16. Abstract (Limit: 200 words)

The value of fiscal year (FY) 1985 farm exports declined 18 percent, as larger world supplies reduced prices and U.S. export volumes. Increased demand, unfavorable weather, and higher prices in the Unted States boosted the value of U.S. agricultural imports to a record high of $19.7 billion in FY 1985, up $820 million from 1984's level. Bumper grain and soybean crops worldwide will continue depressing prices in FY 1986. The high value of the dollar and large stocks, rising production levels, and weak economic growth in the EC reduced U.S. agricultural exports to the EC in FY 1985 to $5.3 billion from 1984's $6.7 billion and 1980's record high $10.3 billion. An excess supply of ships for carrying dry bulk commodities kept ocean freight rates low in 1984, despite growth in demand for dry bulk ships.

IMPORTANT INFORMATION ABOUT YOUR SUBSCRIPTION

Foreign Agricultural Trade of the United States is published six times a year with two supplements. Subscription prices are $26 a year domestic and $32.50 foreign (prices subject to change). Send check or money order payable to "Superintendent of Documents" to Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. For faster service, call (202) 783-3238 and charge your subscription to your VISA, MasterCard, Choice, or GPO Deposit Account.

IS IT TIME TO RENEW?

Your subscription to this publication may be due to expire soon. If so, you will get a renewal notice in the mail from GPO about 90 days ahead of time. Only one notice is sent. You must return it promptly to ensure uninterrupted service. If you have misplaced your renewal notice, use the form on the back of this report. Be sure to attach mailing label.

Prepared by the International Economic Indicators Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators were C. Edward Overton, Thomas A. Warden, and Thomasine B. McCall. Mary L. Fant provided statistical support. Donna Pyles provided word processing and table formatting support. Editorial support was provided by Linda L. Hatcher, Research Information Branch, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economic Systems Branch, Data Services Center, and Penni Korb, International Economic Indicators Branch.

Digest

Increased Supplies Dampen U.S. Farm Exports (see p. 2). The value of fiscal year (FY) 1985 farm exports declined 18 percent, as larger world supplies reduced prices and U.S. export volumes. October 1984 to September 1985 exports totaled $31.2 billion compared with $38 billion for FY 1984. Rising foreign production boosted world supplies and reduced prices for wheat, coarse grains, and soybeans. U.S. export volume dropped 12 percent to 126 million metric tons, led by a decline of 13.2 million tons in wheat exports and 3 million tons in soybean exports.

U.S. Farm Imports Reach Record High (see p. 69). Increased demand, unfavorable weather, and higher prices in the United States boosted the value of U.S. agricultural imports to a record high of $19.7 billion in FY 1985, up $820 million from 1984's level. Consumer demand continued to gain for such items as fruit juices, fruits, and vegetables. However, winter freezes in Florida and a spring frost in the Northwest dampened production and increased U.S. prices of those commodities.

Farm Commodity Prices To Continue Depressed (see p. 111). Bumper grain and soybean crops worldwide will continue depressing prices in FY 1986. Increased production among several major importers will reduce export demand prospects, although continued U.S. economic growth and higher livestock prices may lead to greater domestic feed use.

U.S. Farm Exports to EC Continue Falling (see p. 116). The high value of the dollar and large stocks, rising production levels, and weak economic growth in the EC reduced U.S. agricultural exports to the EC in FY 1985 to $5.3 billion from 1984's $6.7 billion and 1980's record high $10.3 billion. U.S. farm exports to the EC as a proportion of total farm exports fell from 25.5 percent in 1980 to 17.1 percent in 1985. U.S. exports to the EC are unlikely to improve in FY 1986 because of a continuation of these trends.

Ocean Freight Rates Remained Weak in 1984 (see p. 120). An excess supply of ships for carrying dry bulk commodities kept ocean freight rates low in 1984, despite growth in demand for dry bulk ships. Continued delivery of newly built dry bulk ships, fewer laid up and idle dry bulk ships, and more combination carriers operating in the dry bulk market caused the excess supply of ships.

Increased Supplies Dampen U.S. Farm Exports

The value of U.S. agricultural exports fell 18 percent in fiscal year (FY) 1985 (October 1984-September 1985) as both lower prices and lower export volume took their toll. Export value fell nearly $7 billion to $31.2 billion, while volume dropped a record 17.9 million tons to about 126 million tons. Rising world production boosted foreign supplies and reduced prices for wheat, coarse grains, and soybeans. It also led to a smaller U.S. export share in world markets. These problems and the resulting declines in exports will continue to plague U.S. agriculture in 1986.

The negative influences facing U.S. farm product exports are similar to those faced by other primary commodity exporters, such as the nations of the Organization of Petroleum Exporting Countries (OPEC). Years of real price increases and export growth have now been followed by movements in the opposite direction. Sluggish world economic growth, excess global production, and substitution in importing countries with alternate products and local production have combined to weaken prices and dim commodity export prospects.

The largest decline in export volume for any U.S. farm commodity in FY 1985 was 13.2 million tons in wheat, a 32-percent drop from 1984's 41.7 million tons. During FY 1985, world wheat consumption began to decline instead of growing as in years past. While consumption fell, wheat production by importing countries continued to rise, and global wheat trade has suffered. The impact on U.S. exports was exacerbated by its slipping world market share.

Soviet Timing Influences Wheat Exports

The largest drop in wheat shipments in FY 1985 was 4.7 million tons as purchases by the USSR fell from 7.6 million tons to 2.9 million, virtually a mirror-image of the rise in tonnage a year earlier. U.S. wheat sales to the USSR increased dramatically in the latter part of FY 1984, and nearly 3 million tons were shipped to the Soviets in August and September 1984. If late 1984's high corn prices had not led the Soviets to purchase wheat exclusively, some of the late-1984 shipments would have occurred in FY 1985 and the difference between the 2 years would have been less pronounced.

Soviet purchasing subsequently switched to corn, and imports of U.S. wheat finished the year 1.1 million tons below the 4 million tons specified in the U.S.-USSR Grain Agreement.

In 1985, Japan regained its position as the largest U.S. wheat customer, despite a 200,000-ton slip in purchases from 1984's 3.4 million tons. The USSR dropped to second place, and Brazil rose to third. A poor harvest led Brazil to accept U.S. credit guarantees and spurred U.S. wheat sales to that country 560,000 tons, helping to offset a 625,000-ton drop in U.S. exports to Chile, where harvests improved, and a 260,000-ton cut in exports to Peru.

Better harvests led China to reduce its U.S. wheat imports 3.2 million tons in 1985. China's climb to become the world's largest wheat producer enabled it to cut imports in half and to let the last of its long-term grain purchase agreements lapse. Burgeoning food grain production also cut import needs in India and Indonesia and

reduced their imports of U.S. wheat 1 million tons and 600,000 tons, respectively. Wheat exports to the European Community (EC) fell 250,000 tons as production and quality rose there.

Although exports to many other destinations fell as local production rose, Sub-Saharan Africa was an exception on both accounts. Severe food production shortfalls stemming from drought and civil strife led to unprecedented relief efforts, and U.S. wheat exports to the region reached a record 2.5 million tons, increasing 450,000 tons from the year before. Although Nigeria took one third of the export increase, the next largest increase was 85,000 tons to Sudan, one of the most severely affected countries. Wheat shipments also increased dramatically to Ethiopia, Kenya, Somalia, Mozambique, Mali, Zaire, Zambia, and Zimbabwe.

