CHANGES IN FARM PRODUCTION AND EFFICIENCY

Donald D. Durost and Evelyn T. Black

Abstract

Although U.S. agriculture in 1976 was plagued by high temperatures and dry soils for most crops, farm output rose 3 percent above the 1975 record high and inputs used increased by 1 percent. Cropland used for crops increased 2 million acres and crop production per acre equaled the 1975 level. Fertilizer use reached a new record high, rising 18 percent. Tractors and some machinery numbers declined. Hours of labor for farmwork also continued a long-term decline, decreasing 3 percent from 1975.

Key words: Farm output, inputs, cropland, fertilizer, machinery, and labor.

:
: Note changes in the index series for farm output, farm inputs, :
: and labor productivity. Differences in the farm output series :
: are due to rounding, and in correcting splicing errors for :
: some regional commodity production groups. Labor productivity :
: series are affected by the above changes. New weights were :
: incorporated in the farm input series, resulting in changes. :
:

PREFACE

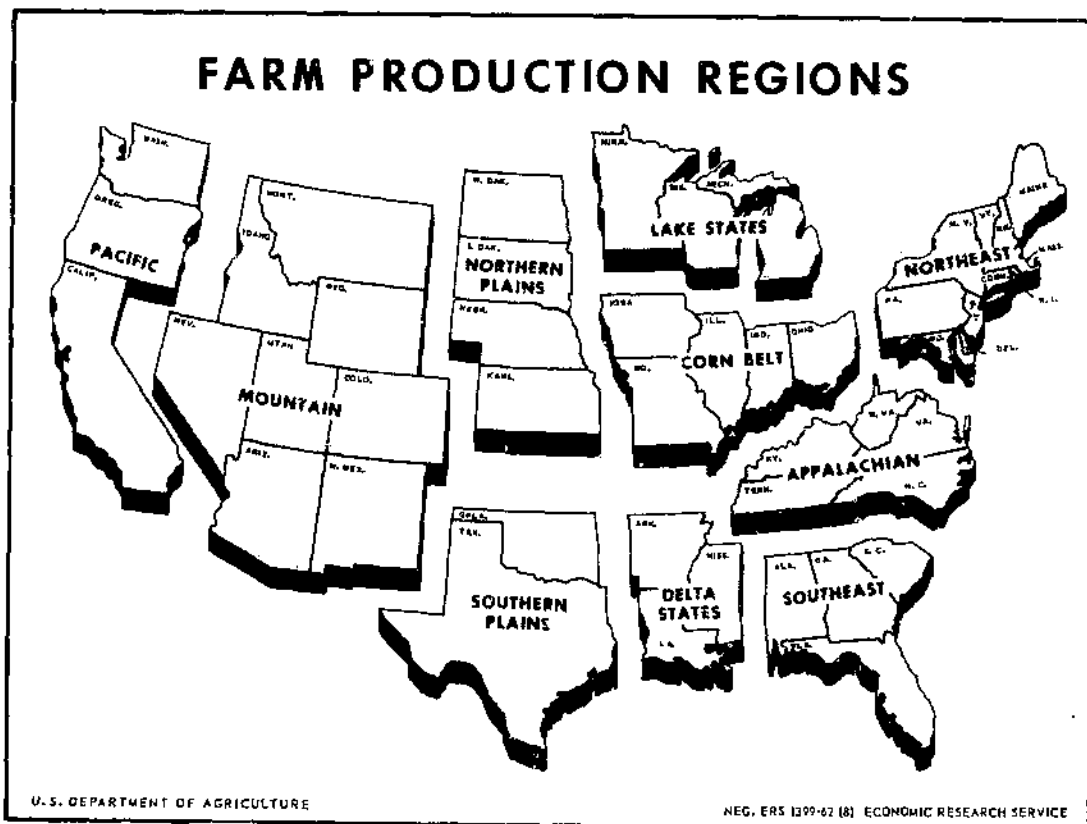

This publication contains all historical data for the major statistical series on farm production, production inputs, and efficiency. It also provides in one place the latest information for appraising changes in production, changes in farm inputs and practices, improvements in labor productivity, and progress in farm mechanization.

For a description of the methods used in developing the series shown, see Major Statistical Series of the U.S. Department of Agriculture, How They Are Constructed and Used, AH-365, Vol. 2, Agricultural Production and Efficiency, 1970.

Data for the 10 farm production regions, formerly published separately as supplements to this publication, have been incorporated as part of this issue. For States included in each region, see map below.

