16. Abstract (Limit: 200 words)			
<p>Rising foreign production, falling prices, and shrinking volume pushed down U.S. agricultural exports 17 percent in value during the first 11 months of fiscal year (FY) 1985 (October 1984-August 1985) to \$29.3 billion from \$35.1 billion a year earlier. Unfavorable weather conditions and higher prices for fruits, fruit juices, and vegetable oils boosted U.S. agricultural imports to \$18.1 billion during the first 11 months of FY 1985, 5 percent above those of the same period in 1984. The U.S. dollar fell against all five currencies (German mark, Japanese yen, British pound, Dutch guilder, Canadian dollar) most important to U.S. agricultural trade during July. U.S. agricultural exports benefit both the farm and non-farm sectors by generating employment, income, and purchasing power. U.S. agricultural sales to Latin America may fall to \$4.7 billion in FY 1985 and to \$4.6 billion in 1986 from \$5.3 billion in 1984, depending on the region's weather and Mexico's buying activity.</p>

Prepared by the International Economic Indicators Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators were C. Edward Overton, Thomas A. Warden, and Thomasine B. McCall. Mary L. Fant provided statistical support. Donna Pyles provided word processing and table formatting support. Editorial support was provided by Linda L. Hatcher, Research Information Branch, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economic Systems Branch, Data Services Center, and Penni Korb, International Economic Indicators Branch.

Digest

U.S. Farm Exports Fall as Production Rises Overseas (see p.2). Rising foreign production, falling prices, and shrinking volume pushed down U.S. agricultural exports 17 percent in value during the first 11 months of fiscal year (FY) 1985 (October 1984-August 1985) to \$29.3 billion from \$35.1 billion a year earlier. Strong increases in overseas production of wheat, coarse grains, and soybeans outstripped modest gains in consumption. Lower soybean and coarse grain prices depressed export values for those commodities 16 percent and 15 percent, respectively. Agricultural export volume fell 10 percent to 119 million metric tons, led by an 8.5-million-ton decline in wheat exports and a 3-million-ton drop in soybean exports.

Farm Imports Rise (see p. 67). Unfavorable weather conditions and higher prices for fruits, fruit juices, and vegetable oils boosted U.S. agricultural imports to \$18.1 billion during the first 11 months of FY 1985, 5 percent above those of the same period in 1984. A January freeze in Florida and a spring frost in the Northwest spurred fruit imports 4 percent and vegetable imports 5 percent.

Dollar Slide Firms in August, Falls in September (see p. 108). The U.S. dollar fell against all five currencies (German mark, Japanese yen, British pound, Dutch guilder, Canadian dollar) most important to U.S. agricultural trade during July. It recovered in August until a September policy announcement by the five major industrial countries (United States, United Kingdom, Germany, France, and Japan) pushed the U.S. dollar down sharply.

U.S. Trade Benefits Economy (see p. 112). U.S. agricultural exports benefit both the farm and nonfarm sectors by generating employment, income, and purchasing power. Each dollar received from farm product exports in calendar year 1984 stimulated another \$1.35 (or an additional \$51 billion) in supporting activity to produce the exports. An estimated 1.1 million full-time civilian jobs were related to agricultural exports, including 629,000 jobs in the nonfarm sector.

U.S. Farm Exports to Latin America To Fall in 1985 and 1986 (see p. 116). U.S. agricultural sales to Latin America may fall to \$4.7 billion in FY 1985 and to \$4.6 billion in 1986 from \$5.3 billion in 1984, depending on the region's weather and Mexico's buying activity. U.S. farm export values to Latin America remain about \$5 billion a year but may decline because U.S. grain and oilseed prices are depressed, crop yields in Latin America are slightly above average, and recent price-cutting tactics of U.S. competitors have partially displaced some U.S. grain and oilseed sales.

U.S. Farm Exports Fall As Production Rises Overseas

Falling prices and shrinking volume pushed down U.S. agricultural exports 17 percent during the first 11 months of fiscal year (FY) 1985 (October 1984-August 1985) to \$29.3 billion compared with \$35.1 billion a year earlier. Volume fell 10 percent to 119 million metric tons, led by an 8.5-million-ton decline in wheat exports and a 3-million-ton drop in soybean exports. Strong Soviet purchases raised coarse grain volume 1 percent higher, but sharply lower prices offset the increase, lowering coarse grain export values nearly 15 percent.

U.S. agricultural exports fell in 1985 as strong increases in foreign agricultural production outstripped modest gains in consumption. Even countries enjoying the largest increases in gross national product (GNP) (Japan and the other East Asian countries) did not match their GNP growth with large increases in consumption. Elsewhere, weaker economic growth coincided with burgeoning agricultural production. In Western Europe, unemployment worsened in 1985, while 1984's massive grain crop made the European Community (EC) a net exporter of coarse grains for the first time. Similarly, Eastern Europe will also be a net grain exporter, and India's burdensome wheat stocks have led that country to seek export outlets rather than imports. In addition, traditional competitors increased their exports in 1985, often at the expense of U.S. market shares, as cash-strapped customers increased their emphasis on lower prices.

