Egypt, the world's third largest market for wheat and flour. The first initiative was for 600,000 tons of flour and the second for 500,000 tons of wheat. During the first 9 months of FY 1985, U.S. wheat and flour exports to Egypt lagged 14 percent behind year-earlier shipments because of stiff competition from Australia and the European Community (EC).

#### Coarse Grain Exports Rise

Export volume for U.S. coarse grains during the first 9 months remained well ahead of the year-earlier level and is expected to remain ahead for the rest of FY 1985. Coarse grain exports rose 7 percent to 46.9 million tons. However, increased supplies lowered prices substantially and export value 9 percent.

Exports to the Soviet Union accounted for most of the increased coarse grain volume. Record-high grain sales to the Soviets are expected following the Soviet Union's sixth consecutive poor harvest last year, and coarse grain exports through June were already 8.8 million tons higher. However, exports to the Soviets in June were below previous months.

The Soviet import surge eclipsed Japan's typical position as the United States' largest coarse grain customer. In addition, Japan's imports of U.S. corn slipped 11 percent, or 1.3 million tons. Japan's total imports of coarse grains fell during the first 9 months, but the appearance of Chinese competition was a more important factor in fewer U.S. corn exports there. China's corn exports to Japan reached about 500,000 tons in the first half of FY 1985 compared with none the year before.

Chinese corn also competed with U.S. corn in Korea. U.S. coarse grain exports fell 1.4 million tons--a 60-percent decline in shipments there. Recently, mounting delays in Chinese corn deliveries have revived U.S. corn shipments to both Japan and Korea. China, nevertheless, is expected to remain a significant competitor this year.

U.S. coarse grain shipments to Western Europe dropped more than 2 million tons during the 9-month period, following a 33-million-ton jump in grain production there last year. Increased barley production and record feed wheat use squeezed imports of U.S. feed grains, and the EC will be a net exporter of coarse grains in FY 1985. Similarly, rebounding corn production in South Africa has led to a 1.7-million-ton decline in imports of U.S. corn there.

#### Grain Sorghum Exports Up

Although corn accounted for most of the increase in coarse grain shipments through June, sorghum exports were the largest since FY 1980. The largest part of the 1.5-million-ton increase went to Japan, but sorghum exports to Mexico and Venezuela were also increased; all three countries imported less U.S. corn. Total U.S. sorghum exports are expected to remain strong in the last quarter of FY 1985.