Competition Cuts U.S. Sales

In contrast to southern Africa, U.S. wheat sales to North Africa in FY 1985 fell 2 million tons, or more than 40 percent. Competitors there, as in the Middle East, have supplanted the United States by offering lower prices.

U.S. wheat sales to the Middle East fell 1.3 million tons, a 41-percent decline, despite extensive U.S. credit guarantees. The Middle East is Australia's largest market, and Australia's lower prices and willingness to barter has increased its attractiveness compared with the United States. Although Iraq was the fastest growing U.S. export market in 1984, wheat shipments fell 40 percent to 589,000 tons in 1985 and shipments to Turkey fell 400,000 tons. Both countries allowed large quantities of U.S. credit guarantees to go unused.

Export Credit Guarantees Lower

Bolstering the United States' competitive position through credit guarantees met with mixed success in 1985, as slipping wheat sales to Turkey and Iraq demonstrate. The value of U.S. farm products exported with credit guarantees fell to an estimated $2.5 billion compared with $3.6 billion in 1984. The share of all agricultural exports under credit guarantees declined slightly to 8 percent. Customers often avoided increased debt and pursued concessions on price instead, frequently turning to U.S. competitors. Increased assistance to Sub-Saharan Africa spurred shipments under the Food for Peace Program, Public Law (P.L.) 480, to about $1.6 billion.

More Coarse Grains to USSR Offsets Decline

U.S. coarse grain exports fell slightly to 54.9 million tons as an 8.4-million-ton increase in shipments to the USSR did not quite offset fewer exports to most other destinations. World coarse grain production rebounded to a record high in FY 1985, and global non-Soviet imports of U.S. coarse grain fell over 8 percent. The USSR, however, had record-high import needs for grain in 1985. Increased world supplies reduced 1985's prices from those of 1984, and the value of U.S. coarse grain exports fell from $8.1 billion to $6.8 billion.

Export tonnage for U.S. coarse grains suffered its largest decline in Western Europe, where it fell 2.6 million tons, as that regions's grain production jumped 36 million tons. Grain yields in the EC leaped 23 percent above their 20-year trend; at the same time, coarse grain use fell and wheat feeding rose. The EC became a net exporter of coarse grains for the first time, and Western Europe's imports of coarse

grains from all sources were only half of 1982's tonnage. Similarly, Mexico's second consecutive increase in production led to a 2.1-million-ton decline in imports of U.S. coarse grains. South Africa's climbing production cut U.S. shipments another 1.9 million tons and will probably lead South Africa to resume exporting in FY 1986.

Japan and Korea imported less U.S. coarse grain in 1985 as China boosted its exports tenfold to over 5 million tons. Japan's coarse grain imports remained steady overall, but U.S. shipments fell 2 million tons to 13.7 million tons. U.S. shipments to Korea fell another 1.6 million tons as China replaced the United States as Korea's largest supplier.

Thai manioc competed with U.S. coarse grains as Thailand sought alternatives to an increasingly restrictive EC market. Thai manioc exports to non-EC destinations increased nearly 1 million tons in the first half of FY 1985, with Japan and Korea among the major importers. Manioc use by Dutch feed compounders reached record highs, and manioc extensively replaced coarse grains in Portugal following termination of government grain consumption subsidies. U.S. feed grain exports to Portugal fell 500,000 tons to 1.7 million tons.

Increased livestock production boosted U.S. coarse grain exports in a few cases, such as Taiwan's 500,000-ton jump following increased pig inventories. Increased egg and milk production in Venezuela helped U.S. shipments there rise 330,000 tons, and exports to North Africa gained.

Soybean Exports Decline Again

Stagnating consumption in major markets and a 40-percent rise in exports of U.S. competitors reduced U.S. soybean exports 14 percent to 16.6 million tons in 1985. Prices also dropped. Export value fell nearly $1.9 billion, one of the largest declines for any U.S. farm export in 1985. Consumption in the EC and Japan, importers of 60 percent of all U.S. soybean exports, rose only 1 percent in 1985. The EC and Japan increased their imports of less expensive beans from Brazil and Argentina and reduced imports of U.S. soybeans 490,000 tons and 200,000 tons, respectively. U.S. soybean sales to the USSR disappeared entirely, compared with 416,000 tons in 1984, as the Soviets imported from China and Argentina. Competition also reduced Mexican imports of U.S. soybeans.

Higher soybean and grain production cut imports by other U.S. soybean customers. A record-high grain harvest reduced U.S. soybean shipments to Spain 37 percent to 1 million tons. Similarly, Eastern Europe and Indonesia increased soybean production and reduced imports of U.S. soybeans 340,000 tons and 120,000 tons, respectively. Increased EC production of sunflowerseed and rapeseed allowed EC oilmeal consumption to increase in non-soybean meals and indirectly cut U.S. soybean exports.

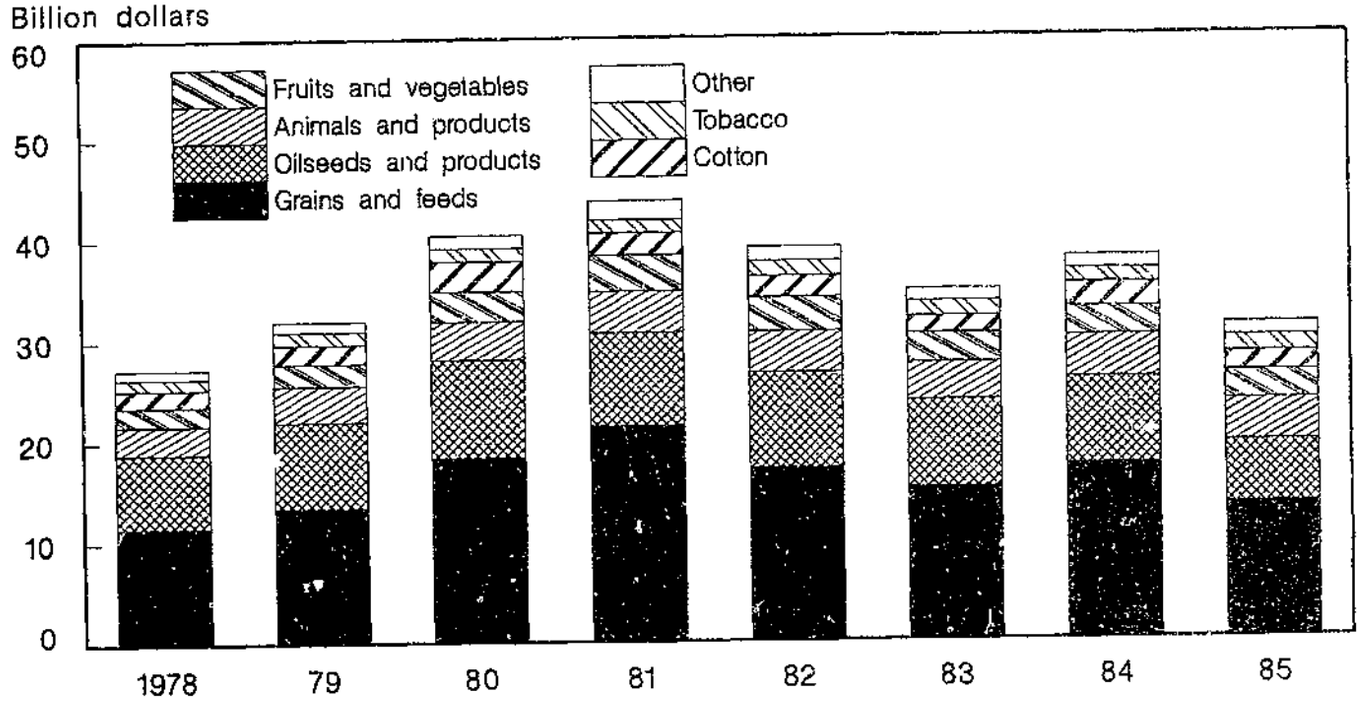
The most positive developments were slightly higher soybean exports to Taiwan, Venezuela, and the Middle East. The same areas, along with North Africa, also increased their purchases of U.S. soybean meal and coarse grains in 1985.