U.S. Wheat Squeezed from World Market

U.S. wheat exports declined nearly 25 percent in volume during the 11-month period, and export value fell more than \$1.5 billion to \$4 billion. World wheat trade is expected to drop sharply during the latter half of FY 1985, compounding the effect of a declining U.S. world market share. Australian wheat exports will probably reach a record high in 1985, and Argentina's grain exports (mostly wheat) moved at a record pace earlier in the year. At the same time, importers' production reduced and even reversed their need for imported wheat. U.S. wheat exports to India fell 1 million tons in FY 1985, as that country's burdensome stocks led it to seek export markets. Similarly, wheat shipments to China dropped nearly 3 million tons (a 71-percent decline), as burgeoning production cut China's import needs by half. Indonesia's self-sufficiency in rice production led, in part, to a 536,000-ton decline in U.S. wheat shipments.

U.S. wheat shipments to the Soviet Union dropped more than 2.7 million tons as the Soviets concentrated their U.S. purchases on corn and bought more wheat elsewhere. The Middle East imported some 840,000 tons less U.S. wheat through August, and shipments are expected to continue to lose ground as competition cuts U.S. wheat exports to the region from FY 1984's record high. A large portion of the U.S. credit guarantees offered to Turkey and Iraq went unused as these countries opted to avoid debt and turned to other suppliers. Sales to North Africa fell about 1 million tons, or 18 percent, as a tight credit situation in Morocco shifted wheat purchases to France under official financing. The U.S. Blended Export Credit program was expected to help sustain sales to Morocco, but the program foundered early in the year in the controversy over cargo preference.

Only in Brazil did U.S. wheat shipments significantly increase following a poor crop there last year. Shipments rose 31 percent, making Brazil the third largest customer after the USSR and Japan.

Soybean Exports Continue To Fall

U.S. soybean exports during the first 11 months dropped 16 percent to 15.8 million tons. Soybean prices also fell significantly, and U.S. soybean export value declined \$1.9 billion. FY 1985's decline followed an even larger decline in FY 1984, from 23 million tons to 18.7 million tons.

For the second year, most of the decline in volume can be attributed to smaller sales to Western Europe. Western Europe, the largest U.S. soybean customer, accounts for about one half of all U.S. soybean exports. However, shipments to the region during the first 11 months of FY 1985 dropped 40 percent from those of 2 years earlier. Sales to the rest of the world fell only 15 percent in the same period.

The U.S. dollar rose to a 12-year high against some European currencies during the first half of FY 1985, a much stronger rise than against the yen. Subsequently, U.S. soybean exports to Japan fell only 7 percent compared with 16 percent to Western Europe even though protein meal consumption for 1985 stagnated in both Japan and Europe. Western Europe increased its imports from Brazil and Argentina following record-high South American crops, and U.S. shipments to Western Europe fell to 7.4 million tons from 8.9 million tons a year earlier.

FY 1985's soybean exports to Mexico also dropped, a decline that was previously masked by multiple counting of some rail shipments. Following a 705,000-ton and \$177-million revision, U.S. soybean exports to Mexico through August stood 245,000 tons below year-earlier shipments.

Coarse Grain Exports Ahead in 1985

U.S. coarse grain exports remained ahead of FY 1984's level through August but only by a rapidly declining margin. At 52.3 million tons, coarse grain export volume exceeded 1984's tonnage by 1 percent as substantially increased, but slowing, shipments to the USSR were largely offset by decreased shipments to Western Europe, Japan, Mexico, South Africa, and Korea.

Increased foreign production accounted for most of the lower demand for U.S. coarse grains in FY 1985. Worldwide grain production rose 18 percent, but international grain trade rose only 2 percent. In Western Europe alone, grain production rose 36 million tons, making the EC a net exporter of coarse grains for the first time and leading to a 1.8-million-ton decline in U.S. shipments to the region. Coarse grain exports to South Africa also fell 1.8 million tons as rebounding production reduced what had been record-high import needs, and Mexico's increase in coarse grain production helped reduce its U.S. corn purchases 45 percent.

Despite Japan's strong economic growth, livestock production and feedstuff import demand there increased only modestly. Total coarse grain imports stagnated, and U.S. shipments fell to 12.5 million tons from 14.3 million in 1984. China's transformation into a significant exporter of corn in East Asia has cut the U.S. market share in Japan and Korea in FY 1985. U.S. coarse grain exports to Korea fell 53 percent, or 1.6 million tons, below those of a year earlier, as China replaced the United States as Korea's main source of imported corn.

Soviet Needs Boost U.S. Exports

U.S. coarse grain exports to the USSR rose from 6.3 million tons to 14.9 million tons as the sixth consecutive poor harvest in the Soviet Union pushed import needs there to an all-time high. However, U.S. coarse grain exports to the Soviets have slowed in the past months, falling from 2 million tons in April to 140,000 tons in June and disappearing altogether in August. The Soviet grain harvest now underway appears improved from 1984's by perhaps 10 percent, and Soviet livestock numbers declined in 1985, for the first time since 1980 in the case of cattle. In addition, the current overload in the world meat and dairy markets add incentive to import these finished products instead of producing them with imported grain.