#### Soybeans Fail to Rebound

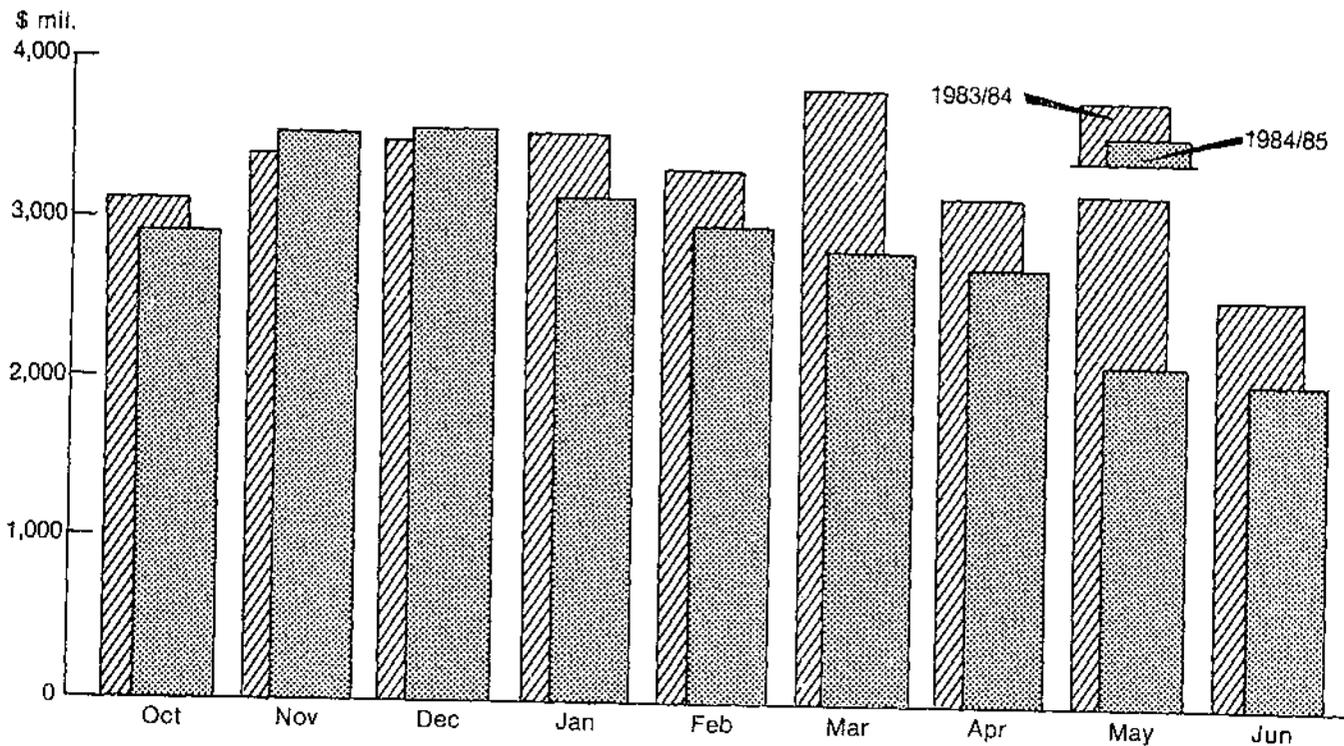

Soybean exports during the first 9 months dropped off, despite greater U.S. supplies and lower prices. Export volume fell 13 percent to 14.7 million tons. Although failing to revive trade, increased supplies lowered prices, and export value fell \$1.6 billion, or 32 percent.

October-June soybean exports in FY 1983 totaled over 20 million tons compared with this year's 14.7 million tons, and FY 1984's 16.8 million tons. In 1984, drought-reduced U.S. supplies, since replenished, stunted exports. This year, restrained demand in importing countries and record high oilseed production by Southern Hemisphere competitors has precluded any rebound.

Most of the October-June decline in soybean exports from 1984 centered on Western Europe. Factors restraining demand there included a record-high dollar, the EC's dairy reduction program, lack of opportunities for the EC to export soybean meal to the Soviet Union, and the region's record-high grain and oilseed crops. Although the dollar has fallen recently, the first half of FY 1985 saw a steady rise against European currencies, culminating in the achievement of 12-year highs in some cases.

Soybean exports to Japan dropped to 3.2 million tons versus 3.3 million tons in 1984. Japan has complained about the low quality of U.S. soybeans this year, and imports from Brazil are expected to rise. High soybean meal stocks in Japan, stemming in part from higher use of fishmeal earlier this year, restrained Japanese demand for soybeans. In addition, the Soviet Union purchased no U.S. soybeans during the first 9 months compared with 416,000 tons a year earlier.

**U.S. Agricultural Exports: Monthly Value, Oct. 1983 - June 1985**

### Cotton Shipments Fall

Cotton exports dropped 8 percent through June, despite a strong performance early in the year. Pakistan's cotton crop has rebounded this year, and foreign production is at a record high. Competition from Australia, China, and Pakistan is expected to intensify throughout the rest of the year.

Cotton exports to Japan fell despite a greater market share, but exports to Western Europe rose. Rising textile exports and increasing consumer incomes in Western Europe boosted cotton use. In addition, U.S. cotton's preferred spinning characteristics and the low export availability of Soviet cotton benefited U.S. cotton exports to Western Europe. (Stephen MacDonald, World Analysis Branch)

<sup>1/</sup> Preliminary.

<sup>2/</sup> Totals may not add.

## U.S. Consumer Demand Spurs Imports

U.S. agricultural import value totaled \$15.1 billion during the first 9 months of fiscal year (FY) 1985 (October 1984-June 1985), \$1.2 billion (8 percent) above those for the same period in FY 1984. Cocoa, meat, fruits and fruit juices, vegetables, wine, malt beverages, and live hogs contributed to the gain. Import values of other products also increased. Agricultural imports during June continued ahead of those of June 1984, reaching \$1.7 billion compared with \$1.3 billion.

The developing nations supplied 59 percent (\$8.9 billion compared with \$5.9 billion from the developed countries) of all U.S. agricultural imports. Brazil was the largest supplier of U.S. farm product imports, followed by Canada, Mexico, Indonesia, Colombia, Australia, France, Denmark, and New Zealand.

