DAIRY MARKET STATISTICS

1986

Annual Summary of Market Statistics Collected and Computed by the Dairy and Poultry Market News Branch

PREFACE

An average price is computed by dividing the sum of the mid-points of price ranges reported during the period by the number of price ranges during the period.

A weighted average price is computed by dividing the total value of the sales during the period by the total number of units sold during the period.

An average price for a year is the mean of the twelve monthly averages.

A monthly average price is not computed when a price is not reported for five or more consecutive trading days.

A yearly average price is not computed when an average price is not reported for one or more months.