Sorghum Exports Higher

Although shipments to the Soviet Union were much higher this year, all of this increase was in corn exports and was matched by lower corn exports elsewhere. U.S. sorghum exports, however, rose 23 percent as increased food aid to Sub-Saharan Africa (particularly to Sudan) added to increased shipments to Japan and Venezuela. Sorghum shipments to Japan slowed as the corn/sorghum price ratio eased, but exports remained 770,000 tons higher at the end of August. Shipments to Venezuela increased 700,000 tons, offsetting a slight decline in exports to Mexico this year, from 2.6 million tons to 2.2 million tons. Mexico's imports of U.S. sorghum have been revised downwards since the last issue of Foreign Agricultural Trade of the United States (FATUS), following the discovery of rail shipment double counting. (Stephen MacDonald, International Economic Indicators Branch)

Farm Imports Rise

Higher prices, unfavorable weather conditions, and strong demand boosted U.S. agricultural imports to \$18.1 billion during the first 11 months of fiscal year (FY) 1985 (October 1984-August 1985), \$800 million (5 percent) above those for the same period of FY 1984. Both competitive and noncompetitive commodities, mainly cocoa products, fruit juices, fruits, vegetables, beef, pork, live hogs, spices, tea, palm oil, grains, wine, and malt beverages, contributed to value increases. Ample supplies, however, reduced imports of coffee, raw sugar, natural rubber, tobacco, live cattle, cheese, and coconut oil. Farm imports during August declined from those of 1984, reaching \$1.5 billion compared with \$1.6 billion in August 1984, and declined 21 percent from the \$1.9 billion imported in March 1985.

Agricultural products from developing countries, accounting for 59 percent of all U.S. farm imports, grew 3 percent to \$10.6 billion compared with \$7.1 billion from developed countries. Brazil continued to be the single largest source of U.S. farm imports, followed by Canada, Mexico, Australia, Indonesia, Colombia, France, New Zealand, Denmark, and the Netherlands.

Competitive Values Climb Despite Declines

Competitive imports advanced 6 percent above year-earlier levels to \$11.9 billion during the first 11 months of FY 1985, despite value decreases for sugar, tobacco, live cattle, coconut oil, and cheese.

Beef and Pork Values Up. Lower domestic red meat supplies raised U.S. beef imports to \$1.2 billion during the 11-month period, up 9 percent from the previous year. Volume gained 22 percent to 607,000 tons. Australia supplied 40 percent of U.S. beef imports, followed by New Zealand, and Canada. Higher import volumes elevated the value of pork by 22 percent to \$778 million. Canned pork, mainly from Denmark, and fresh or frozen pork from Canada rose substantially.

Live Cattle Down; Live Hogs Up. Live cattle entries declined to 544,000 head (\$232 million) during the first 11 months from 773,000 head (\$270 million) in the same period of FY 1984. Nearly 350,000 head of Canadian cattle entered the United States during the 11-month span, 9 percent more than the year-earlier entries. Most of the decline resulted from reduced shipments from Mexico. Live hog entries from Canada rose sharply to over 1.4 million head compared with 955,000 head in the same period of FY 1984. Fewer U.S. hog marketings contributed to the sharp increases in Canadian hog shipments to U.S. processing plants.

Cheese and Tobacco Values Down. Cheese imports, accounting for over 52 percent of U.S. dairy product imports during the first 11 months of FY 1985, were valued at \$329 million, a decrease of 8 percent from 1984's value, with declines from Western Europe and New Zealand. However, casein imports from New Zealand and Ireland grew. Weaker demand for unmanufactured tobacco imports held growth in volume to 1 percent during the 11-month period, totaling 176,000 tons valued at \$513 million. Turkey, Brazil, Greece, and Yugoslavia were the major suppliers. While oriental leaf remains a large proportion of U.S. imports, machine-threshed scrap tobacco has become less important in the last 2 years.

Fruits, Fruit Juices, and Vegetable Values Surge. Fruit imports during the first 11 months rose 42 percent above year-earlier values to \$1.7 billion. Concentrated orange juice from Brazil, apple juice from Argentina, fresh grapes from Chile, and canned pineapples from the Philippines and Thailand spurred the increases. The January freeze in Florida and spring frost in portions of the Northwest spurred fruit imports 143,000 tons ahead of the 1.1 million tons imported a year earlier. Increased demand and higher prices boosted fruit values 24 percent to \$753 million. Fruit juice volume jumped 35 percent above year-earlier levels to 859 million gallons valued at \$930 million. Unit import prices for fruit juice rose 18 percent, while those for fruit averaged increases of 10 percent.

The freeze reduced fresh vegetable supplies in Florida, the principal domestic supplier of fresh winter vegetables, and caused imports of vegetables and preparations to rise 8 percent to \$1.3 billion. Import volume, however, gained only 2 percent to 2 million tons, with most fresh vegetables from Mexico increasing. Fresh tomatoes, cucumbers, onions, peppers, squash, and eggplant are the principal vegetables imported from Mexico. Canned mushrooms from Taiwan and China declined.

Vegetable Oil Values Up. Vegetable oil imports increased during the first 11 months of FY 1985, except for those of coconut oil. Volume rose 10 percent to 771,000 tons with a value of \$617 million. Vegetable oils (mainly coconut and palm oils) accounted for most imports of oilseeds and products. Because of larger domestic soybean supplies, coconut oil imports declined 9 percent in value to \$278 million and volume dropped 7 percent to 360,000 tons. The Philippines supplied the bulk of the coconut oil.