Cotton Exports Slip

U.S. cotton exports fell 14 percent in volume in 1985 to 1.3 million tons but remained 12 percent above 1983's level. Value dropped $450 million from that of 1984 as record-high foreign production cut prices and the U.S. market share. U.S. cotton exports began 1985 at a rapid pace but slipped steadily as foreign crops entered the market and world prices steadily eroded. The divergence between U.S. and world prices steadily widened during the year to about 20 percent.

Figure 1

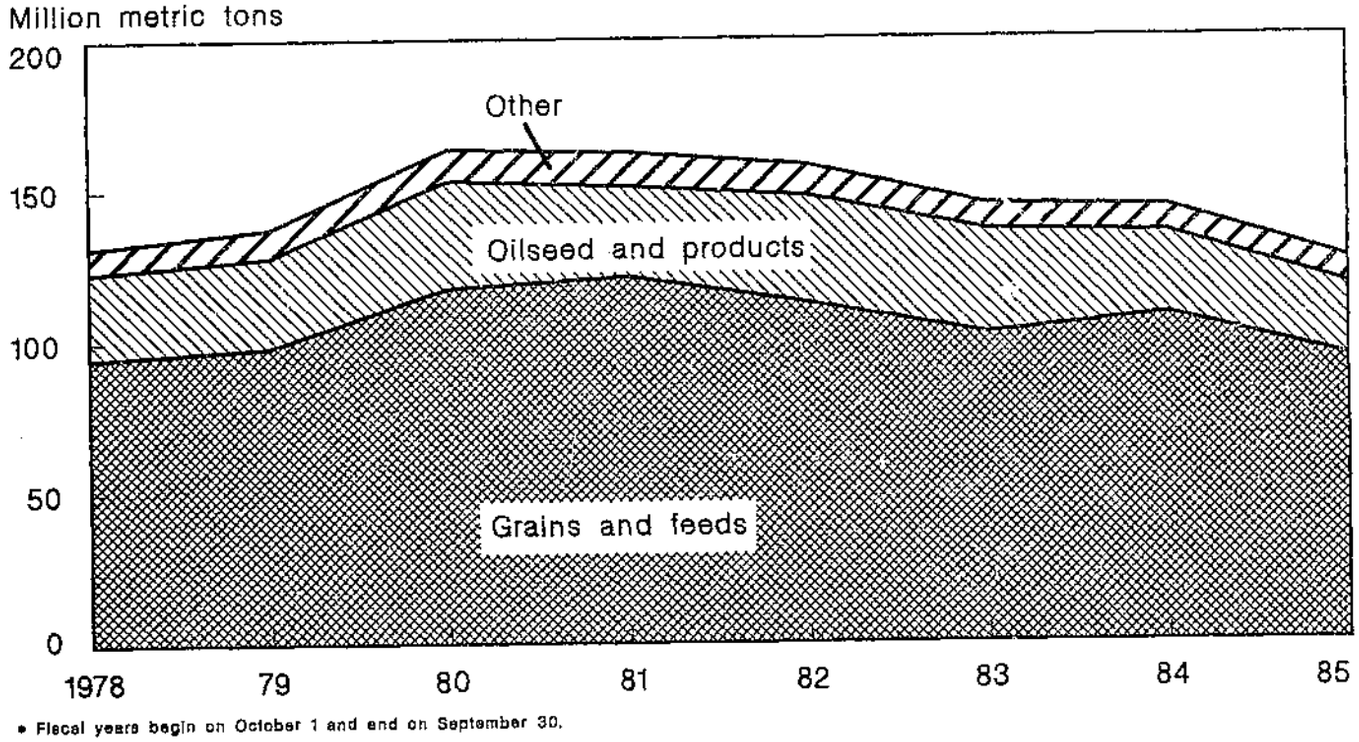
Value of U.S. Agricultural Exports, Fiscal Years 1978-85*



* Fiscal years begin on October 1 and end on September 30.

Figure 2

Volume of U.S. Agricultural Exports, Fiscal Years 1978-85*



* Fiscal years begin on October 1 and end on September 30.

U.S. cotton exports to Western Europe rose 5 percent to 270,000 tons as the preferred spinning characteristics of U.S. cotton outweighed the price differential and as consumption increased. Consumption in Japan, however, fell as textile imports rose. U.S. cotton exports to Japan fell 15 percent to 300,000 tons, but Japan remained the largest customer for U.S. cotton. Imports by Korea and Taiwan, the second and third largest U.S. customers, remained virtually unchanged at 272,000 tons and 110,000 tons, respectively.

U.S. cotton exports to Hong Kong fell nearly 40,000 tons as China replaced the United States as the colony's largest supplier. Exports to South Asia dropped 40,000 tons as rebounding production in Pakistan halted U.S. sales there and cut the U.S. share in Bangladesh. Shipments to Thailand and Indonesia fell 38,000 tons combined.

Horticultural Exports Steady

U.S. horticultural exports changed little in value in 1985 as increased sales of nuts, particularly almonds, offset lower fruit and vegetable exports. Fruit exports dropped 4 percent to $1 billion, led by a $40-million decline in Canadian imports. Last winter's Florida freeze reduced export availability, and stronger European apple production cut import demand in an important market.

The value of vegetable exports slipped $53 million to $946 million. Exports to Canada again accounted for the largest drop ($150 million) following higher vegetable production there, but shipments to South America rose $44 million as U.S. pulses were used to cover local production shortfalls.

Nut shipments to the USSR and the EC accounted for the largest increases in U.S. horticultural exports. Nut exports rose more than $100 million as U.S. almond production rebounded and European producers faced lower supplies. Shipments to the EC rose 25 percent to $310 million, while Soviet purchases rose from $7 million to $74 million. (Stephen MacDonald, International Economic Indicators Branch)

U.S. Farm Imports Reach Record High

Increased consumer demand, unfavorable weather, and higher prices in the United States boosted the value of U.S. agricultural imports to a record high of $19.74 billion in fiscal year (FY) 1985 (October 1984-September 1985), up $820 million from 1984's level. Imports totaled $1.7 billion in September 1985 compared with $1.6 billion in September 1984. Consumer demand continued to gain for such items as fruit juices, fruits, and vegetables. However, winter freezes in Florida and a spring frost in portions of the Northwest dampened production and increased U.S. prices of those commodities.

