VEGETABLES FOR FRESH MARKET

Revised Estimates, By Seasonal Groups and States, 1964 through 1970

Acreage, Production, and Value

In this publication, the Crop Reporting Board presents revised official estimates of acreage, production, and value of the principal fresh market vegetables, melons, mint for oil, and strawberries by seasonal groups in the major producing States, including Hawaii for the years 1964-70 and Alaska, 1964-68.

These estimates continue the series published in U. S. Department of Agriculture Statistical Bulletin No. 126, "Commercial Vegetables for Fresh Market, Acreage, Production, and Value, 1939-50," Statistical Bulletin No. 212, "Vegetables for Fresh Market, Acreage, Production, and Value, 1949-55," Statistical Bulletin No. 300, "Vegetables for Fresh Market, Acreage, Production, and Value, 1954-59," and Statistical Bulletin No. 412, "Vegetables for Fresh Market, Acreage, Production, and Value, 1959-65." Vegetable estimates for 1939-70 related to total commercial fresh market production of these crops in the States are included. Fresh market vegetable estimates published by the Department for 1918-38 are not necessarily comparable with estimates for 1939 to date. In the earlier period, estimates were confined primarily to well-recognized commercial areas from which substantial quantities were shipped--usually by rail--to distant terminal markets. In many States, local-market or market garden areas near large population centers were excluded from these estimates. These omissions make the 1918-38 series less complete than the 1939-70 series in many States.

The term "fresh market" has a dual meaning when it is used in describing vegetable estimates. In a strict sense, it applies to the fresh-market proportion of a group of crops which also have a long history as processing vegetables. This group includes asparagus, snap beans, green lima beans, beets, cabbage for kraut, sweet corn, cucumbers for pickles, green peas, spinach, and tomatoes. The Board publishes separate estimates of acreage, production, and value for the quantities of these vegetables grown for sale to commercial processors.

The term "fresh market" also describes a group of vegetables and melons which were formerly grown exclusively for sale to consumers in fresh form. In recent years, various quantities of crops such as artichokes, broccoli, brussels sprouts, carrots, cauliflower, celery, garlic, kale, onions, and green peppers have been used for processing, and this production is included in the Department's "Fresh Market" estimates. These commodities are not included in the Board's estimates of processing vegetables because it is not practical to determine processors' purchases until the end of the harvest season. Since such a large proportion of these vegetables is purchased on the open market, it is more practical to estimate total production in advance of and during the harvest season. Utilization estimates for these crops have not been published.

SEASONAL GROUPS AND SUBGROUPS USED FOR VEGETABLE AND MELON CROPS
(Dates refer to period of most active harvest)

| <u>Classifications Most Commonly Used</u> | |
|---|-------------------------------------|
| Winter: January, February, March | Early Summer: July 1-August 15 |
| Spring: April, May, June | Late Summer: August 16-September 30 |
| Early Spring: April 1-May 15 | Fall: October, November, December |
| Late Spring: May 16-June 30 | Early Fall: October 1-November 15 |
| Summer: July, August, September | Late Fall: November 16-December 31 |

| <u>Classifications Used For Certain Short-Season Crops</u> | |
|--|------------------------|
| Early Spring: April | Early Summer: July |
| Midspring: May | Midsummer: August |
| Late Spring: June | Late Summer: September |

The seasonal patterns of harvest in all States do not correspond exactly to the periods designated. Marketing seasons for individual crops overlap, and weather frequently disturbs normal harvesting schedules. Consequently, the classifications employed are frequently less precise than the dates indicate.

In this publication, the volume of vegetables sold for fresh market use is valued at F.O.B. shipping point, except garlic, for which value per unit is reported annually on a field run basis at the packinghouse door. The volume sold for processing is valued at the processing plant door--i.e., "Equivalent returns at packinghouse door." For vegetables sold both for fresh consumption and for processing, total value is the sum of the values for both types of use. Per unit value is the quotient derived by dividing total value by total quantity. "Per unit value" is not in general a "price" and is not typically used for parity purposes, except where one or the other type of utilization is negligible. Except for late summer onions and New York cabbage, production items relate to production of value.

"Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices, shortage of farm labor, and other economic factors. Planted acreage in this report includes, in addition to acreage for harvest, acreage lost or abandoned due to natural causes and acreage abandoned prior to reaching maturity because of economic conditions. Acreage lost and replanted to the same crop early enough to be harvested in the season for which it was originally intended is counted only once. Acreage lost and replanted to the same crop for harvest in a later season is considered to have been planted in both seasonal classifications but is included as acreage for harvest in the second season only. Acreage lost and replanted to another vegetable crop is included as planted acreage in estimates for both crops but as acreage harvested for the second crop only. Estimates of both planted and harvested acreage published for asparagus and strawberries include only bearing acreage and exclude nonbearing acreage planted for harvest in future marketing seasons. Value is for the crop year and does not correspond to calendar year income.