Raw Sugar Values Plunge. Raw sugar imports diminished in value to \$830 million, while volume tumbled 22 percent to 2.1 million tons. Larger supplies pushed down import unit prices of raw sugar to \$390 a ton in the first 11 months of FY 1985 compared with \$402 a ton a year earlier. Larger domestic production, larger stocks, higher duties, fewer re-exports, and the U.S. import quota effectively reduced sugar imports and contributed to a decline in sugar prices. The Dominican Republic supplied most of the raw sugar, shipping 20 percent of U.S. import volume, trailed by Brazil, the Philippines, Australia, Argentina, Guatemala, Colombia, Peru, El Salvador, Honduras, and Costa Rica.

Other competitive imports increased in value through the first 11 months, including wine, malt beverages, grains, feeds, hides and skins, cashew nuts, nursery stock, and cut flowers. Wine and malt beverage imports rose 2 percent to \$1.4 billion. Italy, France, and West Germany were the major suppliers of wine, with the Netherlands, West Germany, and Canada providing beers.

Noncompetitive Values Increase

Noncompetitive imports inched up 2 percent during the 11 months of FY 1985 to \$6.2 billion, despite lower values for coffee and natural rubber. Increases in cocoa products, bananas, tea, and spices accounted for the value gains.

Coffee Down; Cocoa Product Values Jump. Coffee imports totaled \$2.9 billion during the 11-month period, down \$101 million from year-earlier values. Coffee import volume was unchanged at 1 million tons; average unit import prices remained almost unchanged at \$1.32 a pound between October 1984 and August 1985. Average monthly wholesale prices for Brazilian coffee in the U.S. market tumbled from \$1.40 a pound in October 1984 to \$1.33 a pound in August 1985, due to larger supplies. Brazil, Colombia, Mexico, El Salvador, Indonesia, Guatemala, the Ivory Coast, Ecuador, Uganda, and Peru were major suppliers.

Imports of cocoa beans and products, ranking second among noncompetitive imports, rose 27 percent in value during the first 11 months to \$1.2 billion and 23 percent in volume over year-earlier levels. Chocolate preparations and cocoa beans led the increases. Increased domestic consumption of cocoa products pushed imports of cocoa butter, powder, and chocolate above year-earlier levels. The New York cocoa futures price averaged just under \$1 a pound during the 11-month period. The Ivory Coast, Brazil, Ecuador, the Dominican Republic, the Netherlands, and Ghana supplied most of the U.S. cocoa imports.

Natural Rubber Values Down; Bananas Up. Declining prices reduced U.S. import values of natural rubber by 19 percent during the first 11 months to \$632 million. Volume was almost unchanged at 736,000 tons as unit import prices dropped 19 percent below those of a year earlier. Indonesia and Malaysia shipped most of the U.S. rubber imports.

Increased banana shipments from Ecuador moved U.S. banana imports during the first 11 months up 8 percent above year-earlier volumes to 2.7 million tons. Higher unit import prices increased value to \$681 million. Banana imports from Honduras and Panama increased sharply, while imports from Costa Rica and Colombia declined. (Charles E. Goode, International Economic Indicators Branch)

U.S. Agricultural Imports: Value, Fiscal Years 1978-85

Billion dollars

Dollar Slide Firms in August, Falls in September

The U.S. dollar fell against all five currencies (German mark, Japanese yen, British pound, Dutch guilder, Canadian dollar) most important to U.S. agricultural trade during July. It recovered in August until a September policy announcement by the five major industrial countries (United States, United Kingdom, Germany, France, and Japan) pushed the U.S. dollar down sharply. Strong U.S. economic growth signaled an end to the decline in U.S. interest rates.

Stronger U.S. Growth, Lower Dollar Policy

Credit provided to the banking sector since the end of 1984 led to lower interest rates and a U.S. dollar decline starting in mid-May. The dollar decline accelerated during the early summer due to lower U.S. interest rates and recovered in August due to stronger U.S. economic growth in the third quarter.

The dollar fell sharply, however, following the September announcement that the five major industrial countries (G-5), including the United States, agreed to cooperate in lowering the dollar on foreign exchange markets. The announcement made by treasury and finance ministers from the G-5 initially sparked massive sales of U.S. dollars, although lasting effects are less certain.

Improved U.S. car sales in August, followed by lower unemployment figures and stronger growth in U.S. gross national product (GNP) during the third quarter, caused investors to seek U.S. assets in anticipation of possibly rising U.S. interest rates. This demand for the dollar stopped the steep dollar decline of June and July and staged a partial recovery back to levels prevailing in June.

The dollar recovery gained momentum during September--until the G-5 announcement--as further economic indicators on U.S. production, prices, credit, sales, and GNP growth showed more robust economic activity compared with the lackluster second quarter of 1985. Stronger U.S. economic growth and its increased demand for U.S. dollars will conflict with the announced policy to lower the U.S. dollar through concerted government intervention.

The Federal Reserve voiced concern earlier in the summer about the recent increases in the money supply (M1) and possible inflationary effects when coupled with expected strong third-quarter growth. Higher U.S. interest rates triggered by strong growth may await further Federal Reserve evaluation of the strength of the economy, although higher interest rates would work against the lower dollar policy.