### Noncompetitive Imports Up

Noncompetitive import values during the first 9 months rose 6 percent over year-earlier levels to \$5.2 billion. Coffee imports totaled \$2.4 billion, slightly ahead of their year-earlier value. Coffee volume increased to 833,000 tons, with unit import prices increasing from \$1.31 per pound during the first 9 months of FY 1984 to \$1.32 during the same period in 1985. Brazil, Colombia, Mexico, El Salvador, Guatemala, the Ivory Coast, Indonesia, and Ecuador were major suppliers.

Cocoa imports during the first 9 months of 1985 totaled \$1 billion, a 32-percent jump over those of FY 1984, reflecting larger imports of semiprocessed cocoa and chocolate products. The volume climbed 26 percent to 428,000 tons as import unit prices gained 5 percent to \$2,350 per ton. With prospects for another large crop this year, cocoa prices are expected to average less than a dollar per pound in FY 1985. The Ivory Coast, Brazil, Ecuador, and the Dominican Republic supplied most of the U.S. cocoa imports.

Values for crude rubber and allied gums totaled \$543 million, down 16 percent from the first 9 months of FY 1984. Volume rose 3 percent to 628,000 tons. Unit import prices for rubber, however, declined 19 percent below year-earlier levels. Indonesia and Malaysia shipped most of the U.S. rubber imports.

Values for many other major noncompetitive imports also gained, especially those for bananas. In FY 1985, U.S. banana imports increased 6 percent in volume and 8 percent in value to \$560 million. Bananas are the fourth largest noncompetitive import and come mostly from Latin America.

### Competitive Values Up

Competitive imports totaled \$10 billion during the first 9 months of FY 1985, 10 percent higher than those of FY 1984. Live hogs, meats, fruits and fruit juices, vegetables, wine, malt beverages, grains, nursery stock, and cut flowers accounted for most of the value increases, and offset declines in sugar, live cattle, and coconut oil.

Beef import value advanced 13 percent to \$928 million, and volume rose 22 percent to 469,000 tons. Australia maintained its lead among major U.S. sources, followed by New Zealand and Canada. Reduced domestic pork output and the weak Canadian dollar

increased pork import value 32 percent to \$648 million. Canned pork, mainly from Denmark, and fresh pork from Canada increased sharply.

Cheese import value, at \$273 million, declined 5 percent during the first 9 months of FY 1985 from the year-earlier value, while volume, at 100,000 tons, rose slightly. Western Europe provided 76 percent of the volume.

Sugar (raw cane or beet) imports totaled \$763 million, 16 percent less than those of a year ago. The quantity of imported raw sugar fell to 1.9 million tons, reflecting a reduction in import quotas. Sugar import unit prices, averaging about \$401 per ton, were the same as the first 9 months of FY 1984. Sugar wholesale prices in the U.S. market averaged 31 cents per pound for the first 9 months of FY 1985. The Dominican Republic supplied most of the raw sugar, shipping 18 percent of U.S. import volume in FY 1985, followed by the Philippines, Brazil, Australia, Argentina, Guatemala, Peru, El Salvador, and Honduras.

Higher fruit prices and shortfalls in U.S. domestic supplies resulted from winter freezes and spring frost damage to the fruit crops of the Southeast and Northwest, and pushed total fruit imports up 52 percent during the first 9 months of FY 1985 to \$1.4 billion. Fruit juice import volumes moved 46 percent above year-earlier levels to 737 million gallons. Import demand and price increases boosted values 79 percent to \$807 million. Orange juice from Brazil, fresh grapes from Chile, and canned pineapples from the Philippines and Thailand contributed to higher fruit imports.

Imports of vegetables and preparations gained 6 percent during the first 9 months of FY 1985 to \$1.1 billion. Canned mushrooms from Taiwan and China fell short of 1984 levels by over 4,700 tons. Import volume of major fresh vegetables (tomatoes, cucumbers, onions, and peppers) from Mexico were virtually unchanged from a year ago, but prices were sharply higher.

Oilseed and product values increased 1 percent to \$601 million, due mainly to higher volume and prices for palm and palm kernel oils. Coconut oil, accounting for 44 percent of U.S. vegetable oil imports, fell 12 percent in value to \$224 million, while volume tumbled 19 percent to 273,000 tons. The Philippines, Malaysia, and Indonesia are the primary suppliers of coconut, palm, and palm kernel oils.