Farm products from developing countries accounted for 58 percent of all U.S. agricultural imports in FY 1985 and grew 3 percent over 1984's level to $11.5 billion compared with $7.8 billion from developed countries. Brazil remained the largest source of U.S. agricultural imports, followed by Canada, Mexico, Australia, Colombia, Indonesia, France, New Zealand, The Netherlands, and Denmark.

Noncompetitive Imports Increase

Noncompetitive imports accounted for nearly 35 percent of all farm imports in FY 1985 and inched up 2 percent to $6.78 billion, despite declines for coffee, natural rubber, tea, and essential oils. Coffee and product imports, the leading noncompetitive import, totaled $3.2 billion, declining 3 percent from 1984's level. Table 8 shows U.S. import volumes for the 10 largest suppliers for FY 1985 compared with those for 1984.

U.S. coffee consumption continued its long-term decline, and volume of U.S. coffee imports remained the same as 1984's level. Average monthly U.S. wholesale prices for Brazilian coffee declined from $1.46 a pound in September 1984 to $1.37 a pound in October 1985. Brazil's drought may spur coffee prices the first part of FY 1986.

Table 8--U.S. coffee and product imports: Quantity by principal origin

Cocoa beans and products, the second leading noncompetitive import, totaled $1.3 billion, 18 percent higher than year-earlier levels. Volume jumped 20 percent as import unit prices increased 2 percent to $2,386 a ton. Larger imports were the result of manufacturers replenishing stocks to maintain normal operation. Cocoa beans and chocolate preparations led the increases. The Ivory Coast supplied nearly 26 percent of U.S. cocoa import volume in FY 1985 compared with 21 percent in 1984. Brazil, Ecuador, the Dominican Republic, the Netherlands, and the United Kingdom were the other major suppliers.

Natural rubber imports fell 20 percent from those in FY 1984 to $680 million due to lower volumes and prices. The volume declined to 799,000 tons compared with 809,000 tons in 1984. Unit import prices dropped 19 percent to $851 a ton. However, reduced inventories, continued growth in the industrial sector, and lower prices are expected to boost import volumes. Indonesia supplied 60 percent of U.S. rubber imports, while Malaysia, Thailand, Liberia, and Singapore provided nearly all of the remainder.

Import values increased for bananas and spices, while those for tea and essential oils declined. Banana imports, which enter the United States duty-free, totaled $752 million, up nearly 13 percent from those of 1984. Latin America supplies nearly all of the bananas.

Competitive Imports Expand

Competitive imports in FY 1985 expanded 6 percent to $12.9 billion, despite declines for raw sugar, coconut oil, cheese, and live cattle. Fruit juices, fruits, beef, and pork have been stronger than expected in FY 1985 and accounted for most of the rise. Beef provided nearly 59 percent of all meat imports and increased 8 percent in value to $1.3 billion. Volume gained 23 percent to 674,000 tons as U.S. beef output declined. Australia supplied nearly 40 percent of fresh and frozen beef volume, with New Zealand and Canada shipping together over 39 percent. Larger import volumes advanced the value of pork 20 percent to $847 million. Fresh and frozen pork from Canada and canned pork from Denmark rose substantially. However, higher than expected pork output this summer and lower Danish export subsidies are expected to reduce pork imports moderately in FY 1986.

The value of raw sugar imports fell 20 percent to $912 million, while volume dropped 18 percent to 2.3 million tons. Import unit prices declined in FY 1985, averaging about $390 a ton compared with $405 a ton in 1984. World surpluses and higher use of corn sweetener substitutes by the beverage industry reduced sugar imports and contributed to the decline in sugar prices. The Dominican Republic, the leading sugar supplier, provided 20 percent of the U.S. import volume. Import volume also declined from most other suppliers, particularly Brazil, the Philippines, Argentina, Guatemala, and Peru. Higher output, however, in Australia, Colombia, and El Salvador led to larger volume increases.

Unfavorable U.S. weather conditions and higher prices spurred imports of fruit, fruit juice, and products 38 percent in value to $1.8 billion. Imports of concentrated orange juice from Brazil, apple juice from Argentina, fresh grapes from Chile, and canned pineapples from the Philippines and Thailand substantially exceeded FY 1984 levels. Increased consumer demand and higher prices boosted fruit values 22 percent to $796 million. Fruit juice volume increased 29 percent above 1984's levels to 928 million gallons valued at $995 million. Unit import prices for fruit juice gained 15 percent, while those for fruit increased nearly 9 percent.

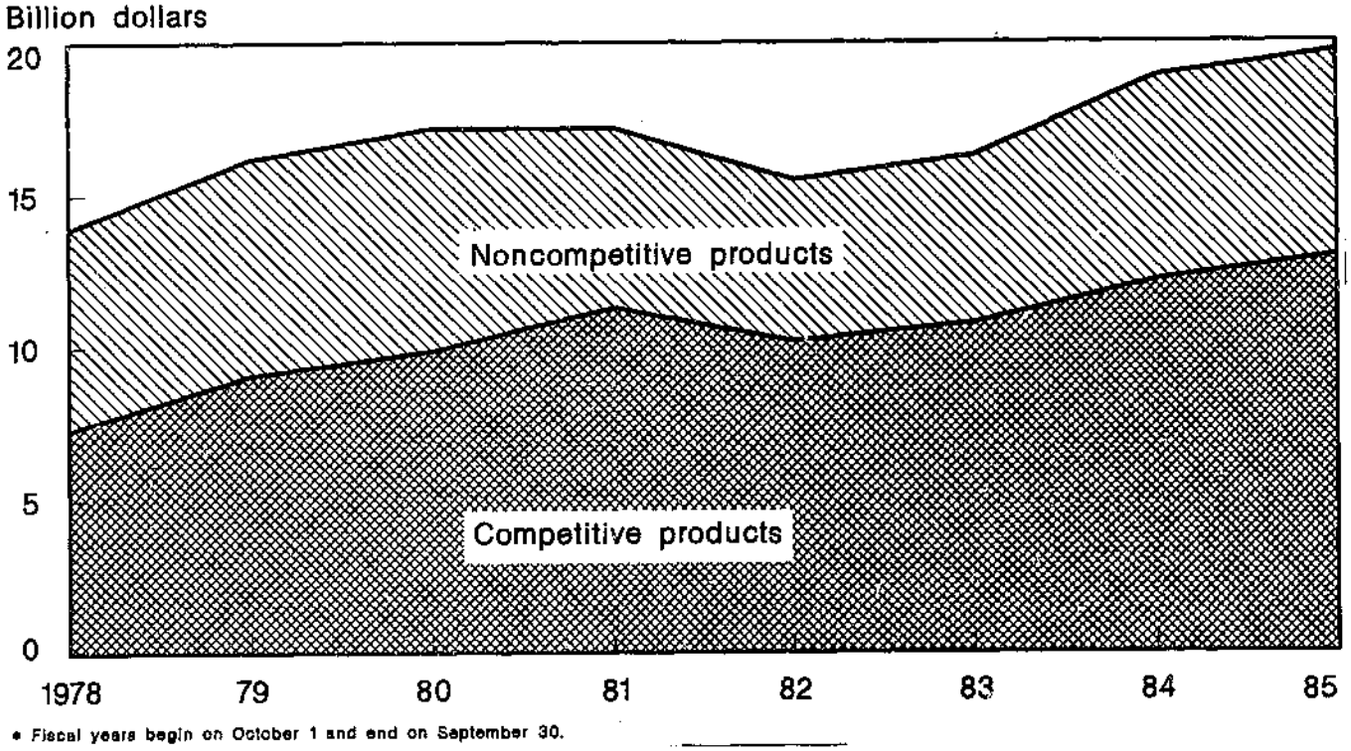
Imports of vegetables and preparations expanded just under 3 percent in FY 1985 to $1.35 billion. Import volume gained less than 2 percent to 2.1 million tons because

of declines of fresh vegetables from Mexico. Fresh tomatoes, cucumbers, onions, peppers, squash, and eggplant are the principal vegetables imported from Mexico. In contrast, higher prices for cucumbers, eggplants, onions, and peppers pushed the value of fresh vegetables and products from Mexico to $517 million compared with $469 million in 1984. Canned mushrooms from Taiwan and China fell short of 1984 levels by over 6,782 tons, while potatoes from Canada gained.