This publication was prepared under the general direction of Donald D. Durost and compiled by Evelyn T. Black. The following persons may be contacted for more information on these subjects:

Farm output--Sandra R. Wilkins and Donald D. Durost, (202) 447-5457
Hours of farmwork--Evelyn T. Black and Donald D. Durost, (202) 447-7147
Farm inputs--Rachel B. Evans and Donald D. Durost, (202) 447-5457
Cropland used for crops--H. Thomas Frey, (202) 447-8320
Farm machinery--Theodore Eichers, (202) 447-6620
Fertilizer--David N. Harrington, (202) 447-5457

CHANGES IN FARM PRODUCTION AND EFFICIENCY

National Economic Analysis Division

Economic Research Service

HIGHLIGHTS

Dry soils and high temperatures characterized the 1976 crop season. However, despite large abandonment, harvested acreage was the largest since 1955. Yields were held to 1975 levels, but record crop output was attained.

Total farm output in the United States was 3 percent above the 1975 record and 23 percent above a decade earlier (table 1).

Livestock production on farms increased 4 percent from 1975. Hog production was up 8 percent, while output of cattle and calves rose 2 percent. Dairy products advanced 5 percent to the highest level since 1965. Poultry and egg production reached a new high, 7 percent above 1975.

Crop production rose 1 percent overall. However, the change in production was not evenly distributed among crops. Feed grain production set a new record, exceeding the previous year's output by 4 percent. Cotton, fruits, and vegetables were the only other groups to exceed the previous year's levels. Oil crop production was down 15 percent as harvested soybean acreage dropped sharply and yields declined 3 bushels. Food grains declined slightly--gains in wheat production were offset by lower rice and rye output.

Regional farm output in 1976 declined in the Lake States and Northern Plains (tables 2-11). All other regions set new record farm output levels, except for the Delta States which just missed equaling the record 1972 level.

Livestock production increased in all regions except the Mountain States. New records were attained in the Northeast, Southeast, Delta, and Pacific regions.

Total crop production in 1976 equaled or exceeded the 1975 output in all regions except the Lake States, Corn Belt, and Northern Plains. These were the regions particularly hard hit by the dry soils and high temperatures. Record crop output was attained in the Appalachian, Southeast, Southern Plains, and Mountain regions. Output in the Pacific region matched the 1975 record.

Harvested crop acreage in 1976 rose to 338 million (table 12), up slightly from 1975. Major acreage increases occurred in corn, cotton, rice, other spring wheat, dry edible beans, and potatoes. Soybean acreage declined 4.3 million acres, the largest decline for any crop.

The cropland required to produce exports in 1976 declined 4 million acres to 96 million. This was the first decline since 1971 but still was equivalent to 28 percent of total harvested acreage. Food grains, chiefly wheat, accounted for 33 percent of the export acres. Oil crops accounted for 30

percent; feed grains, 24 percent; cotton, 5 percent; and all other products, 7 percent.

Cropland used for crops totaled 370 million acres in 1976, an increase of 2 million over 1975 (table 13). The national increase reflected increases in the Northeast, Lake States, Corn Belt, Appalachian, Southeast, Delta States, and Pacific regions. A decrease occurred in the Southern Plains region, but there was little change in the Northern Plains and Mountain regions (tables 14-23). These changes were sufficient to affect the indexes of cropland used for crops for 8 of the 10 farm production regions (table 24).

Crop production per acre of cropland used in 1976 equaled the previous year's level (table 25). Yields for important crops such as corn, barley, rice, cotton, and tobacco increased. However, these increases were offset by lower yields for sorghum, wheat, soybeans, and hay.

Crop production per acre reached a new high only in the Mountain region but was greater than in 1975 in the Appalachian and Southern Plains regions. Crop production per acre in the Corn Belt was off slightly, but it was the lowest in nearly two decades in the Delta States and the lowest in a decade in the Lake States.

Fertilizer use increased 18 percent to a record high of 20.8 million tons of nitrogen, phosphate, and potash in 1976. This moved consumption back on the trend after falling short by about 16 percent in 1975 (table 26). Mid-April 1976 prices for fertilizer were as much as 28 percent below year-earlier levels. The recovery in use came as U.S. farmers responded to higher crop-fertilizer price ratios by increasing purchases of plant nutrients, fertilizing more acres, and increasing application rates.

Nitrogen applications increased 20 percent in 1976, while phosphate and potash rates were up 16 and 17 percent, respectively. Similar gains were recorded in primary plant nutrient usage in most crop production regions (tables 27-29).