Imports of unmanufactured tobacco increased 2 percent in volume during the first 9 months of FY 1985 to 138,000 tons, valued at \$402 million. While oriental leaf remains a large proportion of imports, machine-threshed scrap tobacco has declined sharply in the last 2 years. Turkey, Brazil, and Greece were the major suppliers of unmanufactured tobacco.

Dutiable cattle entries in the first 9 months of FY 1985 fell sharply to 478,000 head (valued at \$205 million) from 681,000 head (valued at \$223 million) during the same period in 1984. Canada shipped 320,000 head to U.S. markets during the 9-month period compared with 245,000 head during the same months in 1984.

Live hog entries from Canada rose sharply to 1.2 million head against 697,000 head during the first 9 months of FY 1984. Lower Canadian prices and shortfalls in U.S. pork output contributed to increased hog shipments to U.S. importers.

Wine and malt beverage imports rose 6 percent in value and totaled \$1.1 billion during the first 9 months of FY 1985. Italy, France, and West Germany are the major suppliers of U.S. wine imports. (Charles E. Goode, World Analysis Branch)

## Dollar Rebounds in May, Declines in June

The U.S. dollar advanced against all five currencies most important to U.S. agricultural trade in May, immediately followed by declines in June. Interest rates and factors that affect the future course of interest rates were the most important reasons for the changing value of the dollar.

### Interest Rates Lead to Lower Dollar in June

High interest rates generally attract investors to those currencies promising the highest current or anticipated rate of return. Most individuals make such investments after allowing for present and expected rates of inflation. Interest rates on U.S. dollar-denominated financial instruments rose sharply in early May, leading to a short bull market in dollars. Since the middle of May, however, these interest rates, and the dollar, have taken a nosedive.

The Federal Reserve System has been, since the fourth quarter of 1984, expanding the amount of credit available to the banking sector for two reasons: to encourage economic expansion and to provide liquidity to a partially beleaguered banking system. Such an injection of funds lowers interest rates, which fuels more rapid economic growth. In addition, it threatens a future higher rate of inflation, especially if such expansion is maintained. There was, therefore, a double squeeze on so-called real interest rates: lower market rates accompanied by threats of more rapid price increases. The result has been a sustained erosion in the value of the dollar over 6 weeks beginning in mid-May.

The Federal Reserve has been following a policy of monetary expansion since the fall of 1984, but dollar exchange rates have now weakened. U.S. economic growth was widely perceived to be much more robust in the first quarter. Rapid expansion was expected to add to pressure on credit markets and to keep interest rates high. Second, the announced policy of the Fed was to fight inflation. The engine of easy money was therefore expected to run out of fuel. Circumstances have now changed. U.S. monetary authorities are believed to be following a course that concentrates on economic growth first (along with maintaining liquidity in the banking sector), with inflation a secondary concern. The immediate result was lower interest rates, both nominal and real. Investors responded by placing increasing orders for assets denominated in currencies other than U.S. dollars. (David Stallings, World Analysis Branch)

## U.S. Aid Abroad Increases

U.S. agricultural exports under Government-financed programs in calendar year 1984 totaled \$1.5 billion, 13 percent more than a year ago. Exports under Public Law (P.L.) 480 were valued at \$1.3 billion due to increased shipments under Title I long-term credit sales and Title II donations. Foreign donations under Section 416 were valued at \$85 million. Disbursements by the Agency for International Development (AID) were slightly lower than last year's. The United States shipped 7.2 million metric tons of food aid to 72 countries in 1984. The chief commodities were wheat, soybean oil, corn, wheat flour, and rice. The principal recipients were Egypt, Bangladesh, Pakistan, India, and El Salvador. Government-program exports again accounted for 4 percent of all U.S. agricultural exports in calendar year 1984, the same as in 1983.

Long-term credit sales under P.L. 480 Title I for 1984, valued at \$830 million, rose 8 percent in value and 22 percent in volume due to increased sales of wheat and wheat flour, which accounted for 71 percent of total credit sales. Rice, soybean oil, and corn were the other leading commodities. Over half of the total food aid was shipped through the Title I program. Egypt, Bangladesh, and Pakistan were major recipients under this program.

Title II donations, valued at \$464 million, rose 9 percent above last year's level. Donations through voluntary relief agencies accounted for 53 percent of all Title II exports; through the World Food Program, 28 percent; and through Government-to-Government shipments, 19 percent. Two million metric tons of commodities were shipped under the Title II foreign donations programs. The major commodities were: soybean oil, 24 percent; wheat, 19 percent; blended food products, 11 percent; rice, 9 percent; and corn, 8 percent.