Lower prices for coconut oil and palm kernel oil held oilseed and product values to a gain of 2 percent to $784 million. Coconut oil imports fell 10 percent to $302 million, while volume declined 4 percent to 404,000 tons. Palm and palm kernel oil imports rose 28 percent in volume to 308,000 tons. The Philippines, Malaysia, and Indonesia are the primary suppliers of coconut, palm, and palm kernel oils.

Reduced shipments from Mexico pushed down dutiable cattle entries in FY 1985 to 577,000 head ($245 million) from 822,000 head ($293 million) in 1984. Canada, however, shipped 365,000 head to U.S. markets during FY 1985 compared with 358,000 head in 1984. Fewer U.S. hog marketings and lower pork output sharply increased live hog entries from Canada in FY 1985 to nearly 1.5 million head compared with 1 million head in FY 1984. Countervailing duties (Canadian $4.39 per hundredweight) are expected to cut live hog imports to below 1 million head in FY 1986.

Value of U.S. Agricultural Imports, Fiscal Years 1978-85*



* Fiscal years begin on October 1 and end on September 30.

Imports of unmanufactured tobacco increased less than 1 percent in volume during FY 1985 to 191,000 tons. However, because of lower prices, the value declined by 1 percent to $556 million. Oriental filler leaf contributed to the largest proportion of imports, increasing 5 percent to 150,000 tons, valued at $499 million. Turkey, Brazil, and Greece were the major suppliers of unmanufactured tobacco.

Wine and malt beverage imports in FY 1985 rose 7 percent to $1.6 billion. France, Italy, and West Germany are the major suppliers of wines, with the Netherlands, Canada, and West Germany providing the beers.

Cheese imports declined 6 percent in value to less than $364 million, mainly due to lower volume and prices. Volume slipped 3 percent to 135,000 tons. Western Europe provided 75 percent of all U.S. imported cheeses.

Grains, feeds, cashew nuts, cut flowers, nursery stock, and casein also gained in value in FY 1985. (Charles E. Goode, International Economic Indicators Branch)

Farm Commodity Prices To Continue Depressed

World agricultural production expanded 5 percent in 1984 compared with an average annual increase of 1.5 percent for the preceding 4 years. U.S. agricultural production rose 18 percent, expanding agricultural output in industrial countries 9 percent. The U.S. increase more than offset declines in Canada, Australia, and New Zealand, while agricultural output in developing countries increased about 2.5 percent in 1984.

Although world agricultural exports increased 7 percent in volume in 1984, double the average annual rate of the past 20 years, world export prices in U.S. dollars declined in 1984. However, with the appreciation of the U.S. dollar, prices increased when expressed in the local currencies of a number of countries.

The sharp expansion in world agricultural production in 1984 continued to depress commodity prices in the first half of 1985. As prospects firmed for a burdensome carryover from the 1984 crop and a bumper 1985 crop of grains and oilseeds, commodity price declines accelerated. Increased production among several major importers will reduce export demand prospects in coming months, although continued U.S. economic growth and higher livestock prices may lead to greater domestic feed use.

Low Demand Depresses Wheat Prices

U.S. wheat export prices have declined steadily since 1981 and have not exhibited the volatility of the late 1970's when U.S. gulf export prices fell to $105 a ton in 1977 before rising to $176 in 1980-81. In 1985, U.S. wheat export prices remained near $150 a ton, slightly less than in 1984, until prices began falling steadily in May to a low in August of $124. Prices for Hard Red Spring wheat and U.S. White wheat also dipped to $130 a ton in early August before rising to near $140 in September.

Dry weather in most of North America, Australia, and Argentina, and wet weather in northwestern Europe are expected to reduce wheat production among major exporters; however, lower world import demand is expected to keep world wheat prices low through the remainder of 1985/86.

Overseas Coarse Grain Production Lowers Prices

U.S. corn prices have fluctuated steeply over the past 10 years. Prices reached a low of $98 a ton in 1977, followed by $135 a ton in 1981, $110 in 1982, and $137-$138 a ton in 1983 and 1984. Prices remained stable at $117-$122 a ton during January-July 1985 before falling sharply to near $100 in September. Sorghum prices in 1985 held at $105-$115 a ton until August when prices fell to $85 a ton, and remained the same in September. World coarse grain production, especially in the United States, gained in 1985 and will combine with near record-high stocks to continue downward pressure on world coarse grain prices.

Cotton Prices Decline Steadily

U.S. cotton prices have increased over the past decade, fluctuating widely with the state of the world economy and supply and demand factors. The lowest prices averaged 60 cents a pound in 1975, and peak prices averaged 98 cents in 1980. U.S. exports of raw cotton reached a record high in 1980. U.S. prices have declined steadily since

June 1984 as the burgeoning world surplus shows no signs of abating. As of September 1985, prices at 67 cents a pound were at their lowest in 7 years. Prices will remain weak, with expected stocks in excess of 51 million bales by the end of the current crop year.

Record Soy Prices Falling

U.S. soybean prices started 1985 at $230 a ton, substantially below the $260-$280 price maintained since 1977. U.S. soybean prices fell to $222 a ton in May 1985 and declined sharply to $200 a ton in September, the lowest price since 1975's average of $210 per ton. Slow demand growth and increased production are expected to continue depressing market prices in 1985/86.

U.S. soymeal prices have fluctuated more than those for soybeans, following an annual pattern similar to that for soybeans. U.S. soymeal prices opened at $150 a ton in 1985 for 44-percent free-on-board Decatur soymeal compared with the highs of $210-$220 a ton since 1977. Soymeal prices declined to a low of $122 a ton between January and June 1985 and rose to $144 in September.

Slow livestock growth and ample beef supplies, particularly in the European Community, may continue to restrain further price increases for U.S. soymeal. However, reduced export competition may help strengthen demand for U.S. soymeal, depending on Brazilian production.

U.S. soyoil prices have fluctuated most among soy products during the past decade. Soyoil prices reached a low of $404 a ton in 1982 and a high of $678 in 1984. U.S. soyoil prices rose steadily from $633 a ton in January 1985 to a peak of $751 a ton in April, slacked during May and June, and fell sharply in September to $470 a ton.