Estimates contained in this publication are based primarily on information and data secured by State Agricultural Statisticians from thousands of growers and others associated with the production and marketing of vegetables and related crops. Data secured from other public agencies on the acreage, movement, and sale of these crops are also used. At 5-year intervals, the Bureau of the Census takes its Census of Agriculture, and these data are considered in establishing acreage levels in Census years. Estimates for 1964-70 have recently been reviewed using Census acreage data and other material which has become available since the original estimates were prepared, and revisions of individual estimates have been made where necessary.

Detailed estimates of acreage, production, and value of 27 crops grown in principal producing States, shown on succeeding pages and included in the regular reports issued by the Department, provide basic statistics for about 85 percent of the national commercial production of vegetables and melons grown primarily for fresh market sale. Estimates of total commercial vegetable and melon production for the United States are included in the appendix of this report.

Table 1. Principal vegetables and melons for fresh market:
Acres, production, and value, United States, 1964-70 1/

| Year and crop | Acres | | Production | Value |
|-----------------------------|-----------|-----------|------------|---------------|
| | Planted | Harvested | | |
| 1964 | | Acres | 1,000 cwt. | 1,000 dollars |
| Vegetables: | | | | |
| Artichokes | 8,700 | 8,700 | 566 | 5,704 |

TABLE II. CABBAGE FOR FRESH MARKET AND PROCESSING
ACRES, YIELD, PRODUCTION AND VALUE 1964-70 CONTINUED

FOOTNOTES

1/ Last year of estimate for Early Summer. Combined with Early Fall beginning in 1968.

2/ Last year of estimate for Late Summer. Combined with Early Spring beginning 1969.

* Excludes the following quantities not harvested or not marketed because of economic conditions (hundredweight): 1964, Winter, Florida 277,000, Arizona 120,000; Early spring, Georgia 20,000; Late spring, North Carolina 85,000, Alaska 200 and Hawaii 5,000. 1965, Winter, Florida 44,000, Arizona 48,000; Late spring, Virginia 15,000; Early Fall, N. Y. Upstate 161,000, Michigan 34,000 and Hawaii 3,000. 1966, Winter, Florida 133,000; Early Spring, South Carolina 60,000; Late Spring, North Carolina 60,000 and Hawaii 5,000. 1967, Late Summer, North Carolina 54,000, Colorado 24,000; Early Fall, N. Y. Long Island 16,000, N. Y. Upstate 318,000; Late Fall, Virginia 8,000. 1968, Late Spring, Virginia 60,000, North Carolina 83,000 and Hawaii 1,000. 1969, Late Spring, Virginia 60,000 and North Carolina 75,000. 1970, Early Fall, N. Y. Upstate 180,000.

** Last year of estimate.

Includes the following quantities of the early fall storage crop in New York, lost because of shrinkage and waste, and excluded in computing value (Hundredweight): 164,000 in 1964; 270,000 in 1965; 148,000 in 1966; 200,000 in 1967; 191,000 in 1968; 202,000 in 1969, and 352,000 in 1970.

APPENDIX

This table summarizes revised estimates of total U. S. vegetable production for fresh market and processing and also melon production for the years 1964-70. A comparable series beginning with estimates for 1919 is given in U. S. Department of Agriculture Statistical Bulletin No. 212, issued in June 1957, Statistical Bulletin No. 300, issued in December 1961, and Statistical Bulletin No. 412, issued in August 1967. Data presented here supersede estimates given in prior annual series.

Estimates of fresh market vegetables and melons, as summarized here, include production in all major producing States plus production in minor States. As a result, the national total shown exceeds the sum for major producing States as listed in detailed reports of production by seasonal groups. Production estimates of fresh market vegetables are generally considered to include vegetables grown for sale to consumers in an unpreserved state. However, estimates of fresh production of artichokes, broccoli, brussels sprouts, carrots, cauliflower, celery, garlic, kale, onions, and green peppers include various amounts utilized for processing; quantities used for dehydration are also included in estimates of fresh market production.

U. S. production estimates of minor vegetables are also shown. These totals include production of crops which is not given in the regular program of reports for individual items. Represented in this group are chinese cabbage, swiss chard, collards, daikon, dandelion greens, mustard greens, turnip greens, horseradish, kohlrabi, okra, green onions, parsley, parsnips, field peas, pumpkins, radishes, rhubarb, rutabagas, squash, turnips, watercress, and 20 other minor crops.

Table 40. Total commercial production of vegetables and melons, United States, 1964-70 1/

| Crop | 1964 | 1965 | 1966 | 1967 | 1968 | 1969 | 1970 |
|--|------------|------------|------------|------------|------------|------------|------------|
| 1,000 cwt. | | | | | | | |
| FRESH MARKET | | | | | | | |
| Vegetables | | | | | | | |