Section 416 of the Agricultural Act of 1949, as amended, authorizes the donation of surplus dairy products through the Commodity Credit Corporation (CCC) price support operations for food assistance to needy persons overseas. During calendar year 1984, 103,000 metric tons of surplus butter, cheese, nonfat dry milk, and butter oil were shipped for distribution to 16 countries. Poland and Brazil received over half of the commodities. In 1984, the Agricultural Programs Adjustment Act amended Section 416 of the Adjustment Act of 1949 (7 U.S.C. 1413) to permit overseas donations of wheat. The law authorizes CCC to pay for packaging, processing, transportation, and other costs.

AID disbursements were \$97 million in value and 586,000 metric tons in volume. Over 90 percent of AID shipments went to Egypt during 1984. Corn remained the major commodity under this program. (Fannye G. Lockley, World Analysis Branch)

## China Emerges as Significant U.S. Export Competitor

In 1983 and 1984, China began exporting significant quantities of corn, soybeans, soymeal, and cotton, in addition to increasing its traditional exports of rice. China has thus become a net exporter rather than a net importer of agricultural products. In 1982, corn, cotton, and soybeans were still important imports (table 19); now only wheat is imported in significant quantities, and wheat imports too have fallen, dropping by more than half from 13.3 million tons in 1982 to an estimated 6 million or less in 1985.

In the next few years, China is expected to continue exporting feedstuffs, but exports are likely to slow as domestic livestock demand grows. Cotton exports, however, will continue for some time because stocks are currently so high.

Table 19--China's trade in corn, soybeans, soymeal, and cotton, calendar years 1982-85

Commodity	1982	1983	1984	1985 forecast
<u>1,000 tons</u>				
Corn: 1/				
Exports	75	60	1,480	5,000
Imports	1,840	1,568	34	100

Soymeal:				
Exports	323	683	565	600
Imports	0	0	0	0
Net exports	323	683	565	600
<u>1,000 bales</u>				
Cotton: 2/				
Exports	0	75	800	1,200
Imports	2,100	1,100	250	100
Net exports	-2,100	-1,025	550	1,100

1/ Exports may be incomplete, particularly for 1982 and 1983.

2/ Cotton data are on an August/July market-year basis ending July 31 of the year listed. Bales are 480 pounds.

As China's shipments rose, U.S. exports dropped, adversely affected in two ways. First, U.S. agricultural sales to China itself dropped because of a reduction in China's purchases of wheat, corn, cotton, and soybeans, which had been major U.S. exports to China from 1977-82. Second, China's growing exports meant increased competition with U.S. products. China's emergence as an exporter reduced U.S. exports of corn to the Soviet Union, South Korea, and Japan and soybeans to the Soviet Union, Indonesia, and Malaysia. U.S. exports of cotton to Hong Kong and some smaller Asian markets also fell because of China's rise in these markets. This competition will continue in at least the short run.

#### Surplus Production Pushed Exports Up

China's imports fell and exports rose since 1983 because of substantial growth in domestic production. Between 1978, when reform of China's agricultural policies began, and 1984, corn production rose by 31 percent, cotton by 189 percent, and soybeans by 28 percent. Total grain and oilseed output also grew dramatically.

Most of the growth was due to yield increases resulting from additional inputs and more efficient use of previously underutilized agricultural capacity. Farm households replaced teams as the main farming unit, income was tied to output by Government contracts with households, and farm purchase prices were increased. Farm income rose substantially, raising demand for both farm inputs and consumer goods. Big increases were made in private ownership of farm machinery, fertilizer use, demand for rural energy, and private investment in rural production activities.

Crop surpluses developed in many areas, so much so that stocks exceeded storage capacity despite extensive onfarm storage. The limited domestic transportation system and processing facilities were overwhelmed. Supplies of potential feedstuffs--corn, soybeans, and soymeal--soared, but expansion of feed processing failed to keep pace. Although demand for soy products remained high, particularly in nonsurplus areas, transportation was unavailable to move surpluses from the northeast to the south. Increased availability of wheat and rice allowed consumption of these grains to rise and food use of coarse grains and tubers dropped by 50 percent from 1978-83. Exporting became a viable and vital alternative and corn, soybean, soymeal, and cotton exports skyrocketed.