Traders and investors who still believe strong U.S. economic growth is a reason to buy U.S. dollars will have to contend with the Government's policy to reduce dollar demand. If government intervention becomes less effective than at present, the dollar may regain the losses sustained during the early summer. U.S. exports, therefore, are not likely to benefit from a widespread lower exchange rate until traders are convinced that the lower exchange rate policy matches U.S. economic strength, which may not occur until later in 1986. (Edward C. Wilson, International Aggregate Analysis Branch)

U.S. Trade Benefits Economy

U.S. agricultural exports peaked in calendar year 1981 at \$43.3 billion after years of steady growth and declined 15 percent to \$37.8 billion in 1984. Farm exports are vital to the economic health of not only U.S. farmers but of many U.S. industries and of the Nation as a whole. Today, production from more than a third of our cropland moves into export channels. In fiscal year (FY) 1985 (October 1984-September 1985), the United States expects to export 56 percent of its wheat, about 38 percent of its soybeans, over 25 percent of its corn, and 49 percent of its cotton.

Farm product exports benefit both the farm and nonfarm sectors by generating employment, income, and purchasing power. For example, farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export necessitate additional economic activity in the manufacturing, trade, and transportation sectors.

Exports Generate Added Business Activity

The United States exported \$37.8 billion worth of agricultural products in 1984. The farm value of the exported raw products was \$21.1 billion, the processed commodities were valued at \$10.6 billion, and transportation and trade services for raw and processed products added another \$6.1 billion.

Total business activity of an estimated \$88.9 billion was required to produce the exported commodities themselves plus supporting goods and services. Thus, each dollar received from agricultural exports stimulated another \$1.35 of output in the U.S. economy, a multiplier effect of more than 2.

Therefore, supporting activity required to produce the agricultural goods and services exported in 1984 generated an additional \$51 billion worth of output: \$8.2 billion from the farm sector, \$3.6 billion from the food processing sector, \$18 billion from other manufacturing sectors, \$5.9 billion from trade and transportation, and \$14.9 billion from other services. Around 84 percent of the additional economic activity accrued to nonfarm sectors of the economy.

Jobs For A Million Workers

An estimated 1.1 million full-time civilian jobs were related to U.S. agricultural exports in 1984. Of this total, a little more than 500,000 U.S. farmworkers, 16 percent of the farm labor force, were employed in the production of export commodities.

In addition, 629,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 60,000 of these were in food processing, 246,000 in trade and transportation, 120,000 in other manufacturing sectors, and 203,000 in other services.

Bulk Exports Dominate

Bulk agricultural exports (grains, oilseeds, and cotton) accounted for \$23.1 billion, or over 60 percent, of the \$37.8 billion in agricultural exports in 1984. Bulk exports, however, have a smaller proportional effect on the nonfarm economy. The \$23.1 billion of direct bulk exports generated an additional \$26.2 billion of

business activity (\$1.13 additional output per dollar of bulk exports versus the \$1.35 for all agricultural exports). And this additional activity was distributed differently across economic sectors (farming, 5 percent; manufacturing, 44 percent; other services, 39 percent; and wholesale trade and transportation, 12 percent) than the business activity for all agricultural exports (farming, 16 percent; manufacturing, 42 percent; other services, 30 percent; and wholesale trade and transportation, 12 percent). Of the 1.1 million jobs related to U.S. agricultural exports, 680,000, or 62 percent, were jobs supporting bulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. balance of trade increased substantially during the 1970's. Net exports of U.S. farm products (exports minus imports) rose from about \$1 billion in 1969 to nearly \$27 billion in calendar year 1981. Net agricultural exports partly offset a \$129-billion deficit in nonfarm trade in 1984, leaving the U.S. balance of trade in deficit by \$111 billion.

The Impact of Agricultural Imports on U.S. Output

The United States imported about \$19.3 billion worth of agricultural commodities in 1984. Some \$6.7 billion of this total was spent on complementary items (such as bananas, coffee, and tea) that did not compete directly with U.S. agriculture. The rest, \$12.6 billion, was spent on imports of competitive items (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that did compete with U.S. products.

Complementary imports have been growing at an annual rate of about 8 percent since 1970, while competitive imports have been growing at a rate of about 9 percent. Only competitive imports were included in the input-output analysis of imports' effect on the economy.

Within the food processing sector, the subsectors for meat products, beverages and flavoring, sugar refining, and food freezing, canning, and drying accounted for around three-fourths of the value of imports in 1984. But, although the producer's value (value at processing plant) of exported meat products offset the \$2.1-billion producer's value of imported meat products, the United States imported over \$1 billion worth of sugar and exported none, and imported \$1.5 billion worth of frozen, canned, and dried goods and exported \$0.8 billion worth.

Using the input-output model, the equivalent domestic effect of the \$12.6 billion worth of competitive imports in 1984 is estimated at around \$33 billion. That is, for each dollar spent on imports, roughly another \$1.62 in supporting goods and services would have been needed if those imported items had been produced domestically, an output multiplier of about 2.62.

The multiplier effect of U.S. agricultural imports is larger than that for U.S. exports because of the relatively greater amount of processed or partly processed foods in the import product mix.

