# $R$ <br> 630.5 u53. 13 \# 594 <br> FARMS AND LAND IN FARMS Final Estimates by States, 1969-75 

Estimates in this publication continue the series of estimates of number of farms and land in farms based on the definition of a farm used since 1959. Under this definition, a farm is defined as any place of 10 or more acres that had annual sales of $\$ 50$ or more of agricultural products, or any place of less than 10 acres that had annual sales of $\$ 250$ or more.

FARMS AND LAND IN r'RRMS
Final Estimates by States, 1969-75

This publication continues the Department of Agriculture's series of official final estimates of number of farms and land in farms. The series began with Statistical Bulletin No. 316 for the years 1910-59 for number of farms and 1950-59 for land in farms, published in June 1962; and No. 507 for the years 1959-70, published in January 1973. These estimates are based on a thorough review of the original annual estimates, consideration of the 5 -year Census of Agriculture data, and survey information gathered by the Crop Reporting Board.

## INFLUENCE OF THE FARM DEFINITION

Estimates from USDA of farm numbers and land in farms reflect the statistical definition of a farm used by the Bureau of the Census, Department of Commerce, for their Census of Agriculture to assure data users of some degree of continuity in comparing estimates from both sources.

The Bureau of the Census is responsible for establishing minimum criteria defining a farm for agricultural census purposes. The definition is developed in cooperation with the Departiment of Agriculture and interested organizations from the public and private sectors.

The farm definition has changed several times since the first agricultural census in 1840, primarily reflecting a changing agriculture. The latest adjustment was in 1974 when a farm was defined as "any establishment from which $\$ 1,000$ or more of agricultural products are sold or normally would be sold during a year." All final reports from the 1974 Census of Agriculture were published in conformance with this definition; number of farms, and land in farms also were published using the 1959 definition.

In 1976, Congress directed that the 1974 farm definition be set aside. Legislation is now pending to create a new, more acceptable definition. Because of this situation, the Department of Agriculture has not used the 1974 definition in estimating number of farms and land in farms in its annual series. USIDA continues to apply the 1959 definition.

Estimates of land in farms represent acreages associated with the number of farms. Estimates of farmland exclude Government-owned land grazed on a fee or permit basis but include land leased for grazing from the Government. This is the same definition as used in the Census of Agriculture.

Preliminary estimated "incompleteness" of the 1974 census count of farms, based on the 1959 farm definition, was 13.9 percent, compared to 15.0 percent in 1969 and 11.1 percent in 1964.