#### China's Corn, Soybeans, and Soymeal Displaced U.S. Exports

Two years ago, China was a net importer of corn. Imports peaked in 1979 at about 2.5 million tons and remained high, near 1 million tons or more, through 1983. In 1984, however, China's exports rose above 1 million tons for the first time and imports fell below 100,000 tons. Japan, South Korea, and the Soviet Union became China's primary export markets. Each is expected to take nearly 1 million tons or more in 1985 (table 20).

Prior to 1984, the United States was the major corn supplier for Japan and South Korea; China supplied them virtually no corn. In 1984, as China's exports began to rise, China supplied 1 percent of corn going into Japan and 15 percent to South Korea (table 21). In 1985, China is expected to displace the United States even further.

China's lower prices are largely responsible for the shift. As U.S. corn prices again fell toward China's in March 1985, U.S. sales rose and China's dropped somewhat. China's comparative advantage in delivery distance is partly offset by the higher cost of using smaller ships. But, smaller ships can also be an advantage for China because corn can be delivered directly to smaller ports nearer the end user, thereby saving on transportation costs.

Lower prices also contributed to a switch to Chinese-origin soybeans. Soybeans are a traditional export by China to other Asian nations, which use them for food products. China's annual exports in the 1950's of over 900,000 tons dropped in the 1960's to 400,000-450,000 tons. In the mid-1970's, with per capita oil availability very low, China became a net soybean importer, importing oil-rich foreign beans while continuing small exports of its own high-protein food-use beans, primarily to Japan. Recent regional surpluses pushed exports back up to 900,000 tons, nearly half of which went to the Soviet Union, probably contributing to lower U.S. sales there (table 22).

Table 20--China's corn exports, by destination, calendar years 1982-85

Destination	1982	1983	1984	1985
	forecast

1985 1/	3,515	2,000	900	57	26

1/ Forecast.

China has not substantially reduced U.S. soybean sales to Japan, its major Asian market. However, it has taken a share of the U.S. market in Indonesia and Malaysia. China's sales to Indonesia rose from none in 1982 to 13 percent (of Indonesia's total soybean imports) in 1984. At the same time, U.S. exports fell significantly from 98 to 82 percent. The switch is even more dramatic in Malaysia. China's share climbed from 3 percent in 1982 to an estimated 40 percent in 1985, while the U.S. share fell from 73 percent to an estimated 10 percent (table 23). Existing demand for food-use beans may, at least in part, explain the switch from oil-rich U.S. beans to China's higher protein beans.

Table 22--China's soybean exports, by destination, calendar years 1982-85

1985 1/	150	15	60	10	40

1/ Forecast.

For soymeal, U.S. sales have not yet been significantly disrupted, because the United States was not the primary supplier of most of China's new Asian markets. China began exporting soymeal only recently. Its exports rose from an insignificant 30,000 tons or less in 1979 and previous years to nearly 600,000 tons in each of the last 3 years. China gained a significant position in the meal market during the U.S. soybean shortage in 1983 (table 24). In that year, sales to Western Europe replaced U.S. sales. But since then, sales to Europe have fallen to a more normal share.

#### Feed Exports Likely to Slow

China is expected to continue exporting corn, soybeans, and soymeal at about current levels in the short run; but exports are not expected to increase significantly and will eventually decline. Strong competition will continue with U.S. corn exports in the Soviet Union, South Korea, and Japan and with soybean exports in the Soviet Union, Indonesia, and Malaysia.

Domestic corn and soybean production will remain high. Storage and transportation problems will likely continue despite some improvements. Before exports are reduced, there could still be more domestic switching of corn from human consumption to feed use, particularly in areas not yet experiencing corn surpluses, leaving the surplus areas to continue to export.

Although it is not clear how rapidly demand will grow, China's exportable surpluses of feedstuffs should eventually be reduced as domestic feed demand rises. Development of the livestock sector and the feed-processing industry are important Government priorities, in part in an attempt to consume some of the surpluses domestically.

Table 24—China's soymeal exports, by destination,  
calendar years 1982-85

Destination	1982	1983	1984	1985 forecast
	1,000 tons

<b>Total</b>	<b>323</b>	<b>683</b>	<b>565</b>	<b>600</b>

1/ Includes total oilcake because official Hong Kong Trade Statistics do not list soymeal separately.