Agricultural Trade Benefits U.S. Economy

The direct balance of U.S. farm trade in 1984 was around \$18 billion: \$37.8 billion in exports minus \$12.6 billion in competitive imports and \$6.7 in complementary

agricultural imports. However, the additional business activity needed to produce the supporting goods and services for exports, together with the output lost by importing competitive farm products, reveals a different picture. The 1984 net trade balance for agriculture was an estimated \$50 billion: \$88.9 billion of total output generated by farm exports less \$39.4 billion (including complementary imports) of agricultural imports.

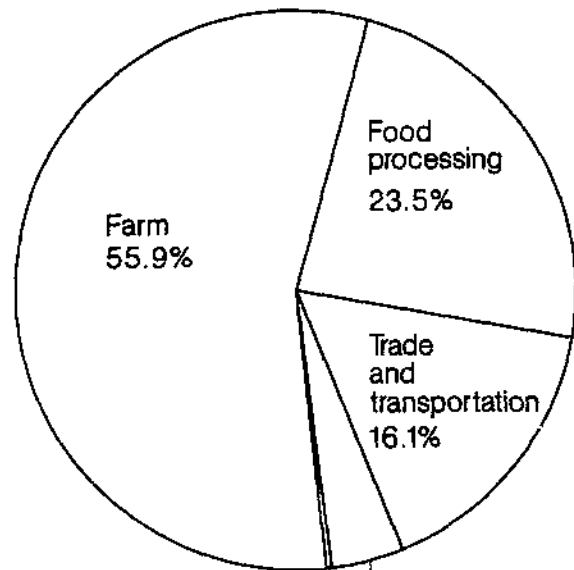

U.S. agricultural trade has a positive effect on most sectors of the economy. The farm sector's \$29.4 billion worth of output associated with agricultural exports more than offset the \$7.6 billion of farm output implicitly lost because of competitive agricultural imports.

Similarly, the U.S. economy outside of farming and food processing accrued a direct net benefit of \$7.8 billion from agricultural trade and a net increase in output of \$32.5 billion after considering the domestic output foregone from competitive agricultural imports.

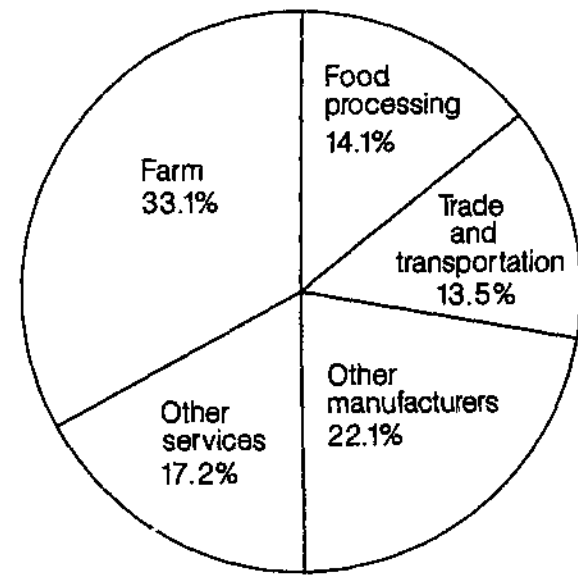

The food processing sector is the sole exception to this pattern of large net benefits from agricultural trade. In 1984, the food processing industry had a \$1.1-billion surplus in direct trade and gained \$1.9 billion in total output. And, the industry gained about 300 jobs but lost about \$11 billion in income.

Agricultural trade benefited the processing of meat, grains, fats and oils, and miscellaneous foods. Whereas, agricultural trade did not benefit dairy plants; sugar mills; canners, freezers, and dehydrators; beverage and flavoring makers; and confectioners and bakers.

While Direct Effects of Agricultural Exports Favor the Farm Sector...

...The Total Income Generated Is Widely Shared

Farm Sector Receives Much of Income Benefit

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in 1984 generated nearly \$2.35 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes. ^{1/} Thus, the \$37.9 billion of agricultural exports generated \$88.9 billion of total economic activity but only \$37.9 billion worth of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The share of total income attributed to agricultural exports and competitive imports going to the nonfarm, nonfood processing part of the economy in 1984 was similar, nearly half in each case. The distribution of the remainder within the farm and food processing sectors differed markedly. The farm sector received 39 percent of the total income stream from agricultural exports, while the food processing sector received 6 percent, reflecting the importance of raw agricultural commodities in the export bill of goods.

The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food processing sectors, with each getting about a fourth, reflecting the relatively greater importance of processed food products in the competitive import bill of goods. (Gerald Schluter and William Edmondson, Aggregate Analysis and Macroeconomics Branch, Agriculture and Rural Economics Division).

^{1/} This is the income directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers are able to purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. As a result, more purchasing power is spread throughout the total economy. In addition, the heightened activity, trade, and transportation stimulated by agricultural exports can boost investment in plants and equipment. Because input-output analysis does not count this additional income, our estimates of the economywide influences of agricultural trade are conservative.