Last year's highs for soyoil prices caused by tight supplies will likely give way to lower prices as palm oil and other oilseed production expands. U.S. soyoil prices, however, remain above world prices. (Edward C. Wilson, International Aggregate Analysis Branch)

U.S. Farm Exports to EC Continue Falling

The high value of the dollar and large stocks, rising production levels, and weak economic growth in the European Community (EC) reduced U.S. agricultural exports to the EC in fiscal year (FY) 1985 (October 1984-September 1985) to $5.3 billion from 1984's $6.7 billion and 1980's record high of $10.3 billion. U.S. farm exports to the EC as a proportion of total farm exports fell from 25.5 percent in 1980 to 17.1 percent in 1985. U.S. exports to the EC are unlikely to improve in FY 1986 because of a continuation of these trends.

The top five importers of U.S. farm products in Western Europe in FY 1985 were The Netherlands ($1.9 billion), West Germany ($0.9 billion), Spain ($0.8 billion), Italy ($0.7 billion), and the United Kingdom ($0.6 billion). The total value of U.S. exports to Western Europe in FY 1985 was $7.2 billion. For the year, Western Europe was second only to Japan as a consumer of U.S. farm products.

The Situation in FY 1985

The value of U.S. farm exports to the EC in FY 1985 declined substantially for almost all categories of agricultural products, including livestock and livestock products, grains and feeds, fruits and vegetables, oilseeds and products, and cotton. 1/ Nuts and preparations, tobacco, and other agricultural products increased slightly but not enough to offset the declines in other products. Declining export volumes accompanied declining export values.

An important factor in the decline of U.S. agricultural exports to the EC has been the high value of the dollar. The dollar has strengthened almost continuously since 1980 and reached an all-time high in February 1985 at 1.48 European Currency Units (ECU) to the dollar, an increase of 114 percent over the January 1980 rate. Since February, the value of the dollar has declined 15-20 percent against the ECU but is still not below the average rate for FY 1984.

Slow economic growth (-0.2 percent in the first quarter of 1985), high unemployment (11.1 percent in the first quarter), and slow population growth (0.16 percent annually) in the EC also reinforced the effect of exchange rates on U.S. agricultural trade in FY 1985.

The EC's increasing farm and food production contributed more generally to reduced demand for U.S. agricultural exports, particularly grains. High prices, import protection, export aids, and subsidies to encourage new high-protein crops led to expanded EC domestic production. The subsidies for development and production of high-protein crops, such as sunflower seeds, sweet peas, and lupins, are a particular problem because they substitute for soybeans and soybean meal, two major U.S. export products. Furthermore, the EC had record-high carryover grain stocks in FY 1984 to add to their large surpluses of wine, olives, dairy products, and beef. Changes in EC agricultural and livestock technologies, such as new high-yielding wheat varieties and computerized livestock feeding, are an additional and increasingly important source of advancement in EC farm productivity. In view of the EC's use of variable levies and other policy instruments designed to give preference to EC domestic products, all increases in EC production translate automatically into reduced demand for U.S. exports.

1/ The following countries make up the EC: Belgium, West Germany, France, Italy, Luxembourg, The Netherlands, Denmark, Ireland, The United Kingdom, and Greece.

Commodity Highlights

Although U.S. agricultural exports to the EC generally declined in FY 1985, exports of some minor commodities increased substantially. Export value to the EC increased more than 100 percent for each of the following commodities: Fresh oranges and tangerines (up 651 percent), miscellaneous live animals (434 percent), lard (267 percent), cotton linters (247 percent), cocoa (179 percent), miscellaneous prepared fruit (131 percent), crude feathers and down (112 percent), nonfat dry milk (111 percent), and fresh lemons and limes (101 percent). The total value of these exports to the EC reached $34.4 million.

More important to U.S. export sales were the commodities whose exports to the EC rose by a smaller percentage but had a larger dollar value. Export value of each of the following commodities exceeded $75 million: Almonds (up 40 percent), field and garden seeds (23 percent), flue cured tobacco (10 percent), peanuts (6 percent), and miscellaneous feeds and fodders (5 percent). The total export value of each of the following commodities was between $25-$75 million: Miscellaneous oilseeds (up 92 percent), raisins (17 percent), walnuts (24 percent), essential oils (11 percent), and fresh citrus fruits (8 percent). The total export value to the EC in these two commodity groupings in FY 1985 was $1 billion.

Export declines of other U.S. commodities offset export growth of the above commodities. Export value for each of the following commodities exceeded $100 million: corn (down 49 percent), soybean meal (45 percent), corn byproducts (23 percent), soybeans (25 percent), sunflower seeds (16 percent), hides and skins, including furs (40 percent), prepared fruit, excluding juice (8 percent), and meats and meat products (5 percent). The total export value of these commodities in FY 1985 to the EC was $2.9 billion. These were the most important export commodities in U.S. trade with the EC for the year.

Prospects for FY 1986

U.S. agricultural exports to the EC are unlikely to improve in FY 1986 in the absence of a weaker U.S. dollar, a strong increase in EC consumer demand, or a poor EC harvest. The dollar has begun to weaken relative to the ECU but it remains high by historical standards and any effect will be delayed until late in FY 1986 by normal lags in response of trade to exchange rate changes. EC consumer demand is not expected to increase substantially because of continued slow economic growth, high unemployment, and slow population growth. The EC harvest, although hampered by poor weather, is still expected to be large by historical standards. Grain production, for example, is expected to be roughly 140 million metric tons with consumption of about 120 million tons, which will leave the EC with additional carryover stocks of 20 million tons.

Several EC policy developments expected in FY 1986 are also likely to hamper U.S. agricultural exports. The entry of Spain and Portugal into the EC on January 1, 1986, will add to EC agricultural productivity and divert EC domestic products, such as feed wheat, into the Spanish and Portuguese markets. The proportion of the member-country value-added tax revenues allocated to the EC is also scheduled to increase from 1.0 to 1.4 percent on January 1, 1986. The added revenues are primarily intended to support an increase in expenditures associated with enlargement. These revenues, however, will also permit the EC to carry larger stocks of surplus commodities without lowering domestic support prices, to increase production subsidies for high-protein crops, and to increase export subsidies without provoking a budgetary crisis. (Stephen W. Hiemstra, Western Europe Branch)