### Cotton Exports May Further Disrupt U.S. Sales

With one exception, China was a net cotton importer every year up to 1983/84 when its stock position became so untenable that exports were essential. Exports rose from the historical 100,000-200,000 bales annually to an expected 1 million bales or more annually in 1984/85 and beyond (table 25).

Hong Kong became China's major cotton market. Several suppliers were replaced, including the United States. China's exports rose from a negligible share in 1982 to half the market and are still rising, while the U.S. share fell from 41 to 27 percent. Sales to other Asian markets also show considerable growth. In most cases, China's prices for lower quality cotton are below those of U.S. cotton.

Cotton stocks are now estimated at more than a year's supply and account for nearly half of total world cotton stocks. Although this year's Government cotton purchases are limited to 30 percent less than in 1984, 1985 area may exceed that necessary to produce this reduced amount and stocks may continue to rise.

Exports are expected to continue for some time and may rise further, expanding the number of markets where China competes with the United States. While China would like to export even larger amounts of cotton annually in order to draw stocks down more rapidly, it will be limited by the current world market surplus and by the generally low quality of its own large stocks. (Carolyn L. Whitton, Asia Branch)

Table 25--China's cotton exports, by destination 1/

# Reports

from USDA's Economic Research Service

*Dynamics of Comparative Advantage and the Resistance to Free Trade*, by Thomas Vollrath. FAER-214. August 1985. \$1.00. SN: 001-019-00396-1.

The income gap between developed and developing countries could narrow if developing countries' economies become more responsive to market forces. Primary manufacturing has become the fastest growing component of many developing countries' export growth. The author cites 26 developing countries which have built industries to produce and export basic manufactures, such as clothing, footwear, furniture, electrical machinery, and nonmetal mineral manufacturing. The United States has an interest in developing countries' economic growth because it can provide much of their rapidly growing food import needs.

*Developmental Consequences of Unrestricted Trade*, by Thomas Vollrath. FAER-213. May 1985. \$1.00. SN: 001-019-00391-0.

International trade, unencumbered by protectionism, stimulates economic growth in both developed and developing countries. This study, which examines the fundamental economic forces that determine how trade affects development and growth, shows that undistorted trade becomes a catalyst to economic growth by unleashing market forces which promote development.

*Financial Constraints to Trade and Growth: The World Debt Crisis and Its Aftermath*, by Mathew D. Shane and David Stallings. FAER-211. December 1984. \$2.00. SN: 001-019-00381-2.

The debt problems of developing countries will severely limit their ability to purchase goods in the world market for at least the next 5 years. Resolution of these debt problems could increase potential U.S. agricultural exports by as much as 20 percent. The large debts of the developing countries became serious problems with the shifts to tighter monetary policies by the developed countries in the late seventies and consequent slowing of inflation and credit flows. Eighteen countries which are major markets for U.S. agriculture hold more than 60 percent of the problem debt. Both current debts and national economic policies in the developing countries must be restructured to begin the strengthening of those countries' economies. Developed countries can help the economic recovery of developing nations by providing markets for their export commodities.

*Foreign Exchange Constraints to Trade and Development*, by Philip C. Abbott. FAER-209. November 1984. \$2.25. SN: 001-019-00340-5.

Many developing countries, facing huge trade deficits and shortages of foreign exchange, reduced their agricultural imports over the past few years from the United States and other countries. Unless cash-short developing countries increase their exports and obtain food and financial aid, their agricultural imports will grow much more slowly in the next decade than in the last. While many developing countries face long-term problems, others appear to be in short-term liquidity crises; if their export growth resumes, so will their agricultural imports. China, Brazil, Mexico, Nigeria, and India are key to world cereal trade. Those projections are based on a two-gap model applied to 31 developing countries.

## How to order . . .

To cover costs of special handling of international mail, a surcharge of 25 percent must be added on all items shipped to a foreign address. Remittance in U.S. dollars must accompany every order and be in the form of a check drawn on a bank located in the United States or Canada, a UNESCO coupon, or an International Postal Money Order made payable to Superintendent of Documents. Or use your MasterCard, VISA, or prepaid Superintendent of Documents deposit account. Mail your order to Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, USA. For airmail service, please contact Superintendent of Documents by letter, telephone (202/783-3238), or Telex (710-822-9413; ANSWERBACK USGPO WSH) for the total cost of your order.