U.S. Farm Exports to Latin America To Fall in 1985 and 1986

The value of U.S. farm product sales to Latin America was projected in fall 1984 to drop about \$0.6 billion to \$4.7 billion in fiscal year (FY) 1985 (October 1984-September 1985). Stronger than expected sales to Mexico during the first 6 months of FY 1985 suggested that the total would approach \$4.9 billion. But sharply diminished activity among Mexican buyers in U.S. markets during the summer and the discovery of large double counting errors in reporting U.S. corn, sorghum, and soybean shipments to Mexico during the December-June period forced down the FY 1985 estimate to both Mexico and Latin America. ^{1/} The final estimate for 1985, as of August 1985, is \$4.7-\$4.8 billion for Latin America, representing a decline of 10-12 percent from FY 1984's nearly \$5.3 billion.

Latin America remains a \$5-billion-a-year market for U.S. agricultural products, but sales in FY 1986 are expected to fall \$100 million from those of 1985 because (1) U.S. grain and oilseed prices are depressed, (2) crop yields in Latin America have been slightly above average for several months, and (3) recent price-cutting tactics of Argentine grain and oilseed exporters and Brazilian oilseed exporters have partially displaced U.S. grain and oilseed sales. Continuing strong sales of a wide variety of agricultural commodities to Mexico in the third quarter of 1985 offset sagging sales elsewhere in the Hemisphere. But if price competition continues, U.S. agricultural exports to the region may decline another 2-3 percent, unless widespread crop failures occur during the next 6-9 months.

What are the prospects for poor grain and food harvests in Latin America during the first 6 months of FY 1986? To date, crop estimates for most South American countries have been favorable. But erratic weather patterns have returned to several countries in the Caribbean Basin. Recent reports from the Dominican Republic, Haiti, Cuba, Nicaragua, and Costa Rica suggest that yields of current plantings of rice, corn, and sugarcane may fall as much as 10-20 percent when harvests are completed. The Dominican Republic, which has not imported rice in the past 2 years, has already indicated that it may need 30,000-50,000 metric tons of U.S. rice to carry it through until the April/June harvest begins.

Similarly, excessively wet weather appears to have diminished spring and summer yields along the southern shores of the Caribbean. Another recent report from Ecuador suggests that exceptionally dry conditions may be returning to some of the Pacific coastal grain areas of northwestern South America. At this time, answers to three questions are unknown: (1) Have a significant number of crop areas in Latin

^{1/} The May/June 1985 issue of Foreign Agricultural Trade of the United States (FATUS) contains some statistical errors for soybean and sorghum shipments to Mexico during the December 1984-April 1985 period. These reporting errors resulted in the publication of inflated soybean and sorghum exports to Mexico, Latin America, and the world, which have been corrected in this and subsequent issues of the publication. The published figures for U.S. exports of soybeans and sorghum in the May/June issue should be reduced by 705,620 tons and \$177 million for soybeans, and 440,669 tons and \$56.8 million for sorghum, under cumulative October/April totals for 1984/85. For example, the 1984/85 Mexican figure for soybeans of 1,639,473 tons on p. 52 should be reduced by 705,620 tons to read as 933,853 tons. Similarly, the "Latin America" and "World" totals need to be corrected accordingly.

America actually experienced adverse weather conditions in recent weeks? (2) If so, will this translate into greater than expected demand for U.S. grains, oilseeds, and related products in the next 6-9 months? (3) Will major exporting countries, such as Argentina, Brazil, and Canada, be able to capture a larger share of an already tight Latin American market? By December 30, 1985, most of the current grain crops will be harvested in both North and South America and the ability of other countries to compete with U.S. exporters during the first 6 months of 1986 should be known.

Mexico To Remain the Dominant Market in Latin America

Mexico will be the pivotal market for U.S. sales in Latin America in 1986. U.S. sales to Mexico are expected to decline in 1986 to about \$1.6 billion, the lowest level since 1982. Mexico, however, was a surprisingly strong market for a wide variety of U.S. farm products in 1985 for reasons that are not clear. Mexico will buy more U.S. livestock products than initially expected in FY 1985, but purchases are expected to decline by \$50 million in 1986. Purchases of U.S. feed grains are expected to decline in 1986 to less than 4 million metric tons. Mexico will buy an estimated 1.2 million metric tons of U.S. soybeans in 1986, which should be close to 1985's figure.

U.S. Sales to the Caribbean/Central American Region To Rise Slightly

Requests for increased P.L. 480 aid and significant weather problems in recent months in the Caribbean/Central American region suggest that demand in FY 1986 for U.S. wheat, corn, rice, oilseed products, and other foods will exceed that for 1985. If the United States can maintain its market share in this region, U.S. farm product sales should increase from \$1.1 billion in 1985 to \$1.2 billion in 1986.

U.S. Sales to the Andean Region Continue To Slide

Austerity measures, continuing drives for self-sufficiency in basic grains, and strong competition from other grain exporters, such as Argentina, have cut U.S. sales to the Andean region from about \$2 billion annually in 1981 to an estimated \$1.2-\$1.4 billion in FY 1986. Prospects for any significant increases in FY 1986 are slim, but major crop failures in any of these countries could create additional demand for U.S. wheat, vegetable oils, and perhaps feed grains. However, the Andean region is buying about 2.6 million tons of U.S. wheat, which accounts for 50-70 percent of annual U.S. farm exports to the region. Venezuela has also become a primary market for U.S. corn, sorghum, and oilseed products.