Application rates of the three primary plant nutrients on corn for grain, cotton, soybeans for beans, and all wheat were up in 1976--except for nitrogen applied on soybeans, which dropped slightly. Nitrogen applied per acre of corn, wheat, and cotton was up 21, 4, and 11 percent, respectively. Corn received 16 percent more phosphate and potash in 1976 than the previous year. U.S. farmers also increased lime application about 22 percent to a record 38 million tons of stone.

Numbers of tractors and some machinery items on farms, including cornpickers and hay balers, continued a long-term decline (table 30). However, motor truck, combine, and forage harvester numbers were up somewhat as 1977 began. Farm tractor numbers were estimated at 4.40 million as of January 1, 1977, down from 4.43 million a year earlier. Cornpicker numbers were down from 610,000 on January 1, 1976, to 605,000 on the same date in 1977. Self-propelled combines were up from 527,000 in 1976 to 535,000 in 1977.

The 1974 Census of Agriculture indicates that tractor and some other farm machinery numbers dropped less than expected from 1970 to 1975. Inventories of a few machinery items and of motor trucks increased during this period. Therefore, tractor and machinery numbers were revised for the 1971 to 1976 period to reflect these differences.

Although farm tractor numbers were down, tractor size continued to increase, with total horsepower estimated at 232 million as of January 1, 1977. The average size of tractors on farms increased from 35 horsepower in 1963 to 53 horsepower in 1977. New units sold increased from an average size of 55 horsepower in 1963 to over 100 horsepower in 1976.

Sales of tractors were down again in 1976 but not as much as in the previous year (5 percent compared with 7 percent). Sales of other machinery items in 1976 were generally unchanged or down slightly from the previous year. Hay baler and mower conditioner sales in 1976 were off 15 and 5 percent, respectively, from 1975.

While machinery unit sales were unchanged or down, prices continued to climb in 1976. Prices of small wheel-type tractors (30-39 horsepower) as of September 15, 1976, were up 7 percent from the same date in 1975. Prices of larger tractors were up 10 to 12 percent, and most other machinery prices were 10 to 15 percent higher. Farm machinery prices as of June 15, 1977, were generally up about 10 percent over year-earlier levels. But increases were expected to moderate for the remainder of 1977 and into 1978.

Hours of labor used on U.S. farms in 1976 declined 3 percent from 1975 (tables 31 and 32). A total 5.1 billion hours were recorded for all farmwork. Of this, 2.8 billion hours were spent on the preharvest and harvest activities of crops, 1.6 billion hours were required for the care of livestock, and the remaining 0.7 billion hours were utilized for overhead and miscellaneous farm tasks.

Labor used on all crop production in 1976 was slightly down from a year earlier. Changes in the composition of crop acreage along with increased labor efficiency were responsible.

Labor used on feed grains increased more than 2 percent and labor used on food grains rose 1 percent. The largest increase occurred in cotton, up 22 percent. Labor used on all other crops decreased, with declines ranging from 2 percent for hay and forage production to 10 percent for oil crops. Less acreage and production of soybeans were the contributing factors for the large decline in oil crops.

Hours of labor in 1976 required for the production of all classes of livestock decreased 5 percent. For milk cows, the decline was more than 6 percent, while it was 5 percent each for meat animals and poultry.

Hours of labor declined in all regions except the Delta States (tables 33-43) where hours increased 4 percent because of the large acreage and production of cotton. The largest decline occurred in the Lake States region, down 6 percent, followed by the Northeast region, down 5 percent. Other

declines ranged from 4 percent in the Northern Plains to 1 percent in the Southeast region.

Farm labor productivity in 1976 was up 6 percent over 1975. Labor productivity climbed 36 percent since 1970 (table 44).

Labor productivity for livestock in 1976 gained 9 percent over 1975. As in 1975, labor for all groups of livestock shared in the increased productivity. Increases for the respective groups were: milk cows, over 13 percent; poultry, 12 percent; and meat animals, 11 percent.

Labor productivity for all crops increased 2 percent, with increases registered for most crop groups. These were 17 percent for fruits and nuts, 10 percent for vegetables, over 4 percent for tobacco, 3 percent for cotton, and 2 percent for feed grains. Decreases in labor productivity occurred in three crop groups. The largest decrease was in oil crops, down 6 percent, followed by hay and forage, down 3 percent, and food grains, down over 2 percent.

