TABLES

All Chickens: Number, value, total value, and classes, United States, December 1, 1970-75	4
All Chickens: Number, value, total value, and classes, by States, December 1, 1970-75	5
Chickens: Number, classes and by States, December 1, 1970-75	7
Hens and Pullets of Laying Age and Potential Layers: By regions, March 1, June 1, September 1, and December 1, 1970-75	14
Egg Production: Average number of layers, eggs per 100 layers, by months, United States, 1970-75	16
Egg Production: Annual average number of layers, eggs per layer, by States, 1970-75	18
Egg Production: By quarters, 1970-75	21
Layers: Average number, by months and by States, 1970-75	24
Eggs: Number laid per 100 layers, by months, by States, 1970-75	36
Egg Production: By months and by States, 1970-75	48
Layers: Number on hand first day of the month, by months and by States, 1970-75	60
Eggs: Number laid per 100 layers, first day of the month, by months and by States, 1970-75	72

CHICKENS AND EGGS

Final Estimates for 1970-75

INTRODUCTION

This publication presents final chicken and egg estimates, including some revisions, made by the Crop Reporting Board (CRB) for the period 1970-75 and continues the official series published in Statistical Bulletin No. 501 issued November 1972. This series includes estimates for December 1 inventory and value of chickens and monthly layers, rate of lay, and egg production. In 1972, the data series for 17 States were changed from monthly to quarterly estimates for layer numbers, rate of lay, and egg production.

Estimates were published on a current basis during 1970-75 based primarily on results of producer surveys. Survey samples included all known large producers and a sample of smaller producers. Lists of producers are updated annually.

Revisions were made only after a thorough review of the original estimates and consideration of new data, including the 1974 Census of Agriculture. Among the check data was information on egg-type chicks hatched, Pullorum-typhoid disease testings, and chicken slaughter. The general level and trends of all indicators collected during the 1970-75 period also were considered. At the national level, revisions were less than 1 percent for all chickens and egg production.

Data for the 1974 Census were collected by mail survey with the request to report inventories as of December 31, 1974. The final published data for the 1974 Census of Agriculture were based on farms with sales of \$1,000 or more (or the equivalent) in contrast to the 1969 Census which used farms with sales of \$250 or more (or the equivalent).

Estimates of average value per head were based on CRB crop and livestock reporters' estimates of average price per head in their localities about December 1 each year. These chicken and egg producers reported the value per head for hens and pullets of laying age and all other chickens. Values per head for each State were weighted together by the number of hens and pullets of laying age and all other chickens. The total value is the weighted average value multiplied by the total number of chickens. In the case of estimates for the United States, the total value is the sum of the State estimates; value per head is derived by dividing the total value by the number of total chickens for the United States.

The number of chickens by classes are estimated on December 1. These estimates are based on survey data relationship of the various classes to layer and total chickens.

CHICKENS AND EGGS
Final Estimates for 1970-75

INTRODUCTION

This publication presents final chicken and egg estimates, including some revisions, made by the Crop Reporting Board (CRB) for the period 1970-75 and continues the official series published in Statistical Bulletin No. 501 issued November 1972. This series includes estimates for December 1 inventory and value of chickens and monthly layers, rate of lay, and egg production. In 1972, the data series for 17 States were changed from monthly to quarterly estimates for layer numbers, rate of lay, and egg production.

Estimates were published on a current basis during 1970-75 based primarily on results of producer surveys. Survey samples included all known large producers and a sample of smaller producers. Lists of producers are updated annually.

Revisions were made only after a thorough review of the original estimates and consideration of new data, including the 1974 Census of Agriculture. Among the check data was information on egg-type chicks hatched, Pullorum-typhoid disease testings, and chicken slaughter. The general level and trends of all indicators collected during the 1970-75 period also were considered. At the national level, revisions were less than 1 percent for all chickens and egg production.

Data for the 1974 Census were collected by mail survey with the request to report inventories as of December 31, 1974. The final published data for the 1974 Census of Agriculture were based on farms with sales of \$1,000 or more (or the equivalent) in contrast to the 1969 Census which used farms with sales of \$250 or more (or the equivalent).

Estimates of average value per head were based on CRB crop and livestock reporters' estimates of average price per head in their localities about December 1 each year. These chicken and egg producers reported the value per head for hens and pullets of laying age and all other chickens. Values per head for each State were weighted together by the number of hens and pullets of laying age and all other chickens. The total value is the weighted average value multiplied by the total number of chickens. In the case of estimates for the United States, the total value is the sum of the State estimates; value per head is derived by dividing the total value by the number of total chickens for the United States.

The number of chickens by classes are estimated on December 1. These estimates are based on survey data relationship of the various classes to layer and total chickens.

ALL CHICKENS: NUMBER, VALUE PER HEAD, TOTAL VALUE, AND CLASSES,