Brazilian Wheat Imports To Decline

U.S. wheat continues to account for 75-80 percent of the Brazilian market. A poor 1984 harvest in Brazil is expected to boost U.S. wheat sales to 2.8 million tons in 1985, up from 2.3 million tons in 1984. This level should drop to an estimated 2.1 million tons in 1986.

Competitive Position of Argentina Appears Mixed

The outlook for spring crops in Argentina (September-December) looks favorable. The 1986 harvest of feed grains and oilseeds is forecast to rise slightly over that of 1984 or 1985. Argentina's current wheat crop (harvested October-December 1984) is projected to fall as much as 25 percent from the previous year, so U.S. wheat exporters may find selling U.S. wheat in Latin America easier in FY 1986. However, Argentina is still trying to recapture the Latin wheat market it lost when it sold large quantities of wheat to the USSR a few years ago.

Latin America's Major Commodities To Decline Slightly

The 1986 forecast for U.S. farm product sales to Latin America follows: wheat and wheat products down perhaps 5 percent; coarse grain tonnage down; livestock products down; oilseed and oilseed products unchanged; rice, fruits and vegetables, and other products up. But, the degree of uncertainty remains high for the 1986 estimates because of the uncertainty for Southern Hemisphere summer and fall harvests.

P.L. 480 Aid Rises in 1985; May Decline in 1986

P.L. 480 Title I and Title III sales to Latin America may reach \$241 million in FY 1985, a substantial increase over the FY 1984 total. Latin America is currently budgeted to receive \$216 million in 1986. Decreases in P.L. 480 sales to the Dominican Republic, Jamaica, and Peru, in particular, could reduce total U.S. agricultural exports to those countries. P.L. 480 aid, however, accounts for only a small proportion of agricultural sales to the region, but it is very important to several countries, including Bolivia, where 80 percent of its imports of U.S. agricultural products are financed under P.L. 480 programs. In recent years, P.L. 480 programs have also financed 30-50 percent of U.S. agricultural export sales to El Salvador, Honduras, Costa Rica, and the Dominican Republic. (Dick Brown, Western Hemisphere Branch)

Reports

From USDA's Economic Research Service

Dynamics of Comparative Advantage and the Resistance to Free Trade, by Thomas Vollrath. FAER-214. August 1985. \$1.00. SN: 001-019-00396-1.

The income gap between developed and developing countries could narrow if developing countries' economies become more responsive to market forces. Primary manufacturing has become the fastest growing component of many developing countries' export growth. The author cites 26 developing countries which have built industries to produce and export basic manufactures, such as clothing, footwear, furniture, electrical machinery, and nonmetal mineral manufacturing. The United States has an interest in developing countries' economic growth because it can provide much of their rapidly growing food import needs.

Developmental Consequences of Unrestricted Trade, by Thomas Vollrath. FAER-213. May 1985. \$1.00. SN: 001-019-00391-0.

International trade, unencumbered by protectionism, stimulates economic growth in both developed and developing countries. This study, which examines the fundamental economic forces that determine how trade affects development and growth, shows that undistorted trade becomes a catalyst to economic growth by unleashing market forces which promote development.

Financial Constraints to Trade and Growth: The World Debt Crisis and Its Aftermath, by Mathew D. Shane and David Stallings. FAER-211. December 1984. \$2.00. SN: 001-019-00381-2.

The debt problems of developing countries will severely limit their ability to purchase goods in the world market for at least the next 5 years. Resolution of these debt problems could increase potential U.S. agricultural exports by as much as 20 percent. The large debts of the developing countries became serious problems with the shifts to tighter monetary policies by the developed countries in the late seventies and consequent slowing of inflation and credit flows. Eighteen countries which are major markets for U.S. agriculture hold more than 60 percent of the problem debt. Both current debts and national economic policies in the developing countries must be restructured to begin the strengthening of those countries' economies. Developed countries can help the economic recovery of developing nations by providing markets for their export commodities.

Foreign Exchange Constraints to Trade and Development, by Philip C. Abbott. FAER-209. November 1984. \$2.25. SN: 001-019-00340-5.

Many developing countries, facing huge trade deficits and shortages of foreign exchange, reduced their agricultural imports over the past few years from the United States and other countries. Unless cash-short developing countries increase their exports and obtain food and financial aid, their agricultural imports will grow much more slowly in the next decade than in the last. While many developing countries face long-term problems, others appear to be in short-term liquidity crises; if their export growth resumes, so will their agricultural imports. China, Brazil, Mexico, Nigeria, and India are key to world cereal trade. Those projections are based on a two-gap model applied to 31 developing countries.

How to order . . .

To cover costs of special handling of international mail, a surcharge of 25 percent must be added on all items shipped to a foreign address. Remittance in U.S. dollars must accompany every order and be in the form of a check drawn on a bank located in the United States or Canada, a UNESCO coupon, or an International Postal Money Order made payable to Superintendent of Documents. Or use your MasterCard, VISA, or prepaid Superintendent of Documents deposit account. Mail your order to Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, USA. For airmail service, please contact Superintendent of Documents by letter, telephone (202/783-3238), or Telex (710-822-9413; ANSWERBACK USGPO WSH) for the total cost of your order.