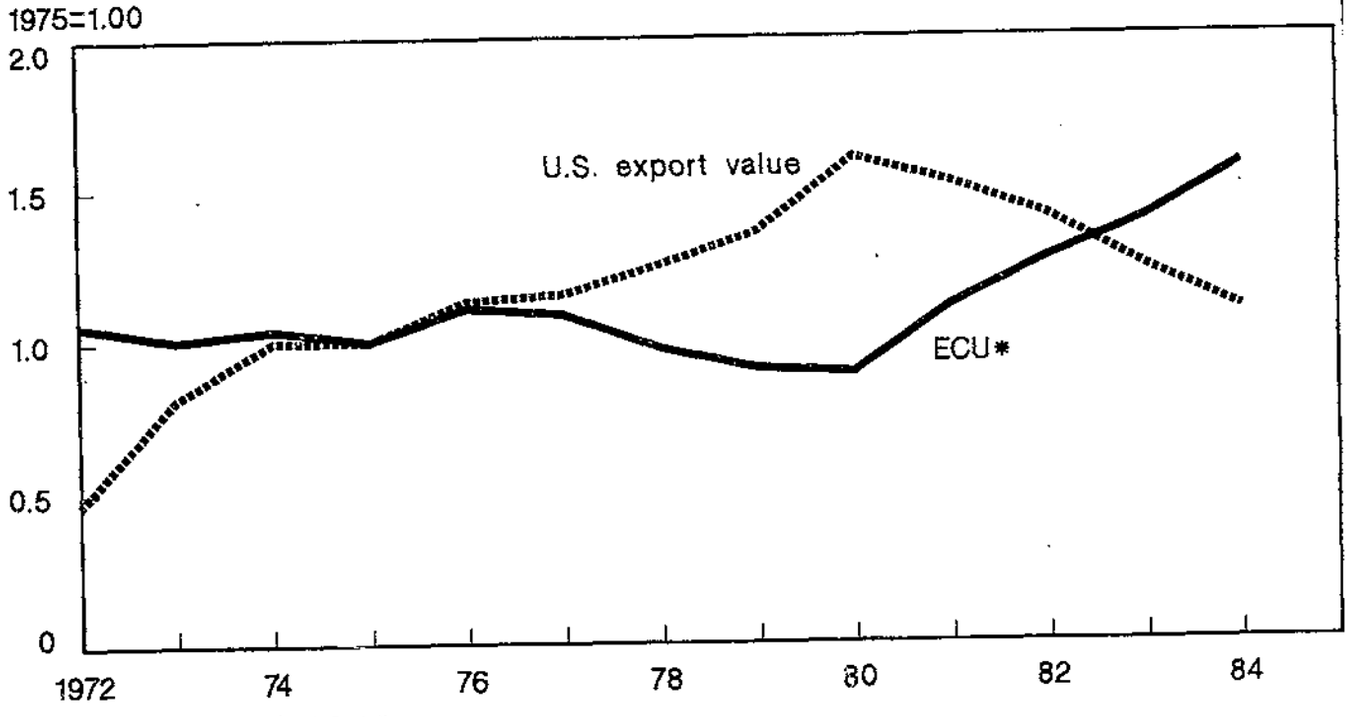
U.S. Exports and EC Exchange Rates, Calendar Years 1972-84



* ECU (European Currency Unit) = U.S. dollar.

Ocean Freight Rates Remained Weak in 1984

Average ocean freight rates for grain remained weak for the fourth year in a row in 1984, and reached their lowest level since 1978. The average annual Maritime Research rate index for grain was 207.9 in 1984 compared with 185.5 in 1978 and the peak of 374.2 reached in 1980. Despite growth in dry bulk seaborne shipments (demand), rates did not rise appreciably due to increased dry bulk vessel supply.

Demand for Bulk Shipping Increased

The demand for bulk shipping is derived primarily from shipment of commodities, such as crude oil, petroleum products, iron ore, coal, grain, bauxite, and phosphate. The demand for dry bulk shipping is concentrated in dry bulk commodities, such as iron ore, coal, and grain. Collectively, these three commodities account for the majority of world dry bulk movements.

Seaborne trade of bulk commodities increased in volume in 1984 over that of 1983, and world trade rose for the first time since 1979 (table 18). Crude oil shipments moved up about 2 percent over 1983's level but remained well below levels of the late 1970's. Petroleum product shipments decreased slightly more than 1 percent. Liquid bulk demand affects the availability of excess supply of tankers and combination carriers (ships capable of transporting both liquid and dry bulk commodities) that can compete in the dry bulk trades.

Source: Fearnley's, Review 1984, Oslo, Norway, 1985.

Volume of all major dry bulk commodities increased in 1984 over 1983 levels, primarily because the world economy grew. Rising steel production in the developed countries and lower iron ore prices pushed up shipments of iron ore, the highest volume dry bulk commodity, more than 16 percent over 1983 levels, bringing 1984 shipments near 1981 levels but somewhat lower than the 1979 peak.

Coal volume rose about 12 percent from 1983 to 1984. The record-high of 220 million metric tons in 1984 reflected a strong rise in hard coal shipments. Coal exports from the United States and Canada fell. However, increased coal shipments from Australia and South Africa to Japan and the Continent more than compensated for the drop, resulting in a significant increase in total coal shipments.

Grain trade rose 2 percent between 1983 and 1984. Grain shipments since 1981 have leveled off at an annual average of around 200 million metric tons. Before that, volume had grown significantly since 1974. Despite decreased shipments from Argentina, increased shipments to the USSR in 1984, particularly from the United States, accounted for much of the 1984 increase.

Excess supply

Excess shipping capacity in the market prevented dry bulk rates from rising, appreciably, despite increases in demand in 1984. Three principal supply factors led to the surplus: (1) the delivery of more new dry bulk vessels; (2) fewer laid up or idle ships (laid up vessels are docked and taken out of service for lack of employment; idle ships are those which are damaged, used for storage, are under repair, etc.); and (3) more combination carriers operating in the dry bulk trades.

Orders for dry bulk ships decreased nearly 9 percent from 1983 to 1984 (table 19). Combination vessel orders increased about 64 percent. However, in absolute terms, combination vessel orders were small. Total tonnage of both types of vessels on the order books reached 25.6 million deadweight tons as of December 31, 1984, of which tonnage of dry bulk vessels accounted for nearly 93 percent. About 65 percent of this tonnage is to be delivered in 1985. Given current scrapping levels, future supply (December 31, 1984, current supply plus all orders for new ships) of bulk and combination vessels will total 230.7 million tons, an increase of nearly 9 million deadweight tons.

The world fleet of dry bulk carriers increased about 4 percent in 1984. If the scrapping rate remains the same as it was then, the dry bulk carrier fleet will increase about 6 percent in 1985. The combined carrier fleet declined slightly in 1984 and is projected to increase nearly 2 percent in 1985.

Average monthly laid up/idle tonnage dropped about 32 percent from 1983 to 1984 (table 20). For the first 2 months of 1985, the average tonnage dropped 12 percent from the 1984 average.

Average monthly slow steaming (ships that reduce speed to save fuel in periods of low utilization; if they sailed at full speed, they would not be fully utilized) ship tonnage increased about 13 percent from 1983 to 1984 and rose another 12 percent in the first 2 months of 1985 because more vessels were being taken out of layup than necessary to meet the increased dry bulk demand in 1984.

Table 19--World orderbook for bulk vessels

Year 1/	Bulk ships	Combination vessels 2/	Total	Future supply 3/
		Million deadweight tons		
1978	7.4	0.8	8.2	162.3
1979	12.4	1.1	13.5	174.3

A larger share of the combined carrier fleet in the dry bulk trades (reaching 88 percent in June 1984) followed increased demand in 1984. The increased share added approximately 3 million deadweight tons to the excess supply in the market, thereby weakening dry bulk rates and pushing the share back to about 80 percent.

New deliveries and 75-percent participation by combination carriers in the dry bulk market will cause the oversupply problem to continue, despite increased demand and high scrapping rates. In addition, laid up tonnage is expected to fall if demand continues to increase. A reduction of combination carriers to 60 percent, assuming growth in the oil trades, could also lead to a better balance in the market. In any case, supply must come more into line with demand for any significant rate increase.

