FRESH MARKET VEGETABLE PRICES

VEGETABLES, MELONS, STRAWBERRIES

Monthly and Season Averages

By Commodities, Seasonal Groups, States, and United States, 1959-65

This publication presents revised official estimates of prices of principal fresh market vegetables, by commodities, seasonal groups, States, and months from January 1959 through December 1965. Estimates in this bulletin for the period from January 1959 through December 1961 supersede fresh market vegetable prices published in Statistical Bulletin 318. That bulletin also included price data for the period from January 1954 through December 1958, and these data have not been revised. Price data by States and months are not available prior to 1954 for fresh market vegetables.

In this publication, the term "fresh market" refers to that crop or portion of a crop which has been sold for fresh consumption. It does not include the portion sold for canning, freezing, or other processing.

These price estimates are based primarily on information obtained by State Statisticians from growers, shippers, wholesale markets, and auction markets, and on quotations from the market news reports of USDA's Consumer and Marketing Service. They represent sales for the entire month, f. o. b. shipping point, except for garlic, for which prices are reported annually on a field run basis at the packinghouse door.

U. S. monthly average prices (excluding Alaska and Hawaii) were computed by weighting State prices by volume of sales during the month. Monthly prices are not estimated for a State when sales during the month total less than one-half of 1 percent of the season's total sales in that State. Season average prices pertain to a crop year and should not be confused with a calendar year average. The monthly prices published in this bulletin start with January 1959. Therefore, prices for sales of the 1959 winter crop that occurred in late 1958 are not shown. However, monthly prices for late marketing of the 1958 crop which extended into 1959 are shown.

Due to the seasonal nature of the production of vegetables and melons and their perishability, information on supplies available during specific periods of the years was needed to facilitate orderly marketing. Vegetable, strawberry, and melon estimates, by States, for the 28 principal crops are classified according to the season or period within the season when the bulk of each crop is usually harvested. Forecasts and estimates of acreage and production provide a measure of supplies available in specific seasonal periods. The seasonal groupings used are as follows:

SEASONAL GROUPS AND SUBGROUPS USED FOR VEGETABLE AND MELON CROPS

(Dates refer to period of most active harvest)

Classifications most commonly used

Winter: January, February, March
Spring: April, May, June
Early Spring: April 1-May 15
Late Spring: May 16-June 30
Summer: July, August, September

Early Summer: July 1-August 15
Late Summer: August 16-September 30
Fall: October, November, December
Early Fall: October 1-November 15
Late Fall: November 16-December 31

Classifications used for certain short-season crops

Early Spring: April
Midspring: May
Late Spring: June

Early Summer: July
Midsummer: August
Late Summer: September

The seasonal patterns of harvest do not correspond in all States exactly to the periods designated. Marketing seasons for individual crops overlap, and weather frequently disturbs normal harvesting schedules. Consequently, the classifications employed are frequently less precise than the dates indicate.