Production per hour increased in every region as it did in 1975 (tables 45-54). The greatest increases occurred in the Northeast, Appalachian, and Southern Plains regions, rising 10, 9, and 8 percent, respectively. The Northern Plains region had the smallest increase in labor productivity, 2 percent, while the Delta States and Lake States regions each had a 3-percent increase.

Total farm inputs used in 1976 increased over 1 percent from 1975 (table 55). Although total inputs have remained essentially unchanged in recent years, changes in the mix have occurred. Farmers have substituted more productive inputs for less productive ones. Noteworthy is the continuing replacement of labor inputs by capital inputs such as mechanical power and machinery.

Total farm labor inputs decreased 2 percent from a year earlier and 22 percent from 1967. Labor now accounts for 16 percent of all inputs, compared with 21 percent in 1967. Rapid substitution of capital for labor was encouraged as farm wage rates rose at a faster rate than prices for capital inputs.

Agricultural chemical use in 1976 increased 14 percent, chiefly because of the large purchases of fertilizer. Lower fertilizer prices and favorable crop prices encouraged farmers to plant more acres and to use more agricultural chemicals. Agricultural chemicals accounted for 10 percent of all inputs compared with 7 percent in 1967. Feed, seed, and livestock purchases increased 7 percent, reflecting increased livestock production and crop acreage.

After 3 years of rapid increases, inputs of mechanical power and machinery rose by only 1 percent. This input group is the largest, accounting for 31 percent of the total in 1976.

Farmers continued to use more purchased inputs. This category of inputs rose 6 percent. Nonpurchased inputs, such as unpaid family and operator labor, were down 2 percent, continuing a 25-year trend. Purchased inputs accounted for 55 percent of all inputs.

Farm output per unit of input for the United States increased over 1 percent (tables 66-67), reflecting fewer idled resources such as land and more efficient use of resources in most of the major farming regions. These conditions resulted in record output per unit of input for the United States and for 8 out of the 10 farming regions. The Lake States and Northern Plains were the only regions to show declines, and the Corn Belt matched its 1975 record.

1/ The index number of farm output in some instances may be outside the range of the index number of all crops and the index number of all livestock production. 2/ Horses and mules excluded. 3/ Includes clipped wool, mohair, and for 1950 to date, honey and beeswax. These items are not included in the separate groups of livestock and products shown. 4/ Cattle and calves, sheep and lambs, and hogs. 5/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 6/ Chickens and eggs, commercial broilers, and turkeys. 7/ Includes hay seeds, pasture seeds and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens were excluded after 1964. 8/ Corn for grain, oats, barley, and sorghum grain. 9/ All hay, sorghum forage, corn silage, and for 1950 to date, sorghum silage. 10/ All wheat, rye, and rice. Buckwheat was excluded after 1964. 11/ Potatoes, sweetpotatoes, dry edible beans, dry field peas, truck crops for processing, and truck crops for fresh market. 12/ Fruits, berries, and tree nuts. Citrus production is on year of harvest, 1960 to date. Earlier years on year of bloom. 13/ Sugarbeets, sugarcane for sugar and seed, sugarcane sirup, and maple sirup. 14/ Soybeans, peanuts for nuts, cottonseed, flaxseed, and for 1950 to 1964, tungnuts and peanuts hogged. 15/ Preliminary.

^{1/} Horses and mules excluded. ^{2/} Includes clipped wool, mohair, honey, and beeswax. These items are not included in the separate groups of livestock and livestock products shown. ^{3/} Cattle and calves, sheep and lambs, and hogs. ^{4/} Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. ^{5/} Chicken eggs, commercial broilers, chickens, and turkeys. ^{6/} Includes hay seeds, pasture seeds, and cover-crop seeds; and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens were excluded after 1964. ^{7/} Corn for grain, oats, barley, and sorghum grain. ^{8/} All hay, sorghum forage, sorghum silage, and corn silage. ^{9/} All wheat, rye, and rice. Buckwheat was excluded after 1964. ^{10/} Potatoes, sweetpotatoes, truck crops for processing, and truck crops for fresh market. ^{11/} Fruits, berries, and tree nuts. ^{12/} Sugarbeets, sorghum sirup, and maple sirup. ^{13/} Due to small quantity of cotton produced, the index is not shown separately but is included in total crop production. ^{14/} Soybeans, flaxseed, and cottonseed. ^{15/} Preliminary.

