POULTRY MARKET STATISTICS

1970

Annual Summary of Market Statistics Collected and Compiled by the Dairy and Poultry Market News Branch

PREFACE

An average price is computed by dividing the sum of the mid-points of price ranges reported during the period by the number of price ranges during the period.

A weighted average price is computed by dividing the total value of the sales during the period by the total number of units sold during the period.

An average price for a year is the mean of the twelve monthly averages.

A monthly average price is not computed when a price is not reported for five or more consecutive trading days.

A yearly average price is not computed when an average price is not reported for one or more months.

CONTENTS

<sup>1</sup> Eggs purchased from farmers as reported by commercial egg handlers.

<sup>2</sup> Deliveries to egg breakers as reported by commercial egg handlers.

<sup>3</sup> Number of cases reported by commercial egg handlers is on basis of matched plants reporting in both current week and previous week; and current week and same week last year.

- <sup>1</sup> Includes Los Angeles, Ventura, Orange, San Bernardino and Riverside counties.  
<sup>2</sup> Weighted according to volume and price reported.  
<sup>3</sup> Puget Sound area south to Chehalis.  
<sup>4</sup> Includes Alabama, Georgia, Mississippi and Tennessee.  
<sup>5</sup> Not computed because of insufficient price data.

<sup>1</sup> The nine cities are Chicago, Cleveland, Detroit, Los Angeles, New York, Philadelphia, Pittsburgh, St. Louis and San Francisco.

<sup>2</sup> The 9-city average price is computed by weighting by loads the U. S. Grade A and plant grade sales for each of the nine cities indicated and weighting the city averages by their metropolitan area population.

<sup>3</sup> Revised.