Size of Vessels Transporting U.S. Grain Exports

The largest proportion of vessels (37 percent) transporting U.S. grain exports in 1984 were smaller than 40,000 deadweight tons of cargo capacity (table 21). Vessels 60,000-80,000 deadweight tons accounted for 28 percent; vessels, 40,000-60,000 deadweight tons, 17 percent; vessels over 100,000 deadweight tons, 15 percent; and vessels 80,000-100,000 deadweight tons, 3 percent. Most larger capacity, deep draft vessels tend to operate on major trade routes to deepwater ports, such as those in Northern Europe. Conversely, smaller vessels, such as those with less than 40,000 deadweight tons capacity, operate on routes to countries with smaller ports and shallower channels.

Table 21--Grain shipments by vessel size and share of U.S. grain exports, 1983

Size group	Share of U.S. grain exports
Thousand deadweight tons 1/	Percent
Below 40 2/	37
40-60	17
60-80	28
80-100	3
100 and over	15
Total	100

1/ Long tons of cargo capacity.
2/ Percentage for this category is a residual computed by subtracting the total of shipments carried on vessels over 40,000 deadweight tons from the total quantity of seaborne grain movements.

The World and U.S. Merchant Fleets

The world fleet consists mainly of three main types of ships: bulk carriers (including combination carriers), tankers, and freighters. Bulk carriers accounted for about 32 percent of the world merchant fleet in 1984, tankers about 48 percent, and freighters 19 percent.

Total capacity of freighters and bulk carriers has continued to grow since the 1960's (table 22). Demand in the dry bulk trades has continued to increase the size of the bulk fleet. The deadweight tonnage of tankers has decreased every year since the 1977 peak because of declining crude oil trade.

The U.S. fleet continues to decline (table 23). The U.S. fleet ranked 8th in the world in terms of deadweight tonnage and 10th in number of vessels. Tankers decreased in both number and tonnage, and freighter numbers and tonnage remained nearly the same. However, despite a reduction of one bulk carrier from the fleet, deadweight tonnage increased 249,000 deadweight tons. Nevertheless, the U.S. fleet could carry a very small portion of the Nation's international trade.

Many of the 84 countries with bulk ships registered under their flag experienced fleet size reductions in 1984. Liberia, Greece, and Norway had reductions while Panama, Cyprus, and the Bahamas collectively increased 12 million deadweight tons. However, Liberia still has the largest flag registry, with 112 million deadweight tons of capacity, despite a reduction of 7 million tons in 1984.

Voyage Charter Grain Rate Levels 1982-85

The general level of grain rates declined for the fourth year in a row in 1985 (fig. 1). The average Maritime Research grain index in 1984 was 207.9 compared with the peak level of 374.2 in 1980. Rates during this period have been driven by the prevailing supply and demand relationships operating in the freight market.

Tables 24-27 show detailed grain rates for specific U.S. trade routes. Rates reflect weighted averages of voyage charter rates using cargo size as the weighting variable.

The Timecharter Market 1/

Timecharter rates, like voyage charter rates, have declined significantly since the 1980 peak (fig. 2). Timecharter rates had strengthened proportionately more than voyage charter rates by 1984, and both Panamax and large bulker trading were active in the timecharter market. The Russians, Japanese, and Koreans generated much of the interest in timechartering. The Russians were regularly chartering Panamax vessels for the Atlantic trade.

Most owners were reluctant to offer vessels for timecharter for more than a 12-month period in the first half of 1984 because owners were optimistic about a stronger freight market in the second half of the year. Owners were also influenced by doubts of sustained demand and by the oversupply of capacity in the market. Many industry analysts remain pessimistic about improvement in the market in 1985. (J. Michael Harris and Robert M. Bennett, National Economics Division)

1/ Vessels are chartered for a period of time, sometimes up to 2-3 years.

Agriculture • Economics

Reports

From USDA's Economic Research Service

Dynamics of Comparative Advantage and the Resistance to Free Trade, by Thomas Vollrath. FAER-214. August 1985. $1.00. SN: 001-019-00396-1.

The income gap between developed and developing countries could narrow if developing countries' economies become more responsive to market forces. Primary manufacturing has become the fastest growing component of many developing countries' export growth. The author cites 26 developing countries which have built industries to produce and export basic manufactures, such as clothing, footwear, furniture, electrical machinery, and nonmetal mineral manufacturing. The United States has an interest in developing countries' economic growth because it can provide much of their rapidly growing food import needs.

Developmental Consequences of Unrestricted Trade, by Thomas Vollrath. FAER-213. May 1985. $1.00. SN: 001-019-00391-0.

International trade, unencumbered by protectionism, stimulates economic growth in both developed and developing countries. This study, which examines the fundamental economic forces that determine how trade affects development and growth, shows that undistorted trade becomes a catalyst to economic growth by unleashing market forces which promote development.

Financial Constraints to Trade and Growth: The World Debt Crisis and Its Aftermath, by Mathew D. Shane and David Stallings. FAER-211. December 1984. $2.00. SN: 001-019-00381-2.

The debt problems of developing countries will severely limit their ability to purchase goods in the world market for at least the next 5 years. Resolution of these debt problems could increase potential U.S. agricultural exports by as much as 20 percent. The large debts of the developing countries became serious problems with the shifts to tighter monetary policies by the developed countries in the late seventies and consequent slowing of inflation and credit flows. Eighteen countries which are major markets for U.S. agriculture hold more than 60 percent of the problem debt. Both current debts and national economic policies in the developing countries must be restructured to begin the strengthening of those countries' economies. Developed countries can help the economic recovery of developing nations by providing markets for their export commodities.

Foreign Exchange Constraints to Trade and Development, by Philip C. Abbott. FAER-209. November 1984. $2.25. SN: 001-019-00340-5.

Many developing countries, facing huge trade deficits and shortages of foreign exchange, reduced their agricultural imports over the past few years from the United States and other countries. Unless cash-short developing countries increase their exports and obtain food and financial aid, their agricultural imports will grow much more slowly in the next decade than in the last. While many developing countries face long-term problems, others appear to be in short-term liquidity crises; if their export growth resumes, so will their agricultural imports. China, Brazil, Mexico, Nigeria, and India are key to world cereal trade. Those projections are based on a two-gap model applied to 31 developing countries.

How to order . . .

To cover costs of special handling of international mail, a surcharge of 25 percent must be added on all items shipped to a foreign address. Remittance in U.S. dollars must accompany every order and be in the form of a check drawn on a bank located in the United States or Canada, a UNESCO coupon, or an International Postal Money Order made payable to Superintendent of Documents. Or use your MasterCard, VISA, or prepaid Superintendent of Documents deposit account. Mail your order to **Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, USA.** For airmail service, please contact Superintendent of Documents by letter, telephone (202/783-3238), or Telex (710-822-9413; ANSWERBACK USGPO WSH) for the total cost of your order.

World Food Grain Trade Up 112 Percent, 1962-83

The number of countries buying and selling wheat, wheat flour, and rice rose by 85 percent between 1962 and 1983, according to World Food Grain Trade, 1962-83: Wheat, Rice, and Wheat Flour.

This new report from the U.S. Department of Agriculture's Economic Research Service includes trade data from the United Nations and from a host of countries which don't supply figures to the U.N.

Order your copy of World Food Grain Trade, 1962-83. Wheat, Rice, and Wheat Flour (SN: 001-019-00415-1) from Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

For faster service, call the GPO order desk at (202) 783-3238, and charge your purchase to your VISA, MasterCard, Choice, or GPO Deposit Account.