^{1/} Horses and mules excluded. ^{2/} Includes clipped wool, honey and beeswax. These items are not included in the separate groups of livestock and livestock products shown. ^{3/} Cattle and calves, sheep and lambs, and hogs. ^{4/} Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. ^{5/} Chicken eggs, commercial broilers, chickens, and turkeys. ^{6/} Includes hay seeds, pasture seeds, and cover-crop seeds; and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens excluded after 1964. ^{7/} Corn for grain, oats, barley, and sorghum grain. ^{8/} All hay, sorghum forage, sorghum silage, and corn silage. ^{9/} All wheat and rye. ^{10/} Potatoes, sweet-potatoes, truck crops for processing, and truck crops for fresh market. ^{11/} Fruits, berries, and tree nuts. Citrus production is on year of harvest 1960 to date. Earlier years on year of bloom. ^{12/} Sugarcane for sugar and seed, sugarcane sirup, and sorghum sirup. ^{13/} Soybeans, peanuts for nuts, and cottonseed. Peanuts hogged and tungnuts were excluded after 1964. ^{14/} Preliminary.

^{1/} Horses and mules excluded. ^{2/} Includes clipped wool, mohair, honey, and beeswax. These items are not included in the separate groups of livestock and livestock products shown. ^{3/} Cattle and calves, sheep and lambs, and hogs. ^{4/} Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. ^{5/} Chicken eggs, commercial broilers, chickens, and turkeys. ^{6/} Includes hay seeds, pasture seeds, and cover-crop seeds; and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens were excluded after 1964. ^{7/} Corn for grain, oats, barley, and sorghum grain. ^{8/} All hay, sorghum forage, sorghum silage, and corn silage. ^{9/} All wheat and rye. ^{10/} Potatoes, sweetpotatoes, dry edible beans, dry field peas, truck crops for processing, and truck crops for fresh market. ^{11/} Fruits, berries, and tree nuts. Citrus production is on year of harvest 1960 to date. Earlier years on year of bloom. ^{12/} Sugarbeets. ^{13/} Peanuts for nuts, flaxseed, and cottonseed. ^{14/} Preliminary.

¹ Data as of January 1. Base data are derived primarily from Agricultural Census reports. For years not covered and items not reported in the Agricultural Census, the following information sources were used to derive estimates: *Current Industrial Reports* of the Census Bureau (formerly *Facts for Industry*), annual registrations of motor vehicles, results of surveys, changes in farm income, and estimated discard rates. ² Includes wheel and crawler type tractors. ³ Data for 1975 and after are for self-propelled combines only. ⁴ Includes cornheads for combines. ⁵ Does not include large balers, over 200 pounds. ⁶ Data for 1976 and after do not include flail-type forage harvesters. ⁷ Census of Agriculture year. ⁸ Average of 1920-1924 and 1930-1934. ⁹ Revised. ¹⁰ Preliminary.

¹ Hours include labor used on crops, livestock, and overhead. Hours for horses and mules, and farm gardens were excluded after 1964. ² Includes horses and mules prior to 1950; includes wool and minor livestock which are excluded from separate enterprises shown. ³ Cattle and calves, sheep and lambs, and hogs. ⁴ Chickens, broilers, and turkeys. ⁵ Includes flaxseed, hay seeds, pasture seeds, and cover-crop seeds; and minor crops which are excluded from separate crops shown. Farm gardens excluded after 1964. ⁶ Corn for grain, oats, barley, and sorghum grain. ⁷ All hay, corn silage, and sorghum forage and silage. ⁸ All wheat, rye, and rice. ⁹ Potatoes, sweetpotatoes, dry edible beans, dry field peas, and truck crops. ¹⁰ Fruits, berries, and tree nuts. ¹¹ Sugarbeets. ¹² Preliminary.

¹ Data computed from unrounded index numbers. ² Preliminary.

Every month Agricultural Outlook brings together and sizes up what is going on in the food and fiber economy and its major components --- commodities, food/marketing, farm inputs, policy, and world agriculture.

So in a single tidy package, Agricultural Outlook gives you the latest on food and fiber, and combines up-to-the-minute facts and forecasts on the agricultural economy with prime statistical indicators to keep you abreast of developments and scope of future uncertainties.

Agribusinessmen, agricultural economists, progressive farmers, and educators depend on Agricultural Outlook. See for yourself. Write for a complimentary copy. That's Agricultural Outlook, JS-111, Room 453, GHI Building, 500 12th Street, S.W., Washington, D.C. 20250. We would welcome you as a subscriber.
