A Statistical Summary

ECONOMIC RESEARCH SERVICE / U.S. DEPARTMENT OF AGRICULTURE

ABSTRACT

Data on the number of formula feed establishments, physical output, methods of disposition, rated weekly capacity, and quantities of various ingredients used to manufacture livestock and poultry feeds in the United States in 1969 are presented. Production is shown for primary and secondary feed manufacturing. Production of formula feed from primary manufacturing is further divided into complete, supplement, and premix classes. Average distances are given for shipments of feed ingredients from principal suppliers to feed mills, and for shipments of formula feeds from the feed mills to the users, as well as the modes of transportation used.

Keywords: Formula feed, feed manufacturing, feed mill capacities, marketing channels, transportation, feed ingredients.

Washington, D. C. 20250

May 1972

THE FORMULA FEED INDUSTRY, 1969

A Statistical Summary

by

Earl F. Hodges, George C. Allen, and Gary A. Davis
Agricultural Economists, Farm Production Economics Division

This statistical summary presents selected data from a mail survey of all known U.S. feed manufacturing establishments that produced 1,000 tons or more of formula feed in 1969, whether they mill feed for sale, for use in their own feeding operations, or for custom grinding and mixing.^{1/} The data were obtained for civil defense purposes, and for descriptive and economic analysis of the industry.

The survey was made jointly by the Economic Research Service and the Agricultural Stabilization and Conservation Service (ASCS), which has departmental responsibility for emergency and disaster preparedness under provisions of the Defense Production Act of 1950, as amended. The Economic Research Service prepared this statistical summary. The mailing list was developed from a register of mills kept by the Food and Drug Administration (FDA). ASCS updated and expanded the FDA list, working through State and county ASCS offices. ASCS also helped get replies from individual firms that delayed mailing their responses.

The Market Research Committee of the American Feed Manufacturers Association reviewed the questionnaire and helped to word the questions to conform with operating records generally kept for feed mill operations.

The purpose of this summary is to make the basic data available because of their permanent value to the industry. These data present a picture of the entire formula feed industry in 1969. They also serve as a benchmark by which census and other surveys of any part of the industry can be related to the total industry. This is the first time the entire formula feed industry has been surveyed. The relationships portrayed may continue to reflect the industry for several years. The data were adjusted and expanded where necessary to represent 100 percent of the industry. Data in this summary therefore supersede corresponding data contained in the Preliminary Report.^{2/} The preliminary data, although nearly complete, had not been adjusted for incomplete reporting on some questions.

^{1/} Robert W. Schoeff, Kansas State University, was instrumental in identifying the need for a survey of all establishments producing formula feed in the United States.

^{2/} Hodges, Earl F., Allen, George C., and Davis, Gary A. The Formula Feed Industry in 1969, A Preliminary Report. U.S. Dept. Agr., Econ. Res. Serv., ERS-494, Nov. 1971.

The following definitions and descriptions are used:

1. A feed-milling establishment usually consists of a stationary mill operating at a single location together with any mobile mills based at that location. It may also consist of one or more mobile mills not associated with a stationary mill but based at one location. An establishment is not necessarily the same as a business firm, which may include a number of establishments. The feed-milling activities of establishments are classified as (1) primary feed manufacturing and (2) secondary feed manufacturing.

2. Primary feed manufacturing is processing and mixing individual feed ingredients, sometimes with the addition of a premix (described below) at a rate of less than 100 pounds per ton of finished feed. Examples of specific feed ingredients are feed grains, mill byproducts, oilseed meals, and animal proteins.

3. Secondary feed manufacturing is processing and mixing one or more ingredients with formula feed supplements. Supplements are usually used at a rate of 300 pounds or more per ton of finished feed, depending on protein content of the supplement and percentage of protein desired in the finished feed.

4. Formula feeds contain two or more ingredients that are processed or mixed according to specifications. Total volume of formula feeds in this survey includes customer-owned grains that have been processed and mixed.

In this report, feeds from primary manufacturing are also grouped into complete feeds, supplements, and premixes.

5. Complete feeds contain all nutrients needed in the nonroughage portion of the diet by the kind of livestock and poultry for which the feed is designed. Some complete feeds may contain processed roughages.

6. Supplements are formula feeds used with other feed ingredients to improve the nutritive balance of the diet. They are intended to be fed separately in controlled amounts, or offered free-choice as a dietary supplement to other feeds, or mixed with other ingredients to formulate a complete feed. Supplements used in secondary manufacturing are first counted in primary manufacturing and are double-counted when they are included with the tonnage of all manufactured feed.

7. Premixes are formulations of one or more microingredients--such as vitamins, trace minerals, or drugs--mixed with a carrier. A premix is used to distribute microingredients evenly throughout a formula feed. Premix is usually added at a rate of less than 100 pounds per ton of finished feed. It represents a very small percentage (less than 1 percent) of the total quantity of formula feeds. Premix tonnage may be counted twice in formula feed tonnage: first in primary manufacturing, and second if used in complete or supplement feeds by a feed manufacturer.

8. Feeding own animals includes formula feed produced for livestock owned by the feed mill owner. It also includes feed fed to a feed manufacturer's livestock or poultry under contract arrangements on farms of contracting farmers.

9. Custom feeding is the business of feeding livestock belonging to others, usually in a large-scale feedlot. The owner of the livestock pays for the feed, plus a fee for caring for the animals.

10. Custom grinding and mixing is grinding customer-owned feed ingredients. It usually includes mixing supplements with them. This is mainly a service provided to farmers feeding their own animals. However, toll milling (milling performed for other feed manufacturers) was included in this category.

1/ SUMS OF NUMBERS OF ESTABLISHMENTS ARE GREATER THAN SHOWN IN THE TOTALS, BECAUSE MANY ESTABLISHMENTS USE MORE THAN ONE INGREDIENT.

2/ DATA NOT GIVEN TO AVOID DISCLOSURE OF INDIVIDUAL OPERATIONS.

1/ SUMS OF NUMBERS OF ESTABLISHMENTS ARE GREATER THAN SHOWN IN THE TOTALS, BECAUSE MANY ESTABLISHMENTS MANUFACTURE MORE THAN ONE TYPE OF FEED.

2/ DATA NOT GIVEN TO AVOID DISCLOSURE OF INDIVIDUAL OPERATIONS.

Table 4b.--Complete feed from primary manufacturing--Production of establishments where feed manufacturing was the major gross income source,
by type of feed, by States and regions, 1969

State and region	(Establishments producing 1,000 tons or more of formula feed)								Total
	Starter-grower, layer- breeder	Broiler	Turkey	Dairy	Beef and sheep	Hog	All other		
	Tons	Tons	Tons	Tons	Tons	Tons	Tons	Tons	Tons
